

PRIMARY 6 PHYSICAL AND HEALTH EDUCATION SCHEME OF WORK

FIRST TERM

Week	Topic	Content
1	Physical Fitness and Body Conditioning I	Components of physical fitness - cardiovascular endurance, muscular strength, muscular endurance, flexibility, body composition; Assessing physical fitness levels; Importance of physical fitness for health; Setting fitness goals
2	Physical Fitness and Body Conditioning II	Cardiovascular exercises - running, jogging, swimming, skipping, cycling; Training principles - frequency, intensity, time, type (FITT); Monitoring heart rate and pulse; Progressive training; Recovery and rest importance
3	Physical Fitness and Body Conditioning III	Strength and muscular endurance training - push-ups, sit-ups, squats, lunges, planks; Proper form and technique; Core strengthening exercises; Upper and lower body exercises; Bodyweight training; Circuit training basics
4	Physical Fitness and Body Conditioning IV	Flexibility and stretching - static stretching, dynamic stretching; Major muscle groups stretching; Warm-up and cool-down routines; Preventing injuries; Balance and coordination exercises; Creating a personal fitness plan
5	MIDTERM EXAMINATION	Assessment of topics covered in weeks 1-4 - theory and practical fitness tests
6	MIDTERM BREAK	Rest and relaxation period
7	Athletics I - Track Events I	Track athletics overview; Sprint techniques - starting position, acceleration, running form, finishing; 100m, 200m, 400m races; Starting blocks usage; Relay

		races - baton passing techniques; 4×100m relay
8	Athletics I - Track Events II	Middle-distance running - 800m, 1500m; Pacing strategies; Breathing techniques; Long-distance running basics; Cross-country running; Marathon introduction; Training for endurance events; Race tactics
9	Athletics I - Hurdles and Specialized Events	Hurdle races - 100m hurdles, 110m hurdles, 400m hurdles; Hurdling technique - approach, clearance, landing; Rhythm and stride pattern; Steeplechase introduction; Race walking basics; Rules and regulations
10	Personal and Environmental Health I	Personal hygiene - daily bathing, oral hygiene, hair care, nail care; Grooming and appearance; Puberty hygiene - menstrual hygiene for girls, body changes; Skin care; Hand washing importance; Disease prevention through hygiene
11	REVISION	Review of all topics covered; Fitness assessments; Athletics practice; Health discussions; Question and answer sessions
12	EXAMINATION	End of term assessment - theory and practical
13	CLOSING	Report card distribution; Vacation assignment; Fitness goals for holiday

PRIMARY 6 PHYSICAL AND HEALTH EDUCATION LESSON NOTES

FIRST TERM

WEEK 1: PHYSICAL FITNESS AND BODY CONDITIONING I

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Define physical fitness in simple terms.
2. List the five components of health-related physical fitness.
3. Mention three benefits of being physically fit.
4. Explain the meaning of body composition.

CONTENT

1. Meaning of Physical Fitness

Physical fitness is not just about being strong or fast. It is about your body being able to work well without getting tired easily. Think of it like this: A fit person is like a well-maintained car that can travel a long distance without breaking down. A fit person can:

- Do their chores (like sweeping, fetching water).
- Play with friends for a long time without feeling too tired.
- Have energy left over for anything unexpected, like running to safety if needed.

2. Components of Physical Fitness

To be truly fit, we need to look at five important parts of our body. Imagine your body is a house. All these parts must be strong for the house to stand properly.

Component	Simple Meaning	Example in Everyday Life
Cardiovascular Endurance	How strong your heart and lungs are. This is your body's engine.	Running to school without stopping to catch your breath. Playing a full football match.
Muscular Strength	How much force your muscles can produce at one	Lifting a heavy bucket of water. Pushing a car that is stuck.

Component	Simple Meaning	Example in Everyday Life
	time.	
Muscular Endurance	How long your muscles can keep working without getting tired.	Carrying your school bag for a long walk home. Doing many push-ups in a row.
Flexibility	How easily your joints can bend and stretch.	Bending down to tie your shoe without pain. Touching your toes easily.
Body Composition	What your body is made of—muscle, bone, fat, and water.	Having a healthy weight, not too thin or too heavy.

3. Importance of Physical Fitness

Being fit is important for your whole life, not just for sports.

- **Health:** It keeps your bones strong and helps you avoid sicknesses like diabetes and heart problems when you grow older.
- **Energy:** You have more power to study, play, and help at home.
- **Mood:** Exercise makes your brain release "happy chemicals" (like endorphins). This reduces stress and makes you feel good.
- **Appearance:** It helps you maintain a healthy weight and posture, so you stand tall and feel confident.

EVALUATION

1. What does it mean to be physically fit? Give one example.
2. Which component of fitness is about how long your heart and lungs can keep working?
3. If someone can lift a very heavy stone once, which component is that? If they can carry a lighter basket for a long walk, which component is that?
4. Why is it good to be flexible?
5. Name two things that can happen if you are not physically fit.

ASSIGNMENT

1. **Written:** In your notebook, list the five components of physical fitness and write one example for each from your daily life.
2. **Practical/Oral:** Ask a family member to help you measure your height and weight. Record it: "My height is ____ cm. My weight is ____ kg."
3. **Observation/Written:** For one day, notice the activities you do that require strength. List three of them (e.g., lifting a chair, carrying a bucket).

WEEK 2: PHYSICAL FITNESS AND BODY CONDITIONING II

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Identify common cardiovascular exercises.
2. Define the FITT principle (Frequency, Intensity, Time, Type).
3. Demonstrate how to locate and count their pulse (heart rate).
4. Explain the importance of recovery and rest after exercise.

CONTENT

1. Cardiovascular Exercises (Exercises for the Heart)

These are activities that make your heart beat faster and your breathing deeper. They are like a workout for your heart muscle, making it stronger.

○ **Examples:**

- Running/Jogging: Around your compound or school field.
- Skipping Rope: A simple and fun exercise.
- Cycling: Riding a bicycle.
- Swimming: If you have access to a pool.
- Dancing: To your favourite music!
- Aerobic Games: Like "Fire on the Mountain" or playing tag.

2. The FITT Principle (Your Exercise Recipe)

How do you know if you are exercising enough? Use the FITT principle as your guide.

- **F - Frequency:** How often do you exercise? Example: 3-5 days a week is good.
- **I - Intensity:** How hard are you working? Example:
 - Light: You can sing while doing it (slow walking).
 - Moderate: You can talk but not sing (brisk walking, slow jogging).
 - Vigorous: You cannot say more than a few words without pausing for breath (fast running, football match).
- **T - Time:** How long is your exercise session? Example: Start with 20-30 minutes.
- **T - Type:** What kind of exercise are you doing? Example: Running (Cardio), Push-ups (Strength), Stretching (Flexibility).

3. Monitoring Heart Rate (Checking Your Body's Engine Speed)

Your pulse is the beat you feel when your heart pumps blood. It tells you how hard your body is working.

- **How to find your pulse:** a. Place your index and middle finger (not your thumb) on the inside of your wrist, below your thumb. b. Press gently. You should feel a gentle thumping.
- **How to count:** Look at a clock with a second hand. Count the beats you feel for 30 seconds. Then multiply that number by 2 to get your heart rate per minute.
- **Resting Heart Rate:** Your pulse when you are sitting quietly. A fit person often has a lower resting heart rate because their strong heart pumps more blood with each beat.

4. Recovery and Rest (The Secret to Getting Stronger)

Exercise creates tiny tears in your muscles (this is normal!). Rest is when your body repairs these tears, making the muscles stronger than before.

- Never skip rest days. Your body needs time to heal.
- Sleep is crucial. Aim for 9-10 hours of sleep as a child. This is when most repairs happen.
- Overtraining (exercising too much without rest) can lead to injuries, tiredness, and sickness.

EVALUATION

1. Why are running and skipping called "cardiovascular" exercises?
2. What does each letter in FITT stand for?
3. If you are jogging and can talk to your friend easily, is that light, moderate, or vigorous intensity?
4. Show the class how to find the pulse on your wrist.
5. Explain why sleeping well is part of becoming fit.

ASSIGNMENT

1. **Practical:** Jog in place for 2 minutes. Immediately find your pulse and count it for 30 seconds. Multiply by 2. Write: "My heart rate after exercise was ____ beats per minute."
2. **Written:** Write the full meaning of FITT. Then, plan your own FITT workout: "I will [Type of exercise] for [Time] minutes, [Frequency] times a week, at [Light/Moderate/Vigorous] intensity."
3. **Reasoning/Written:** Write two reasons why skipping rope is an excellent exercise for the heart and lungs.

WEEK 3: PHYSICAL FITNESS AND BODY CONDITIONING III

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Differentiate between core, upper body, and lower body exercises.
2. Demonstrate the proper form for push-ups and squats.
3. Explain the concept of circuit training.
4. Perform a simple bodyweight workout.

CONTENT

1. Strength and Muscular Endurance Training

You don't need heavy weights to get stronger! You can use your own body weight. These exercises build muscle and help you do tasks for longer.

2. Types of Bodyweight Exercises

Body Part	Exercise	How to Do It Correctly (Key Points)	Common Mistake
Upper Body	Push-ups	1. Hands under shoulders. 2. Body straight like a plank (no sagging hips!). 3. Lower chest to floor, then push up.	Dropping hips or sticking bottom up.
	(Easier: Knee Push-ups)	Do the same, but with knees on the ground.	
Core (Stomach & Back)	Sit-ups/Crunches	1. Lie on back, knees bent. 2. Hands crossed on chest. 3. Lift shoulders off floor, then lower slowly.	Pulling on your neck with your hands.
	Plank	1. On elbows and toes. 2. Keep body perfectly straight from head to heels. 3. Hold for as long as you can.	Letting hips sink down.
Lower Body (Legs)	Squats	1. Stand with feet shoulder-width. 2. Pretend to sit in an invisible chair. 3.	Letting knees cave inwards.

