

SS3 CATERING AND CRAFT PRACTICE LESSON NOTES

FIRST TERM

WEEK 1: RESUMPTION TEST / REVISION OF LAST SESSION WORK

1.1 RESUMPTION TEST

(This session will begin with a resumption test administered by the teacher, covering key concepts from SS2. Questions will focus on areas such as methods of cooking, kitchen equipment, food preservation, safety procedures, and basic nutrition.)

1.2 REVISION OF LAST SESSION'S WORK

This is a summary of the core knowledge from SS2, which forms the foundation for this term's work on "Special Menus."

- **FOOD PREPARATION AND COOKING METHODS:**

- **Moist Heat:** Boiling, poaching, steaming, stewing. These methods use water or steam to transfer heat.
- **Dry Heat:** Baking, roasting, grilling, frying (deep and shallow). These methods use hot air or fat to transfer heat.
- **Microwave Cookery:** Uses electromagnetic waves to cook food quickly.

- **KITCHEN EQUIPMENT AND HYGIENE:**

- **Equipment:** Classification (Large, Small, Mechanical), uses, and care (e.g., cookers, refrigerators, blenders, knives).
- **Hygiene:** Personal (hand washing, clean aprons), Kitchen (clean surfaces, pest control), and Food (cross-contamination, storage).

- **FOOD NUTRIENTS:**

- **Macronutrients:** Carbohydrates (Energy), Proteins (Build/Repair), Fats (Energy, Insulation).
- **Micronutrients:** Vitamins (A, B, C, D, E, K) and Minerals (Iron, Calcium, Iodine).

- **FOOD PRESERVATION:**

- **Principles:** To slow down or stop the action of enzymes and micro-organisms.
- **Methods:** Drying (sun drying, dehydration), Freezing, Canning, Salting, Smoking, Pasteurization.

WEEK 2: MEAL PLANNING

2.1 MEANING OF MEAL PLANNING

Meal planning is the process of deciding what to eat for a specific period (e.g., a day, a week) for an individual or a group. It is a thoughtful and detailed process that goes beyond just choosing dishes; it involves:

- **Translating nutritional needs** into actual meals.
- **Organizing food shopping** and preparation.
- **Managing resources** like money, time, and energy.
- **Ensuring meals are balanced, varied, and appealing.**

A good meal plan includes breakfast, lunch, dinner, and any snacks.

2.2 IMPORTANCE OF MEAL PLANNING

Planning meals is a fundamental skill in catering and home management.

1. **Ensures Nutritional Adequacy:** It is the best way to ensure that all family members or guests receive the right balance of macronutrients and micronutrients for their age, health, and activity level.
2. **Budget Control (Saves Money):**
 - Prevents impulse buying at the market.
 - Allows for bulk purchasing of staple items.
 - Minimizes food waste, as you only buy what you need.
3. **Saves Time and Energy:**
 - Reduces the daily stress of deciding "what to cook."
 - Allows for efficient preparation (e.g., cooking in bulk, prepping vegetables in advance).
 - Makes shopping faster with a clear, organized list.

4. **Caters to Special Needs:** It is *essential* for managing the diets of people with special needs (the focus of this term), such as diabetics, vegetarians, invalids, or those with allergies.
5. **Introduces Variety:** Conscious planning helps avoid monotony (e.g., eating rice every day). It encourages the use of different foods, colours, textures, and cooking methods.
6. **Minimizes Waste:** By planning how to use leftovers (e.g., leftover stew for a new yam dish), food spoilage is drastically reduced.

2.3 FACTORS AFFECTING MEAL PLANNING

These are the critical factors to consider when creating any menu.

1. **Nutritional Needs:** This is the *most important* factor. The meal must meet the needs of the people it's for (e.g., an adolescent needs more energy and protein than an elderly person).
2. **The Budget (Money Available):** The plan must be realistic. You cannot plan for salmon and asparagus if the budget only allows for mackerel and *ugwu*.
3. **Food Availability / Seasonality:** What is in the market? Foods in season (e.g., mangoes, corn) are fresher, more nutritious, and cheaper.
4. **Time, Energy, and Skills of the Cook:** A complex meal like *pounded yam* with *efo riro* is not suitable for a quick weekday lunch. The plan must match the cook's ability and available time.
5. **Equipment Available:** You cannot plan to bake a cake if you do not have an oven. The menu must be possible with the available kitchen tools (e.g., blender, cooker, freezer).
6. **Personal Preferences (Likes and Dislikes):** Meals should be enjoyed. There is no point planning a balanced meal of beans if the family refuses to eat it.
7. **Religious or Cultural Factors:** Some religions forbid certain foods (e.g., pork in Islam, beef in Hinduism for some). These must be respected.
8. **Climate and Weather:** Hot, humid weather calls for light, refreshing meals (fruits, salads, light soups). Cold, rainy weather calls for hot, energy-dense meals (stews, porridges, *amala*).

EVALUATION

1. Define meal planning in your own words.
2. List and explain three reasons why meal planning is important.
3. What is the most important factor to consider when planning a meal?
4. Explain how "Seasonality" and "Time" affect meal planning.

ASSIGNMENT

1. Plan a two-course lunch menu for your family for one day.
2. Write a short justification for your menu based on at least three factors affecting meal planning (e.g., "I chose rice and stew because...").