		Keep knees behind toes. 4. Stand back up.	
	Lunges	1. Step one leg forward. 2. Lower hips until both knees are bent at 90°. 3. Push back to start.	Letting front knee go past the toes.

Simple stick-figure diagrams showing correct form for Push-up, Squat, and Plank, with arrows pointing to "straight back", "knees behind toes", etc.

3. Circuit Training Basics (The Exercise Circle)

Circuit training is a fun way to exercise. You move quickly from one exercise to the next with a short rest. It builds endurance and strength at the same time.

- **Example of a Simple Circuit:** a. Jumping Jacks (30 seconds) – for heart b. Squats (10 reps) – for legs c. Push-ups (5-10 reps) – for arms d. Plank (20 seconds) – for core e. Rest (60 seconds) – catch your breath
 - Repeat the circle 2-3 times!

EVALUATION

1. Which muscles do squats mainly work on?
2. What is the most important thing to remember about your body position during a push-up?
3. Describe how to do a proper plank.

4. What is circuit training? Why is it a good way to exercise?
5. If your knees hurt when you squat, what might you be doing wrong?

ASSIGNMENT

1. **Practical/Record:** Do 10 squats every morning for 3 days. Write a sentence each day about how your legs feel (e.g., "Day 1: My legs felt tired. Day 3: It was easier.").
2. **Drawing:** Draw a stick figure showing the correct form for a push-up. Label "Straight Back" on your drawing.
3. **Planning:** Create your own 4-station circuit using exercises you learned. Write it down in order.

WEEK 4: PHYSICAL FITNESS AND BODY CONDITIONING IV

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Define flexibility.
2. Distinguish between static and dynamic stretching.
3. List the benefits of a warm-up and cool-down.
4. Create a simple personal fitness plan.

CONTENT

1. **Flexibility and Stretching** Flexibility is how far you can stretch your muscles and move your joints. Think of your muscles like rubber bands. A new, flexible rubber band stretches easily. An old, stiff one can snap.
 - **Static Stretching:** You stretch a muscle and hold the position for 15-30 seconds. Best done after exercise when muscles are warm.
 - Example: Sitting and reaching for your toes (hamstring stretch). Hold the stretch gently; don't bounce.
 - **Dynamic Stretching:** You stretch while moving. Best done before exercise to prepare the body.
 - Example: Arm circles, walking lunges, high knees.

Static vs. Dynamic Stretching

1. Static Stretch

Static: Held for a sustained period (e.g. 30 seconds). Increases flexibility. Best after exercise.

2. Dynamic Stretch

Dynamic: Continuous movement through a range of motion. Prepares body for activity. Best before exercise.

Two side-by-side images: 1) Child holding a toe-touch (Static). 2) Child doing leg swings (Dynamic).

2. Warm-Up and Cool-Down (The Bookends of Exercise)

- **WARM-UP (5-10 minutes before exercise):**
 - **Purpose:** To gradually increase heart rate, blood flow to muscles, and body temperature. It "wakes up" your body.
 - **What to do:** Light cardio (jogging, jumping jacks) + Dynamic stretching.

- **Why it's important:** Prevents muscle pulls and injuries. Prepares your mind and body for work.
- **COOL-DOWN (5-10 minutes after exercise):**
 - **Purpose:** To gradually lower heart rate and help muscles recover.
 - **What to do:** Light walking + Static stretching.
 - **Why it's important:** Prevents dizziness, reduces muscle soreness the next day, and improves flexibility.

3. Preventing Injuries

- Always warm up.
- Use proper technique (don't sacrifice form to do more reps).
- Wear appropriate footwear (like trainers, not sandals).
- Drink water before, during, and after exercise.
- Listen to your body. Stop if you feel sharp pain.

4. Balance and Coordination

- **Balance:** The ability to control your body's position. Example: Standing on one leg, walking on a straight line.
- **Coordination:** The ability to use different body parts together smoothly. Example: Dribbling a football while running, catching a ball.

EVALUATION

1. When should you do static stretching, and when should you do dynamic stretching?
2. What are two main purposes of a warm-up?
3. Why is it important to cool down after running fast?
4. Give one example of a balance exercise you can practice at home.
5. If you start playing football without warming up, what could happen?

ASSIGNMENT

1. **Planning:** Create a personal 10-minute fitness plan. Include: 1) Warm-up (2 min), 2) Two different exercises (3 min each), 3) Cool-down (2 min). Write it down.

2. **Practical/Demonstration:** Show a family member the "sit-and-reach" (toe-touch) stretch. Explain to them that it's a static stretch.
3. **Written:** List three pieces of clothing or gear you should have to exercise safely (e.g., trainers, comfortable clothes, water bottle).

WEEK 5 & 6: MIDTERM EXAM & BREAK

WEEK 7: ATHLETICS I - TRACK EVENTS I

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Define sprint races.
2. Describe the starting position for a sprint race.
3. Mention the distances covered in short sprints.
4. Explain the basic rules of relay races.

CONTENT

1. Introduction to Track Events

Athletics is the mother of all sports. Track events are running races that happen on an oval-shaped track. They are divided by distance: Sprints (short), Middle Distance, and Long Distance.

2. Sprints (Short Distance - All-Out Speed!)

Sprinters run as fast as they can from start to finish. It's about power and explosion.

- **Distances:** 100m (a straight line), 200m (half the track), 400m (one full lap). The 100m is the shortest and fastest race in the world!
- **Starting Commands:** The starter uses clear commands: a. "On your marks": Get into starting blocks. b. "Get set": Lift your hips up, body tense and ready. c. "Go" or Gunshot: Explode out of the blocks!
- **Technique:** High knee lift, powerful arm drive, leaning forward at the start.

SPRINT START

1. ON YOUR MARKS

Kneeling in blocks.
Hands behind line.
Relaxed.

2. GET SET

Hips raised.
Shoulders over hands.
Engaged muscles.

3. GO!

Powerful push-off.
Low explosive drive.
Max acceleration.

3. Relay Races (The Team Sprint)

Relay is a team event. Four runners work together to carry a baton around the track as fast as possible.

- **Common Race:** 4 x 100m Relay (each runner runs 100m).
- **The Exchange Zone:** This is a 20m box marked on the track. The baton must be passed within this zone. If you pass outside the zone, your team is disqualified.

- **The Baton Pass:** It is a skill! The outgoing runner starts running before receiving the baton. They receive it without looking back, using a visual or verbal signal.
- **Rule:** If you drop the baton, you can pick it up, but you lose time. If it rolls out of your lane, your team is disqualified.

A diagram of a track lane showing the 20m exchange zone. Two stick figures, one passing a baton to the other within the zone.

EVALUATION

1. What is the main difference between a sprint and a long-distance race?
2. What do you do when you hear the command "Get set"?
3. How many runners are in a 4 x 100m relay team?
4. What is the special area called where you must pass the baton?
5. What happens if a relay runner drops the baton and it rolls into another lane?

ASSIGNMENT

1. **Drawing:** Draw a picture of a relay baton. Write why it is hollow (so it's light and easy to grip).

2. **Practical:** At home, practice the "On your marks" and "Get set" positions without blocks.
Use a line on the floor.
3. **Written:** Write down the consequence for a relay team that passes the baton outside the exchange zone.

WEEK 8: ATHLETICS I - TRACK EVENTS II

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Identify middle and long-distance races.
2. Differentiate between sprinting and long-distance running techniques.
3. Explain the term "pacing."
4. Describe proper breathing techniques for endurance running.

CONTENT

1. Middle and Long-Distance Running (The Test of Stamina)

These races are not about pure speed but about endurance—keeping a good speed for a long time.

- **Middle Distance:** 800m (2 laps) and 1500m (about 3.75 laps). Requires both speed and endurance.
- **Long Distance:** 5000m (12.5 laps), 10,000m (25 laps), and the Marathon (42.195km) which is run on roads, not a track.
- **Cross-Country:** Running over natural, often rough terrain like grass, hills, and mud. It is usually a long-distance race.

2. Techniques for Endurance Running

- **Running Form:** More relaxed than sprinting. Shorter strides, lower knee lift to save energy. Arms swing comfortably at the sides.
- **Breathing:** Breathe deeply through both your nose and mouth. Find a rhythm. A common pattern is to breathe in for two steps and out for two steps. This supplies enough oxygen to your working muscles.
- **Pacing:** This is the most important strategy. It means running at a steady, controlled speed you can maintain for the whole race.
 - Bad Pacing: Starting too fast and getting exhausted halfway.
 - Good Pacing: Starting at a comfortable speed, maybe speeding up at the end if you have energy left (the "kick").

BAD PACING

GOOD PACING

A simple graph or cartoon. First part shows a rabbit sprinting then collapsing (bad pacing). Second part shows a tortoise moving steadily (good pacing).

EVALUATION

1. Is the 800m race a sprint or a middle-distance race?
2. How many laps is a 1500m race on a standard 400m track?
3. In your own words, what does "pacing" mean for a runner?
4. How should a long-distance runner breathe differently from a sprinter?
5. What is one big difference between running on a track and running cross-country?

ASSIGNMENT

1. **Practical:** Go for a 5-minute jog. Try to keep the same speed from start to finish (practice pacing). Write one sentence about how it felt.
2. **Written:** List three differences between a 100m sprinter and a marathon runner (think about body, technique, and training).
3. **Research/Oral:** Ask an adult or look up: What is the current world record time for the men's marathon? Write it down (e.g., about 2 hours).

WEEK 9: ATHLETICS I - HURDLES AND SPECIALIZED EVENTS

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Define a hurdle race.
2. List the standard distances for hurdle races.
3. Describe the basic technique for clearing a hurdle.
4. Mention two rules in hurdle races.

CONTENT

1. **Introduction to Hurdles** Hurdling is a challenging track event that combines sprinting with jumping. Runners must clear 10 barriers called hurdles without breaking their stride.

- **Distances:**

- 100m Hurdles (for women and girls).
- 110m Hurdles (for men and boys – the hurdles are taller).
- 400m Hurdles (one lap of the track with hurdles).

2. **Hurdling Technique (It's Like a Big Stride!)**

The goal is to clear the hurdle with as little upward jump as possible, almost like taking a giant step over it.

a. **Approach:** Sprint fast to the first hurdle.

b. **Take-off:** Push off the ground with your take-off leg.

c. **Clearance:**

* **Lead Leg:** This leg goes over the hurdle first. It should be straight, not bent.

* **Trail Leg:** This leg follows. It is bent and pulled sideways to clear the hurdle.

d. **Landing:** Land on your lead leg and continue sprinting immediately to the next hurdle.

A sequence of a hurdler clearing a hurdle, showing the straight lead leg and bent trail leg.

3. Rules and Regulations

- You must stay in your own lane.
- You are allowed to knock over hurdles by accident. It slows you down but is not a foul.
- You are disqualified if you deliberately knock a hurdle down with your hand, or if you run around a hurdle instead of over it.
- **Steeplechase:** A special long-distance race (3000m) where runners jump over fixed, heavy barriers and a water pit. It's very tough!

EVALUATION

1. What are the barriers in a hurdle race called?
2. Which leg (lead or trail) should be straight when going over the hurdle?
3. Name one standard hurdle race distance.
4. If your foot accidentally hits a hurdle and it falls, are you disqualified?
5. What is the main extra challenge in a steeplechase compared to a normal long-distance race?

ASSIGNMENT

1. **Drawing:** Draw a simple diagram of a hurdle. Label the base and the top bar.
2. **Practical/Safety:** Create a safe "practice hurdle" in your space using a line of books or a low stick. Practice stepping over it while walking, focusing on leading with one leg.

3. **Written:** Write down two important rules in hurdle racing.

WEEK 10: PERSONAL AND ENVIRONMENTAL HEALTH I

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Define personal hygiene.
2. Explain the importance of daily bathing and oral hygiene.
3. Discuss hygiene requirements during puberty (including menstruation).
4. List proper hand-washing steps.

CONTENT

1. Personal Hygiene

Personal hygiene means taking care of your own body to keep it clean, healthy, and free from germs. It prevents illnesses and helps you feel good about yourself.

- **Daily Bathing:** Wash your entire body with soap and water. Pay special attention to sweaty areas (armpits) and private parts. Bathing removes dirt, sweat, and germs.
- **Oral Hygiene:**
 - Brush your teeth at least twice a day (morning and night) with fluoride toothpaste.
 - This prevents tooth decay (cavities), gum disease, and bad breath (halitosis).
- **Hair and Nails:**
 - Keep hair clean and neatly styled to avoid lice and dandruff.
 - Cut fingernails and toenails short and clean underneath them. Long nails can trap dirt and germs.

2. Puberty Hygiene (Growing Up Clean)

During puberty (around ages 9-16), your body changes and produces more sweat and oil.

- **Body Odour:** Sweat itself doesn't smell, but when bacteria on your skin mix with sweat, it causes odour. Solution: Bathe daily and use a deodorant or antiperspirant.
- **Menstrual Hygiene (For Girls):**

- Menstruation (period) is a normal, healthy monthly process where blood flows from the uterus.
- Use clean sanitary pads, tampons, or menstrual cups.
- Change pads regularly (every 4-6 hours) to prevent infection and odour.
- **Dispose of used pads properly:** Wrap them in paper and put them in a bin. Do not flush them as they block toilets.

3. Hand Washing (Your Best Defence Against Germs!)

Germ from your hands can easily enter your body through your mouth, nose, or eyes.

- **When to Wash:** Before eating, after using the toilet, after playing outside, after coughing/sneezing.
- **Proper Steps (20 seconds!):** a. Wet hands with clean, running water. b. Apply soap. c. Lather and scrub all surfaces: palms, back of hands, between fingers, under nails. d. Scrub for at least 20 seconds (sing "Happy Birthday" twice). e. Rinse well under running water. f. Dry with a clean towel or air dry.

6 STEPS TO HANDWASHING

A step-by-step diagram showing the 6 steps of handwashing with simple pictures.

EVALUATION

1. Why is personal hygiene important for your health?
2. How does brushing your teeth prevent sickness?
3. Why do teenagers need to start using deodorant?
4. Name two materials a girl can use for menstrual hygiene.
5. Describe one situation when it is absolutely necessary to wash your hands.

ASSIGNMENT

1. **Written:** Make a list of 5 essential items for a personal hygiene kit (e.g., Soap, Toothbrush, Toothpaste, Deodorant, Comb).
2. **Drawing:** On a sheet of paper, design a poster that teaches younger pupils the steps of proper hand washing.
3. **Reasoning/Written:** Explain why keeping your fingernails short and clean is an important part of hygiene, especially before eating.

WEEK 11: REVISION

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Recall key concepts taught in the term.
2. Demonstrate physical fitness exercises learned.
3. Answer questions related to athletics and hygiene confidently.

CONTENT

- **Review of Fitness:** Components of fitness (Heart, Strength, etc.), FITT principle, importance of warm-up/cool-down.
- **Review of Athletics:** Sprints, Relays, Middle/Long Distance, Hurdles. Key rules and techniques.
- **Review of Health:** Puberty changes, personal hygiene, handwashing.
- **Practical Session:** A fun mini-competition: e.g., 30-second skipping, relay baton pass practice, or a hygiene quiz.

EVALUATION (Teacher selects random application-based questions from Weeks 1-10) E.g., "If you want to improve your muscular endurance for carrying water, which FITT principle would you change: Frequency, Intensity, Time, or Type?" "Describe the proper way to pass a relay baton."

ASSIGNMENT

1. **Study:** Review all your P.H.E. notes from this term to prepare for your examination.
2. **Practical:** During the holiday, choose one fitness exercise (e.g., skipping, jogging) and do it for 10 minutes, three times a week.
3. **Reflective Writing:** Write a short paragraph (5-6 sentences) about which topic you enjoyed the most this term (Fitness, Athletics, or Health) and explain why.

PRIMARY 6 PHYSICAL AND HEALTH EDUCATION SCHEME OF WORK

SECOND TERM

Week	Topic	Content
1	Personal and Environmental Health II	Environmental health - clean surroundings, waste disposal, drainage systems, toilet facilities; Water sanitation; Food hygiene; Air quality; Noise pollution; Community health practices; Disease vectors control - mosquitoes, flies, rats
2	Personal and Environmental Health III	Common communicable diseases - malaria, typhoid, cholera, tuberculosis, COVID-19; Prevention strategies; Immunization importance; Non-communicable diseases - diabetes, hypertension, cancer; Lifestyle and health; Health screening and check-ups
3	Athletics II - Field Events: Jumping I	High jump - techniques (scissors, straddle, Fosbury flop), approach run, take-off, bar clearance, landing; Equipment and safety; Measuring and recording heights; Rules and regulations; Progressive training
4	Athletics II - Field Events: Jumping II	Long jump - approach run, take-off board, flight techniques (hang, hitch-kick), landing in sand pit; Measuring distances; Triple jump introduction - hop, step, jump phases; Pole vault basics; Safety considerations
5	MIDTERM EXAMINATION	Assessment of topics covered in weeks 1-4
6	MIDTERM BREAK	Rest and relaxation period
7	Athletics II - Field Events: Throwing I	Shot put - grip, stance (glide technique, spin technique), putting action, release, follow-through; Weight of shot for different ages; Safety circle and rules; Building strength for throwing; Practice drills
8	Athletics II - Field Events:	Discus throw - grip, wind-up, spin, release, follow-

	Throwing II	through; Javelin throw - grip, approach run, throwing action, release angle; Hammer throw basics; Safety procedures; Sector lines; Measuring throws; Competition rules
9	Ball Games I - Football and Basketball	Football - advanced skills (dribbling variations, long passes, shooting techniques, heading); Positions and formations; Game strategies; Set pieces - corners, free kicks; Basketball - advanced dribbling, shooting (lay-up, jump shot), defensive techniques; Plays and strategies
10	Ball Games II - Volleyball and Handball	Volleyball - serving techniques (underhand, overhand, jump serve), setting, spiking, blocking, digging; Court positions and rotation; Game tactics; Handball - advanced techniques, fast breaks, shooting variations, goalkeeper skills; Team formations; Match play strategies
11	REVISION	Review of all topics covered; Athletics field events practice; Ball games tournaments; Question and answer sessions
12	EXAMINATION	End of term assessment - theory and practical
13	CLOSING	Report card distribution; Vacation assignment

PRIMARY 6 PHYSICAL AND HEALTH EDUCATION LESSON NOTES

SECOND TERM

WEEK 1: PERSONAL AND ENVIRONMENTAL HEALTH II

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Define environmental health.
2. List three methods of proper waste disposal.
3. Identify disease vectors and methods to control them.
4. Explain the importance of drainage systems.

CONTENT

1. Environmental Health

Environmental health is about keeping our surroundings—our homes, schools, streets, water, and air—clean and safe. A dirty environment breeds germs that make us sick.

2. Proper Waste Disposal

Waste is anything we throw away (refuse). Leaving it lying around attracts flies, rats, and smells.

○ **Methods:**

- **Burning:** Burning dry waste like paper and wood in a safe, designated incinerator or pit, away from houses. Never burn plastics as they release poisonous smoke.
- **Burying:** Digging a deep pit for biodegradable waste (things that rot like food scraps, leaves). Cover with soil.
- **Recycling:** Separating materials like plastics, glass, paper, and metals so they can be made into new things. This saves resources and reduces waste.
- **Use of Dustbins:** Always use covered dustbins inside and outside. This keeps flies and smells locked in. Empty them regularly.

DISPOSAL METHODS

A simple chart with icons for the four disposal methods: Fire (Burn), Hole (Bury), Recycle Symbol, Covered Bin.

3. Drainage Systems

Drainage channels (gutters) carry away rainwater and dirty water from our homes and streets.

- **Importance:** Prevents flooding and stops water from collecting and becoming stagnant.

- **Our Duty:** Do not throw rubbish like nylon bags or food waste into gutters. This blocks them, causes flooding during rain, and creates stagnant water for mosquitoes to breed.

4. Disease Vectors Control

Vectors are living things that carry disease-causing germs from one person to another.

- **Mosquitoes:** Carry Malaria. They breed in stagnant water (in old tyres, cans, blocked gutters).
 - **Control:** Remove stagnant water. Use mosquito nets. Clear bushes around the house.
- **Houseflies:** Carry germs for Cholera, Typhoid, and Diarrhoea. They breed on rotting food and faeces.
 - **Control:** Cover food. Keep toilets clean and covered. Use covered dustbins.
- **Rats:** Can carry Lassa Fever. They live in dirty, cluttered places and eat our food.
 - **Control:** Keep food in sealed containers (metal or thick plastic). Seal holes in walls. Keep your environment tidy.

EVALUATION

1. What does "environmental health" mean?
2. Why is recycling better than just throwing plastic away?
3. What problem is caused by throwing nylon into drainage gutters?
4. Which disease is spread by mosquitoes, and where do they breed?
5. How can you prevent rats from entering your kitchen?

ASSIGNMENT

1. **Drawing:** Draw a picture of a covered dustbin. Write a caption: "Cover your bin to stop flies!"
2. **Practical/Written:** Look in your home. Find three items that can be recycled instead of thrown away. List them.

3. **Reasoning/Written:** Write one sentence explaining why a puddle of stagnant water behind a house is a health danger.

WEEK 2: PERSONAL AND ENVIRONMENTAL HEALTH III

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Differentiate between communicable and non-communicable diseases.
2. List three common communicable diseases and their prevention.
3. List two non-communicable diseases.
4. Explain the importance of health screening.

CONTENT

1. Communicable Diseases (Diseases that Spread)

These are illnesses caused by germs (bacteria, viruses, parasites, fungi) that can pass from an infected person, animal, or object to a healthy person.

Disease	How it Spreads	Key Prevention Method
Malaria	Bite of an infected mosquito.	Sleep under an Insecticide-Treated Net (ITN). Clear stagnant water.
Cholera/Typhoid	Dirty water and food contaminated with faeces.	Drink clean, boiled or treated water. Wash hands with soap. Cook food well.
Tuberculosis (TB)	Air. When an infected person coughs or sneezes.	Good ventilation. Vaccination (BCG). Cover mouth when coughing.
COVID-19	Airborne droplets. Close contact with infected person.	Vaccination. Wear masks in crowds. Wash hands.

2. Non-Communicable Diseases (Diseases that DO NOT Spread)

These are not caused by germs you can catch. They are often linked to lifestyle, diet, genetics, or environment.

- **Diabetes:** The body cannot properly use sugar from food. Can be managed with diet, exercise, and sometimes medicine.

- **Hypertension (High Blood Pressure):** The heart works too hard to pump blood. Linked to too much salt, stress, lack of exercise, and obesity.
- **Cancer:** Uncontrolled growth of abnormal cells in the body. Some causes include smoking, certain viruses, and genetics.

3. Prevention and Health Screening

- **Immunization (Vaccination):** Getting vaccines is the best way to prevent many communicable diseases (like measles, polio, yellow fever). Your immunization card keeps track.
- **Healthy Lifestyle:** Eating fruits/vegetables, exercising, avoiding smoking/alcohol, and managing stress can prevent many non-communicable diseases.
- **Health Screening:** This means going for a check-up at a clinic even when you feel fine. It helps doctors find problems early (like high blood pressure) when they are easier to treat.

EVALUATION

1. What is the main difference between a communicable and a non-communicable disease?
2. Name one disease spread through dirty water and one spread through the air.
3. How does sleeping under a mosquito net prevent disease?
4. Give two examples of non-communicable diseases.
5. Why is it important to have an immunization card and keep it safe?

ASSIGNMENT

1. **Oral/Written:** Ask your parents to see your immunization card. Write down the name of two vaccines you have received.
2. **Written:** List three healthy habits that can help prevent both communicable and non-communicable diseases (e.g., washing hands, eating vegetables).
3. **Analysis:** Write one sentence that explains the difference between the cause of Malaria and the cause of Diabetes.

WEEK 3: ATHLETICS II - FIELD EVENTS: JUMPING I (HIGH JUMP)

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Define High Jump.
2. List the four phases of High Jump.
3. Identify different styles of High Jump.
4. Mention two safety rules in High Jump.

CONTENT

1. What is High Jump?

High jump is a vertical jump event. The athlete runs and jumps over a horizontal bar, trying to clear the greatest height without knocking the bar off its supports.

2. Phases of High Jump

- a. **The Approach (Run-up):** A curved run to build up speed and prepare for the take-off.
- b. **The Take-off:** The athlete plants one foot strongly on the ground to launch their body up and over the bar.
- c. **The Clearance (Flight):** The moment the body goes over the bar using a specific style.
- d. **The Landing:** Falling safely onto a thick, soft foam mat (landing area).

A sequence of four drawings showing the phases: 1) Curved run, 2) Foot plant and launch, 3) Body arching over bar, 4) Landing on back on mat.

3. Styles of High Jump

- **Scissors Style:** The oldest and simplest. The athlete goes over the bar facing forward, lifting legs one after the other like scissor blades. Good for beginners.
- **Straddle Style:** The athlete goes over the bar face down, rolling over it. The lead leg is straight, and the body straddles the bar.
- **Fosbury Flop (Modern Style):** Named after athlete Dick Fosbury. The athlete jumps backwards, arching their back over the bar and landing on their shoulders/back. This is the style used by all top athletes today because it is more efficient.

4. Safety in High Jump

- The landing area must always be a proper, thick foam mat.
- Never attempt to high jump onto hard ground or a thin mattress.
- Clear the area of any objects.
- Wait for your turn; do not run into the landing area when someone else is jumping.

EVALUATION

1. In high jump, is the athlete trying to jump high or far?
2. What is the purpose of the curved run-up?
3. Name two styles of high jump. Which one is considered modern?
4. In the Fosbury Flop, which part of the body goes over the bar first?
5. Why is a foam mat absolutely necessary for high jump?

ASSIGNMENT

1. **Drawing:** Draw a diagram showing the high jump uprights and the crossbar resting on them.
2. **Written:** The style where the jumper goes over face-down is called the _____ style.
3. **Written:** List three pieces of equipment needed for a safe high jump competition (e.g., Uprights, Crossbar, Foam Mat).

WEEK 4: ATHLETICS II - FIELD EVENTS: JUMPING II (LONG JUMP)

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Define Long Jump.
2. Describe the phases of Long Jump.
3. Introduce the Triple Jump phases.
4. Explain how to measure a long jump.

CONTENT

1. What is Long Jump?

Long jump is a horizontal jump event. The athlete sprints down a runway and jumps as far as possible from a take-off board into a pit filled with soft sand.

2. Phases of Long Jump

- a. **Approach Run:** A long, fast sprint down the runway to build maximum speed.
- b. **Take-off:** The athlete hits the take-off board with one foot and launches into the air. Stepping over the board (called a foul) is not allowed.
- c. **Flight:** The time in the air. Athletes use techniques to maintain balance and prepare for landing (e.g., "Hang" style or "Sail" style).
- d. **Landing:** The athlete lands with both feet together in the sandpit, and then falls forward. You want to land as far forward as possible without falling backwards.

A diagram of a long jump runway, take-off board, and sandpit. Arrows show the sprint, take-off, flight arc, and landing.

3. Measuring the Jump

The distance is measured from the front edge of the take-off board to the nearest mark in the sand made by any part of the athlete's body (usually their heels). If you fall back, you lose distance!

4. Introduction to Triple Jump ("Hop, Step, and Jump")

This is a more complex horizontal jump.

- a. **Hop:** Take off and land on the same foot.
- b. **Step:** From that landing, take off and land on the other foot.
- c. **Jump:** From that landing, take off and land in the sandpit with both feet together.
 - Memory aid: "Same, Other, Both."

EVALUATION

1. Is long jump about height or distance?
2. What is it called if a long jumper's foot crosses the front edge of the take-off board?
3. How should a long jumper land in the sand?

4. In triple jump, what is the sequence of landings? (e.g., right foot, then...?)
5. From which point is a long jump measured?

ASSIGNMENT

1. **Drawing:** Draw the layout of a long jump area, labeling the runway, take-off board, and sandpit.
2. **Written:** If you take off from your right foot for a triple jump, write the sequence: Hop on ____ foot, Step onto ____ foot, Jump and land on ____ feet.
3. **Reasoning/Written:** Explain why having a very fast sprint is so important for a long jumper.

WEEK 5 & 6: MIDTERM EXAM & BREAK

WEEK 7: ATHLETICS II - FIELD EVENTS: THROWING I (SHOT PUT)

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Define Shot Put.
2. Demonstrate the correct grip for the shot.
3. Differentiate between "Putting" and "Throwing."
4. List the phases of the Shot Put.

CONTENT

1. What is Shot Put?

Shot put is a throwing event where athletes push ("put") a heavy metal ball (the shot) as far as possible from a circle. It tests pure strength and technique.

- **Weight:** For Primary 6, a lighter shot (around 2kg-3kg) is used.

2. The Grip and Placement

- **Grip:** Rest the shot on the base of your fingers, not in the palm. Spread your fingers slightly. Your thumb and little finger support the sides.
- **Placement:** Tuck the shot firmly under your chin, against your neck. It should be close to your jaw. It must not drop below your shoulder during the put.

A close-up diagram showing the correct grip and placement of the shot against the neck, from a side view.

3. The Putting Action

The key rule: You push the shot, you do not throw it like a ball.

- **Stance:** Start at the back of the throwing circle, facing away from the throwing direction.
- **Glide/Shift:** A quick, low hop towards the front of the circle to build momentum.

- **Power Position:** Rotate your body, feet planted, facing the side.
- **Release:** In one explosive motion, drive with your legs, rotate your hips and chest, and push the shot out from your neck at an upward angle (about 40°). Your arm follows through like you are reaching for something high.

4. Safety Rules

- The landing sector is a wide fan-shaped area in front of the circle. Never stand in this area when someone is throwing.
- Always carry the shot with both hands back to the circle.
- Wait for the "Retrieve" command before going to get the shot.

EVALUATION

1. What is the heavy ball used in shot put called?
2. Where on your hand should you hold the shot?
3. Why is it called "shot put" and not "shot throw"?
4. What is the shape of the area where the athlete stands to throw?
5. Why is it dangerous to walk into the landing sector during competition?

ASSIGNMENT

1. **Practical:** Practice the shot put stance and pushing motion without a shot (use a stone or orange). Write down what part of your body feels like it's working the hardest.
2. **Drawing:** Draw a circle to represent the shot put circle. Draw a fan shape in front of it for the landing sector.
3. **Written:** Write one key rule about how to hold and release the shot.

WEEK 8: ATHLETICS II - FIELD EVENTS: THROWING II (DISCUS & JAVELIN)

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Identify the Discus and Javelin implements.
2. Describe the grip for Discus.
3. Describe the grip and carriage for Javelin.
4. Mention safety rules for throwing events.

CONTENT

1. The Discus Throw

- **Implement:** The discus is a round, heavy disc made of wood with a metal rim. It is thrown from a circle.
- **Grip:** Place your hand flat on top of the discus. Spread your fingers evenly over the surface, with the fingertips curling over the rim.
- **Action:** The athlete spins one-and-a-half times inside the circle to build speed (like a spinning top) and releases the discus with a whip-like motion of the arm, making it fly flat through the air.

DISCUS GRIP

A picture of a discus with a hand showing the correct finger placement on top.

2. The Javelin Throw

- **Implement:** The javelin is a long, spear-like rod with a sharp metal point. It is thrown from a runway, not a circle.
- **Grip:** Held at the cord grip (a textured area in the middle). Common grips are the "American grip" (thumb and forefinger behind the cord) or "Finnish grip."

- **Action:** The athlete runs down the runway, pulls the javelin back over the shoulder, and throws it overhand, releasing it high into the air so it sails point-first.
- **Rule:** For the throw to count, the metal tip must strike the ground first. If it lands flat or tail-first, it is a foul.

3. Safety in Throwing Events

- Javelins are sharp weapons. Always carry them vertically, point down. Never run with them pointing forward or wave them around.
- Never throw until the teacher gives the command and the landing area is completely clear.
- Retrieving: Wait until all throwers have finished before anyone goes to collect the implements.
- Always walk when carrying or retrieving throwing implements.

EVALUATION

1. What is the shape of a discus?
2. Does the javelin thrower use a circle or a runway?
3. How must a javelin land for the throw to be valid?
4. What is the safest way to carry a javelin back from the field?
5. Describe the discus grip in one sentence.

ASSIGNMENT

1. **Drawing:** Draw a javelin and label three parts: Tip, Shaft, and Grip (Cord).
2. **Written:** State one major difference between the shot put and the javelin throw (think about the action and the implement).
3. **Reasoning/Written:** Explain why it is extremely dangerous to run while holding a javelin with the point facing up.

WEEK 9: BALL GAMES I - FOOTBALL AND BASKETBALL

OBJECTIVES By the end of the lesson, pupils should be able to:

1. List three advanced skills in Football.
2. Explain the "Heading" technique in Football.
3. Describe the "Lay-up" shot in Basketball.
4. Identify positions in a Football team.

CONTENT

1. Football (Soccer) - Advanced Skills

- **Heading:** Using the forehead to hit the ball. Keep your eyes open, mouth closed, and neck muscles firm. Use it to pass, clear the ball, or score. Never use the top of your head.
- **Shooting for Power:** Striking the ball with the instep (the laces part of your boot). Plant your non-kicking foot next to the ball, lock your ankle, and follow through towards the target.
- **Positions and Roles:**
 - **Goalkeeper:** Guards the goal, can use hands inside the penalty area.
 - **Defenders:** Protect the goal, stop the other team's attackers.
 - **Midfielders:** The link between defence and attack. They run a lot, passing and creating plays.
 - **Forwards/Strikers:** Main job is to score goals.

FOOTBALL POSITIONS

A simple football field diagram with positions marked: GK, DEF, MID, FW.

2. Basketball - Skills

- **Shooting - The Lay-up:** A close-range shot. Dribble towards the basket, take one step, jump off the opposite foot, and gently lay the ball against the backboard so it rolls into the hoop. It's a high-percentage shot.
- **Shooting - The Jump Shot:** The most common shot. Jump straight up and release the ball at the highest point of your jump for a soft, arcing shot.

- **Dribbling:** Bounce the ball with your fingertips, not your palm. Keep the ball low (below your waist) to protect it from defenders.
- **Defence:** Stay in a low, balanced stance. Move your feet, don't just reach. Try to steal the ball or block the shot without making body contact (foul).

1. Dribble Approach

2. Step & Jump

3. Laying Ball On Backboard

A sequence showing a basketball lay-up: 1) Dribble approach, 2) Step and jump, 3) Laying ball on backboard.

EVALUATION

1. Which part of the head should contact the ball when heading in football?
2. Name the player who is allowed to use their hands in football.
3. What is the main purpose of a "lay-up" shot in basketball?
4. When dribbling a basketball, should you look at the ball or look up at the court?
5. What is the rectangular board behind the basketball hoop called, used for lay-ups?

ASSIGNMENT

1. **Drawing:** Draw a simple football pitch. Mark the goal posts, centre circle, and penalty area.

2. **Written:** List three basic rules of basketball (e.g., you cannot run with the ball without dribbling = travelling).
3. **Reasoning:** Explain the main job of a defender in a football team.

WEEK 10: BALL GAMES II - VOLLEYBALL AND HANDBALL

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Demonstrate the service technique in Volleyball.
2. Explain "Setting" and "Spiking" in Volleyball.
3. Identify the basic rules of Handball.
4. Describe the role of a Goalkeeper in Handball.

CONTENT

1. Volleyball Skills

Volleyball is played by two teams of 6 players separated by a high net. The ball may not touch the ground.

- **Serving (Starting Play):**
 - **Underhand Serve:** Hold the ball, swing your other arm back, and strike the ball with a closed fist from below the waist. Good for beginners.
 - **Overhand Serve:** Toss the ball up, step forward, and hit it with an open palm above your head. More powerful.
- **Setting:** Using your fingertips to push the ball high into the air, usually for a teammate to spike. It's like creating a perfect pass.
- **Spiking (Attack/ Smash):** The exciting scoring move. A player jumps high and hits the ball hard downwards into the opponent's court.
- **Rotation:** After your team wins the serve back, all players rotate one position clockwise. This ensures everyone plays all positions.

2. Handball Skills

Handball is fast-paced, like football played with hands. The aim is to throw the ball into the opponent's goal.

- **Dribbling:** You can dribble the ball (like in basketball), but after you stop dribbling, you can only take 3 steps. Then you must pass or shoot.

- **Shooting:** Players jump and throw the ball with power, often from outside the 6-meter line (the goal area).
- **Goalkeeper:** The only player allowed inside the 6-meter goal area. They can use any part of their body (feet, hands) to block shots.

A simple handball court diagram showing the goal, 6-meter line, and 7-meter penalty line.

EVALUATION

1. How many players from one team are on the court in volleyball?
2. Describe the action of a "spike" in volleyball.
3. Which body part do you use to perform an overhand serve?
4. In handball, which player is allowed to stand inside the 6-meter semicircle?
5. What is one major difference between volleyball and handball? (Think about how the ball is played).

ASSIGNMENT

1. **Drawing:** Draw a volleyball court, showing the net in the middle dividing two squares.

2. **Written:** Write down two similarities between Football and Handball (e.g., both have goalkeepers and a goal to score in).
3. **Practical:** Practice the underhand volleyball serving motion without a ball 10 times.
Focus on a smooth arm swing.

WEEK 11: REVISION

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Recall rules and skills for field events and ball games.
2. Demonstrate understanding of environmental health.
3. Answer questions confidently on Second Term topics.

CONTENT

- **Review:** Key points from Environmental Health (Waste disposal, vectors). Field Events (Phases of High/Long Jump, Shot Put rules). Ball Games (Positions in football, volleyball skills).
- **Practical Practice:** Set up stations: practice scissors high jump over a low rope, shot put grip with a softball, or volleyball underhand serve.
- **Q&A Session:** Quiz on rules (e.g., "What is a foul in long jump?" "How do you control mosquitoes?") and application of skills.

EVALUATION (Teacher selects random application-based questions from Weeks 1-10)

ASSIGNMENT

1. **Study:** Review all your Second Term P.H.E. notes thoroughly for the end-of-term examination.
2. **Creative Writing:** Write a short essay (one page) on "My Favorite Sport". Describe the sport, the skills needed, and why you enjoy it.
3. **Planning:** List 5 things you will do during the holiday to stay healthy and active (e.g., "I will jog every other morning," "I will help keep our compound clean").

PRIMARY 6 PHYSICAL AND HEALTH EDUCATION SCHEME OF WORK

THIRD TERM

Week	Topic	Content
1	Ball Games III - Table Tennis and Badminton	Table tennis - grip, stance, basic strokes (forehand, backhand), serves, spin techniques, footwork; Singles and doubles rules; Badminton - grip, stance, strokes (clear, drop, smash), serves, net play; Court dimensions; Scoring system; Game strategies
2	Ball Games IV - Tennis and Others	Tennis basics - grip, groundstrokes, volleys, serves; Court layout; Scoring system; Introduction to squash; Introduction to hockey; Rules and basic techniques; Sportsmanship and fair play in all ball games; Organizing mini-tournaments
3	Indigenous Games I	Nigerian traditional games - Ayo (Oware), Ludo, Draft (Checkers), wrestling, stick fighting; Cultural significance; Rules and gameplay; Traditional sports - wrestling styles from different ethnic groups; Preservation of cultural heritage through games
4	Indigenous Games II	More traditional games - hide and seek variations, skipping rope games, hopscotch (Suwe), ten-ten, catcher; Regional games from Nigeria; Games from different cultures; Social benefits of traditional games; Creating new games; Community and team building
5	MIDTERM EXAMINATION	Assessment of topics covered in weeks 1-4
6	MIDTERM BREAK	Rest and relaxation period
7	Use of Medicine I	Understanding medicine and drugs; Types of medicines - prescription, over-the-counter, herbal/traditional; How medicines work in the body; Reading medicine labels; Dosage and instructions; Medicine safety - child-proof caps, storage; Expiry dates
8	Use of Medicine II	Appropriate use of medicines; When to take medicine;

		Following doctor's prescriptions; Dangers of self-medication; Medicine interactions; Allergies and side effects; When to seek medical help; The role of pharmacists; Responsible medicine use
9	Effects of Drug Abuse I	Understanding drug abuse and substance abuse; Types of commonly abused drugs - alcohol, tobacco, cannabis (marijuana), cocaine, heroin, inhalants; Prescription drug abuse; Why people abuse drugs - peer pressure, curiosity, stress, family problems, availability
10	Effects of Drug Abuse II	Physical effects of drug abuse - damage to organs (liver, lungs, brain, heart), addiction, overdose, diseases (HIV/AIDS, hepatitis), mental health issues; Social effects - family breakdown, poor school performance, crime, poverty; Psychological effects - depression, anxiety, paranoia; Economic costs
11	Effects of Drug Abuse III & Health and Wellness	Prevention strategies - saying no, choosing good friends, stress management, goal setting, seeking help; Treatment and rehabilitation; Support systems; Living a drug-free life; Comprehensive health review - nutrition, exercise, mental health, sleep, hygiene; Preparing for secondary school; Lifelong fitness and healthy habits
12	EXAMINATION	End of term and final primary school assessment - theory and practical
13	CLOSING	Graduation ceremony; Report cards; Secondary school preparation; Celebration of achievements

PRIMARY 6 PHYSICAL AND HEALTH EDUCATION LESSON NOTES

THIRD TERM

WEEK 1: BALL GAMES III - TABLE TENNIS AND BADMINTON

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Identify the equipment used in Table Tennis and Badminton.
2. Describe the correct grip for a Table Tennis bat and Badminton racket.
3. Demonstrate or describe basic strokes (Forehand and Backhand).
4. State two rules for scoring in each game.

CONTENT

1. Table Tennis (Ping Pong)

Table tennis is a fast-paced indoor game played on a hard table divided by a low net.

- **Equipment:** Table, Net, Paddle/Bat, and a small, lightweight celluloid Ball.
- **Grip (How to hold the bat):**
 - **Shake-hand Grip:** Hold the handle as if you are shaking hands with it. This is the most common grip worldwide.
 - **Pen-hold Grip:** Grip the handle like you are holding a pen. Popular in Asia.
- **Basic Strokes:**
 - **Forehand Stroke:** Hit the ball on the side where your palm is facing forward. Your body rotates slightly.
 - **Backhand Stroke:** Hit the ball on the side where the back of your hand is facing forward. The wrist is used more.
- **The Serve:** You must toss the ball up from your palm and hit it so it bounces once on your side, goes over the net, and bounces once on your opponent's side.

Side-by-side drawings of Shake-hand Grip and Pen-hold Grip for a table tennis bat.

2. Badminton

Badminton is played with a shuttlecock ("birdie") which has a cork base and feather/nylon skirt. It is played on a rectangular court with a high net.

- **Equipment:** Racket (lighter and longer than table tennis), Shuttlecock, Net, Court.
- **Grip:** A basic "handshake" grip on the racket handle. Hold it loosely but firmly.
- **Basic Strokes:**
 - **Clear:** A high, deep shot to the back of the opponent's court, used for defence.
 - **Smash:** A powerful, downward shot hit steeply to try and win the point. It's the main attacking shot.
 - **Drop Shot:** A gentle, soft shot that just clears the net and falls quickly, catching the opponent off guard.

- **Scoring:** You score a point if the shuttlecock lands inside your opponent's court, or if they hit it into the net or out of bounds. Games are usually played to 21 points.

EVALUATION

1. What is the name of the feathered object hit in badminton?
2. Name the two common ways to hold a table tennis bat.
3. Describe the purpose of a "smash" in badminton.
4. In table tennis, where must the ball bounce during a serve?
5. How does a game of badminton usually start? (With a serve).

ASSIGNMENT

1. **Drawing:** Draw a table tennis bat and ball.
2. **Written:** List three differences between the equipment used in Table Tennis and Badminton (e.g., ball vs shuttlecock, table vs court).
3. **Practical Description:** Explain what a "Forehand stroke" means in table tennis. Describe the movement.

WEEK 2: BALL GAMES IV - TENNIS AND OTHERS

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Describe the game of Tennis (Lawn Tennis).
2. Mention the equipment needed for Tennis and Hockey.
3. Explain the scoring system in Tennis (Love, 15, 30, 40).
4. Define sportsmanship and fair play.

CONTENT

1. Tennis (Lawn Tennis)

Tennis is played on a large rectangular court (grass, clay, or hard surface) with a net.

- **Equipment:** Racket (larger and heavier than badminton), fuzzy Tennis Ball, Net.
- **Skills:**
 - **Serve:** The point starts with an overhand serve from behind the baseline into the opponent's service box.
 - **Volley:** Hitting the ball before it bounces on your side of the court. Requires quick reflexes at the net.
 - **Groundstroke:** Hitting the ball after it bounces once. The forehand and backhand groundstrokes are the most common shots.
- **Scoring (Unique terms!):**
 - 0 points = Love
 - 1st point = 15
 - 2nd point = 30
 - 3rd point = 40
 - 4th point = Game
 - If both players reach 40, it's called Deuce. Then a player must win two points in a row to win the game.

A simple diagram of a tennis court showing the baseline, service boxes, and net.

2. Introduction to Other Games

- **Squash:** Played in a four-walled court. Players take turns hitting a small, bouncy rubber ball against the front wall. The ball can hit the side and back walls. It's very fast and tiring!

- **Hockey:** Played with a curved stick and a hard ball. Players use the flat side of the stick to push, hit, or dribble the ball. The aim is to score in the opponent's goal. (Field hockey is popular in Nigeria).

3. Sportsmanship and Fair Play (The Most Important Rule)

Sportsmanship is about how you behave when you play any game. It's about character.

- **Respect:** Shake hands with your opponent before and after the game.
- **Honesty:** Admit if the ball was in or out, even if the referee didn't see it.
- **Grace:** Accept defeat without complaining or making excuses. Celebrate victory without boasting or mocking the loser.
- **Kindness:** Help an opponent who is injured.
- **Control:** Never argue angrily with the referee or umpire.

EVALUATION

1. What does the score "Love" mean in tennis?
2. What equipment is used to hit the ball in hockey?
3. What is one major difference between tennis and squash? (Think about the court).
4. What is a "volley" in tennis?
5. Why is it important to show good sportsmanship even when you lose a game?
6. Which game uses a yellow, fuzzy ball?

ASSIGNMENT

1. **Drawing:** Draw the shape of a tennis racket.
2. **Written:** Write out the tennis scoring sequence from 0 to winning a game (Love -> 15 -> 30 -> 40 -> Game).
3. **Written:** List three specific actions that show good sportsmanship during a school sports day.

WEEK 3: INDIGENOUS GAMES I

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Define indigenous games.
2. Identify three traditional games played in Nigeria.
3. Explain how to play "Ayo" or "Ludo".
4. State the importance of preserving cultural games.

CONTENT

1. Meaning of Indigenous Games

Indigenous games are traditional games that come from our Nigerian culture and heritage. They were played by our parents, grandparents, and ancestors long before modern sports like football arrived. They teach us about our history and bring communities together.

2. Board and Strategy Games

- **Ayo (Oware/Mancala):** A strategy game for two players.
 - **Equipment:** A wooden board with 12 holes (6 on each side) and 48 seeds (4 in each hole).
 - **How to play:** Players take turns picking up seeds from one of their holes and "sowing" them counter-clockwise into other holes. The goal is to capture your opponent's seeds based on the final count in a hole. It teaches counting, planning, and patience.
- **Ludo:** A popular family board game of chance and strategy.
 - **Equipment:** A square board with a cross path, 16 tokens (4 per player), and a die.
 - **How to play:** Roll the die to move your tokens from start to home. You can send your opponent's token back to start by landing on their space. The first to get all four tokens home wins.

- **Draughts (Checkers):** Played on a checkered board with 12 black and 12 white discs. Players move diagonally to capture the opponent's pieces by jumping over them.

A labeled picture of an Ayo board with seeds in the holes.

3. Traditional Wrestling (Kokawa / Ijakadi)

This is a major sport and cultural event in many Nigerian communities (e.g., in the North and among the Igbo and Yoruba).

- It takes place in a sandy circle or village square during festivals.
- **Goal:** To throw your opponent so that their back touches the ground.
- It builds physical strength, courage, agility, and respect for the opponent.
Champions are highly respected.

4. Cultural Significance

- **Preserves History:** These games are part of our identity.
- **Affordable:** They use local materials (seeds, wood, sand).
- **Social Bonding:** They bring families and communities together during celebrations.
- **Mental Development:** Games like Ayo sharpen the mind.

EVALUATION

1. Why are these games called "indigenous"?
2. What materials are needed to play the game of Ayo?
3. How does a wrestler win a traditional wrestling match?
4. Mention two benefits of playing indigenous games.
5. Is Ludo a game of physical strength or mental strategy?

ASSIGNMENT

1. **Oral/Written:** Interview a parent or elderly relative. Ask them: "What traditional game did you play as a child?" Write a short paragraph about the game they describe.
2. **Drawing:** Draw the shape of an Ayo board with its two rows of six holes.
3. **Research/Written:** Name three Nigerian states or ethnic groups known for their traditional wrestling festivals.

WEEK 4: INDIGENOUS GAMES II

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Describe how to play "Suwe" (Hopscotch) and "Ten-Ten".
2. List the benefits of active traditional games.
3. Explain the rules of "Hide and Seek" (Boju-Boju).
4. Discuss how these games promote friendship.

CONTENT

ACTIVE TRADITIONAL GAMES

(Playground Favourites)

GAMES

SOCIAL & PHYSICAL BENEFITS

Physical Fitness

Physical Fitness

Running, jumping, hopping improve cardiovascular health, strength and flexibility.

Social Skills

Teamwork, taking turns, following & songs.

Creativity Friendship

Playing together builds strong bonds.

Cost

Free & can be played anywhere.

1. Active Traditional Games (Playground Favourites)

○ Suwe (Hopscotch):

- Draw a pattern of numbered squares on the ground with chalk or a stick.

- Toss a small stone (marker) into the first square.
- Hop on one foot through the empty squares, skip the square with the stone, pick up the stone on your way back.
- If you step on a line, lose balance, or miss the square with your toss, you lose your turn.
- Develops balance, coordination, and aiming skills.
- **Ten-Ten (Kite-Kite/Who is in the Garden?):** A clapping and singing game, usually for girls.
 - Two partners face each other, clap their own hands, then clap each other's hands in a rhythm while singing a song and moving their legs in a pattern (e.g., crossing, stepping side-to-side).
 - If both move their legs the same way at the wrong time, a point is scored against them.
 - Develops rhythm, coordination, and teamwork.
- **Hide and Seek (Boju-Boju):**
 - One person is "It". They cover their eyes and count to a number (e.g., 50) while others hide.
 - "It" then searches for the hidden players.
 - The first person found becomes the next "It". If "It" cannot find everyone, they may call "Ollie ollie oxen free!" for all to come out.
- **Catcher (Tiggy/You're It!):** One person chases others. Whoever is touched becomes the new "catcher". Develops speed and agility.

2. Social and Physical Benefits

- **Physical Fitness:** Running, jumping, hopping improve cardiovascular health, strength, and flexibility.
- **Social Skills:** They teach teamwork, taking turns, following rules, and conflict resolution.
- **Creativity:** Children make up their own rules, songs, and variations.

- **Friendship:** Playing together builds strong bonds and happy memories. It's more fun than watching TV alone!
- **Cost:** They are free and can be played anywhere with simple materials.

EVALUATION

1. Describe the first step in playing Suwe (Hopscotch).
2. What physical skill does playing Ten-Ten help to improve?
3. How does a game of Hide and Seek end?
4. What is one social benefit of playing these games with friends?
5. Why are these traditional games considered healthy for children?

ASSIGNMENT

1. **Oral/Written:** Write down the lyrics of one song used in a Nigerian traditional game you know (e.g., "Fire on the mountain, run run run...").
2. **Drawing:** Draw the common numbered grid pattern used for Suwe (Hopscotch) on the ground.
3. **Observation/Written:** List three games you and your friends actually play during break time at school. Are any of them traditional games?

WEEK 5 & 6: MIDTERM EXAM & BREAK

WEEK 7: USE OF MEDICINE I

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Define medicine.
2. Differentiate between prescription and over-the-counter medicines.
3. Identify the importance of reading medicine labels.
4. Explain what an expiry date means.

CONTENT

1. Meaning of Medicine

A medicine (or drug, in the correct sense) is a substance used to treat, cure, prevent, or diagnose a disease or illness. Medicines help your body heal itself. They come as tablets, syrups, injections, ointments, etc.

2. Types of Medicines

○ Prescription Medicines:

- These are stronger medicines meant for specific, often serious, illnesses.
- You cannot buy them without a written note (prescription) from a qualified doctor.
- Examples: Antibiotics for serious infections, strong painkillers, medicines for heart disease or asthma.

○ Over-the-Counter (OTC) Medicines:

- These are for common, minor health problems.
- You can buy them at a pharmacy without a doctor's prescription, but it's still best to ask a pharmacist for advice.
- Examples: Paracetamol for headache/fever, simple cough syrup, antacids for stomach upset.

○ Traditional/Herbal Medicines:

- Made from plants, roots, and herbs (e.g., ginger for stomach, neem leaves).
- They can be effective but should also be used with knowledge and care.

3. Medicine Safety (READ THE LABEL!)

- **Dosage:** This is the correct amount to take (e.g., "Take 2 tablets," "Take 5ml"). Never take more than the prescribed dose. Taking too much (overdose) is poisonous and can kill.
- **Expiry Date:** Every medicine packet has a date (e.g., EXP 06/2025). Never use medicine after this date. Expired medicine can become toxic (poisonous) or simply stop working.
- **Storage:** Keep medicines in a cool, dry place away from direct sunlight. Always store them out of reach and sight of small children, preferably in a locked cupboard.

A labeled picture of a medicine syrup bottle, highlighting: Name of Medicine, Dosage instructions, Expiry Date.

EVALUATION

1. What is the main purpose of taking medicine?
2. What is the key difference between prescription and OTC medicine?
3. Why is it dangerous to take medicine that has passed its expiry date?
4. What does the word "dosage" mean?
5. Where is the safest place in a home to store medicines?

ASSIGNMENT

1. **Practical/Observation:** With adult supervision, find an empty, clean medicine box or bottle at home. Draw it and copy the Expiry Date written on it.
2. **Written:** Write two important safety rules for using medicine (e.g., "Always check the expiry date," "Never share your prescription medicine").
3. **Written:** In your own words, define what "Herbal Medicine" is.

WEEK 8: USE OF MEDICINE II

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Define self-medication.
2. State three dangers of self-medication.
3. Explain who a pharmacist is.
4. List reasons why we should follow doctor's instructions.

CONTENT

1. Appropriate Use of Medicines

- Only take medicine when you are sick, not for fun.
- Use the measuring spoon or cup that comes with the medicine. A kitchen spoon is not accurate!
- If a doctor gives you antibiotics, you must finish the full course (all the tablets), even if you feel better after a few days. Stopping early can let the germs come back stronger.

2. Self-Medication and Its Dangers

Self-medication means treating yourself by using medicines without the advice of a doctor or a trained pharmacist.

- **Examples:** Buying drugs from roadside hawkers, using a friend's leftover medicine, taking drugs because you saw an advert.
- **Dangers of Self-Medication:**
 - a. **Wrong Diagnosis:** You might think you have malaria and take malaria drugs, but you actually have typhoid. The wrong medicine won't work and wastes time.
 - b. **Wrong Dosage:** You might take too little (ineffective) or too much (poisonous).
 - c. **Drug Resistance:** Misusing antibiotics (like not finishing the course) makes bacteria stronger, creating "superbugs" that no medicine can kill.
 - d. **Drug Interaction:** Some medicines should not be mixed with others. A doctor knows this; you might not.

e. **Addiction and Death:** Some medicines, if misused, can be addictive or even cause death.

3. The Role of Pharmacists

A pharmacist is a university-trained expert in medicines. They work in pharmacies (chemist shops).

- They can advise you on OTC medicines for minor problems.
- They check that the doctor's prescription is correct and safe.
- They explain how to take the medicine properly.
- They are a trusted source of health information.

EVALUATION

1. Who is a pharmacist and what is their job?
2. What does "self-medication" mean?
3. Why is buying drugs from a roadside hawker dangerous?
4. Why must you finish all your antibiotic pills even when you feel better?
5. What is a "superbug" and how is it caused?

ASSIGNMENT

1. **Creative Writing:** Write a short story (5-7 sentences) about a child named Tunde who took his friend's leftover medicine for a stomach ache and felt even worse.
2. **Written:** List three people you can trust to give you medicine or advice about medicine (e.g., Doctor, Nurse, Parent/Guardian, Pharmacist).
3. **Reasoning/Written:** Explain why using the small plastic cup that comes with a cough syrup is better than using a kitchen teaspoon.

WEEK 9: EFFECTS OF DRUG ABUSE I

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Define drug abuse.
2. List five commonly abused substances in Nigeria.
3. Explain the meaning of "Peer Pressure."
4. State three reasons why people abuse drugs.

CONTENT

1. Understanding Drug Abuse

Drug abuse is the harmful or wrong use of substances to change how you feel or think.

This includes:

- Using illegal drugs (like cannabis).
- Using legal medicines (like cough syrup with codeine) in the wrong way, without a prescription, or to get "high."
- Using substances like glue or petrol for sniffing.

2. Commonly Abused Substances in Nigeria

- **Alcohol:** Beer, wine, spirits (ogogoro). It is legal for adults but illegal and very harmful for children.
- **Tobacco:** Cigarettes, shisha. Contains nicotine which is highly addictive.
- **Cannabis (Marijuana/Weed/Indian Hemp/Igbo):** An illegal plant that affects the brain.
- **Inhalants:** Sniffing glue, petrol, paint thinner, or marker fluid. These are poisons that can kill brain cells instantly.
- **Prescription Drug Abuse:** Using medicines like Tramadol (painkiller) or Codeine cough syrup without a prescription to feel high.

A "STOP" sign with pictures of forbidden items: Cigarette, Alcohol bottle, Syringe, Cannabis leaf, Glue bottle.

3. Why Do People Start Abusing Drugs? (The Traps)

- **Peer Pressure:** This is when your friends try to influence you to do something you know is wrong, just to "fit in" or be "cool." Saying NO to your friends can be hard but is very important.
- **Curiosity:** Wanting to "try it and see what happens." This is very dangerous; even trying once can lead to addiction or death.
- **Stress and Problems:** Some people try to use drugs to escape from problems at home, school, or with friends. Drugs make problems worse, not better.
- **False Information:** Believing lies like "it makes you strong," "it helps you study," or "everyone is doing it."

EVALUATION

1. What is drug abuse?
2. Name three substances that are often abused.
3. What does "peer pressure" mean? Is it a positive or negative force?
4. Is alcohol a drug? Why is it dangerous for children?
5. Why is sniffing glue especially dangerous for young people?

ASSIGNMENT

1. **Creative:** Create a short, catchy slogan for a "SAY NO TO DRUGS" campaign (e.g., "My Brain is Too Smart for Drugs!").
2. **Research/Written:** List three street names or local names for Cannabis (Marijuana) in Nigeria.
3. **Reasoning/Written:** Explain in two sentences how "curiosity" can be a dangerous starting point for drug abuse.

WEEK 10: EFFECTS OF DRUG ABUSE II

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Identify the physical effects of drug abuse on the body.
2. List the social consequences of drug abuse.
3. Explain the meaning of addiction.
4. Describe the economic cost of drug abuse.

CONTENT

1. Physical Effects (How Drugs Destroy the Body)

Drugs are poisons that damage almost every part of the body.

- **Lungs:** Smoking causes lung cancer, chronic cough, and makes it hard to breathe. Compare: a healthy pink lung vs a black, damaged smoker's lung.
- **Liver:** Alcohol is very toxic to the liver. It can cause cirrhosis (scarring), where the liver stops working. This can kill.
- **Brain:** Drugs kill brain cells. This leads to memory loss, poor judgment, confusion, and can cause permanent mental illness (madness).
- **Heart:** Stimulants (like cocaine) can cause heart attacks and strokes, even in young people.
- **Infections:** Sharing needles for injecting drugs spreads deadly diseases like HIV/AIDS and Hepatitis.

2. Social and Psychological Effects

- **Addiction:** This is a brain disease. The body and mind become dependent on the drug. The person craves it and cannot stop using it even when they want to. They need more and more to feel the same effect.
- **Crime:** Addicts need money to buy drugs. They may steal, rob, or prostitute themselves to get money. This destroys lives and communities.
- **School and Work:** Addicts perform poorly. They may be suspended, expelled, or fired. They lose their future.

- **Family:** Drug abuse causes pain, fighting, shame, and poverty in families. It can break families apart.
- **Mental Health:** Causes depression, anxiety, paranoia (thinking everyone is against you), and violence.

3. Economic Effects

- **Personal Poverty:** The addict spends all their money on drugs, neglecting food, rent, and school fees.
- **National Cost:** The government spends huge amounts of money on police, prisons, hospitals, and rehabilitation for drug users. This is money that could have been used to build schools, roads, and provide clean water.

HEALTHY CHOICES

THE EFFECT OF DRUGS

A simple two-panel drawing. Panel 1: A healthy, happy student with books. Panel 2: The same person looking sick, sad, and alone, with a dark cloud labeled "Drugs" over them.

EVALUATION

1. Name one organ damaged by smoking tobacco.

2. How does heavy drinking affect the liver?
3. What is addiction? Can an addicted person easily stop taking the drug?
4. Mention two ways drug abuse can ruin a student's life at school.
5. How can drug abuse lead someone to commit crimes like stealing?

ASSIGNMENT

1. **Drawing:** Draw a poster showing one harmful effect of drug abuse (e.g., a sick lung, a broken family, a student sleeping in class).
2. **Written:** List three negative consequences of drug abuse on a person's social life (e.g., loss of friends, fighting with family).
3. **Reasoning/Written:** Write one clear sentence explaining why sharing needles for drug injection is a direct path to getting HIV/AIDS.

WEEK 11: EFFECTS OF DRUG ABUSE III & HEALTH AND WELLNESS

OBJECTIVES By the end of the lesson, pupils should be able to:

1. Describe refusal skills (how to say NO).
2. Define rehabilitation.
3. List healthy habits for a drug-free life.
4. Prepare a simple personal health plan for secondary school.

CONTENT

1. Prevention Strategies (Staying Safe and Drug-Free)

- **Refusal Skills (How to Say NO):**
 - a. Say "NO" firmly and clearly. You don't owe a long explanation. "No, thanks."
 - b. Suggest an alternative. "No, I don't smoke. Let's go play football instead."
 - c. Use body language. Stand tall, make eye contact, and step away.
 - d. Blame your parents or values. "My parents would kill me," or "It's against my religion."
 - e. Just walk away. Remove yourself from the situation.
- **Choose Friends Wisely:** Be with friends who respect your decisions and have positive goals. Real friends won't pressure you to do bad things.
- **Talk to Trusted Adults:** If you are pressured or feel troubled, talk to a parent, teacher, school counselor, or religious leader. Don't keep it inside.
- **Get Involved:** Stay busy with sports, music, art, reading, or clubs. Boredom can lead to bad decisions.

2. Treatment and Rehabilitation

- **Rehabilitation Centers (Rehab):** These are special hospitals or centres where drug addicts go to get help to stop using drugs. They receive:
 - Medical care to help with withdrawal symptoms.
 - Counseling/Therapy to understand why they started and learn how to live without drugs.

- Support groups where they meet others recovering.
- Recovery is possible with professional help and strong family support. Addicts need love and encouragement, not rejection.

3. Comprehensive Health Review (Your Wellness Plan for JSS1)

As you prepare for Secondary School, take charge of your health:

- **Nutrition:** Eat a balanced diet with fruits, vegetables, and enough water. Avoid too much sugar and junk food.
- **Physical Activity:** Play sports, dance, or exercise for at least 60 minutes most days.
- **Sleep:** Get 8-9 hours of quality sleep every night for growth and brain function.
- **Hygiene:** Maintain daily bathing, oral care, and clean clothes.
- **Mental Health:** Talk about your feelings. It's okay to feel sad or stressed; find healthy ways to cope (talk, write, draw, exercise).
- **Goals:** Set positive goals for your new school—academic, sports, making good friends.

EVALUATION

1. Suggest one effective way to say NO if a friend offers you a cigarette.
2. What is a rehabilitation centre?
3. Why is it important to choose your friends carefully?
4. Mention three healthy habits that will help you stay drug-free and do well in secondary school.
5. Who are two trusted adults you could talk to if you felt stressed or were being pressured to do something wrong?

ASSIGNMENT

1. **Letter Writing:** Write a short letter to a friend (real or imaginary) advising them to stay away from drugs and explaining two reasons why.

2. **Planning:** List three positive hobbies or activities you enjoy or want to try in secondary school that can keep you busy and happy (e.g., join the debate club, learn to play an instrument, try out for the basketball team).
3. **Practical Planning:** Create a simple daily routine timetable for a school day in JSS1. Include time for waking up, hygiene, school, homework, physical activity (sports/play), family time, and sleep.