WEEK 3: SPECIAL MENU – VEGETARIANS

3.1 TYPES OF VEGETARIANS

A vegetarian is a person who does not eat meat. However, there are many variations, as listed in the scheme:

1. **Vegan (or Strict Vegetarian):** Eats *no* animal products of *any* kind. This includes all meat, poultry, fish, dairy (milk, cheese, yoghurt), eggs, and often honey.
2. **Lacto-ovo-vegetarian:** Does *not* eat meat, poultry, or fish. *Does* eat dairy products ("lacto") and eggs ("ovo"). This is the most common type.
3. **Lacto-vegetarian:** Does *not* eat meat, poultry, fish, or eggs. *Does* eat dairy products.
4. **Ovo-vegetarian:** Does *not* eat meat, poultry, fish, or dairy. *Does* eat eggs.

Semi-Vegetarians (Often grouped with vegetarians but are not strictly): 5. **Pescatarian:**

Does *not* eat meat or poultry. *Does* eat fish, dairy, and eggs. 6. **Pollotarian:** Does *not* eat red meat or fish. *Does* eat poultry (chicken, turkey), dairy, and eggs. 7. **Flexitarian:** A person who eats a primarily vegetarian diet but *occasionally* eats meat or fish.

3.2 REASONS FOR VEGETARIANISM

1. **Religious Beliefs:** Many religions, such as Hinduism, Buddhism, and Seventh-day Adventism, promote vegetarianism.
2. **Ethical/Animal Welfare:** A moral objection to killing animals for food.
3. **Health:** Well-planned vegetarian diets are linked to lower rates of heart disease, high blood pressure, type 2 diabetes, and certain cancers.
4. **Environmental:** Raising livestock uses significantly more land, water, and energy and produces more greenhouse gases than growing plants.
5. **Economic:** Meat can be expensive. A diet based on grains and legumes is often cheaper.

3.3 PLANNING MEALS FOR VEGETARIANS

The key challenge is ensuring adequate intake of nutrients commonly found in meat.

- **Protein:**
 - **Challenge:** Plant proteins (except soy) are "incomplete" (missing one or more essential amino acids).
 - **Solution:** Eat **complementary proteins**. This means combining different plant protein groups to get all essential amino acids.
 - **Grains + Legumes:** (e.g., **Rice and Beans**, *Eba* and *Ewedu* with melon seeds, Peanut butter sandwich).
 - **Nuts/Seeds + Legumes:** (e.g., Hummus, bean salad with nuts).
 - **Sources:** Beans, lentils, *moi-moi*, *akara*, tofu, soy milk, nuts, seeds, *egusi* (melon seeds).
- **Iron:** Plant-based iron (non-heme) is harder to absorb.
 - **Solution:** Eat iron sources with **Vitamin C** (e.g., peppers, tomatoes, citrus) to boost absorption.
 - **Sources:** Dark leafy greens (*ugwu*, spinach), beans, fortified cereals.
- **Vitamin B12:** This is the most critical nutrient for **vegans**, as it is *only* found naturally in animal products.
 - **Solution (for Vegans):** Must consume B12-fortified foods (like soy milk, cereals) or take a B12 supplement.
- **Calcium:** (For vegans who don't eat dairy).
 - **Sources:** Fortified soy/almond milk, tofu, leafy greens (spinach, *efo*), sesame seeds.

Sample Day's Menu (Lacto-ovo-vegetarian):

- **Breakfast:** *Akara* (bean cakes) and *pap* (ogi) with milk.
- **Lunch:** Jollof rice with a large portion of vegetable salad and a boiled egg.
- **Dinner:** Yam porridge with *ugwu* and *egusi* (melon seed) soup.
- **Snack:** Yoghurt, roasted groundnuts.

EVALUATION

1. Differentiate between a "Vegan" and a "Lacto-ovo-vegetarian."

2. What is a "Pescatarian"?
3. State three reasons why a person might choose to be a vegetarian.
4. Explain the concept of "complementary proteins" and give one Nigerian food example.
5. What nutrient is of greatest concern for a strict vegan, and how can they get it?

ASSIGNMENT

1. Plan a three-course dinner (starter, main, dessert) for a **Vegan**. Ensure the menu is balanced.

WEEK 4: SPECIAL MENU – PREGNANT AND LACTATING WOMEN

4.1 NUTRITIONAL NEEDS OF PREGNANT WOMEN

Pregnancy is a period of intense growth. The mother's diet must support her own health and the development of the foetus, placenta, and amniotic fluid, as well as her increased blood volume.

- **Energy (Calories):** Needs increase, but not as much as "eating for two." A small increase (approx. 300 kcal/day) is needed, mostly in the 2nd and 3rd trimesters. The *quality* of food is more important than the *quantity*.
- **Key Nutrients:**
 - **Folic Acid (Folate):** *Crucially important* before and during the first 12 weeks. It prevents neural tube defects (like spina bifida) in the developing baby.
 - *Sources:* Dark leafy greens (*ugwu*, spinach), beans, fortified cereals, oranges.
 - **Protein:** Needs increase significantly for building new tissues (baby's muscles, placenta).
 - *Sources:* Meat, fish, eggs, beans, dairy, soy.
 - **Iron:** Needs *double* to make extra blood (haemoglobin) for both mother and baby and to prevent anaemia.
 - *Sources:* Red meat, liver (cooked well), *ugwu*, beans. (Eat with Vitamin C to aid absorption).
 - **Calcium & Vitamin D:** Essential for the baby's developing bones and teeth, and to protect the mother's bone density.
 - *Sources:* Milk, yoghurt, cheese, sardines (with bones), tofu.

4.2 NUTRITIONAL NEEDS OF LACTATING MOTHERS (Breastfeeding)

Producing breast milk is *more* energy-demanding than pregnancy.

- **Energy (Calories):** Needs are *higher* than during pregnancy (approx. 500 kcal/day extra). This energy goes directly into milk production.
- **Protein & Calcium:** Remain high to ensure the milk is nutritious.

- **FLUIDS:** *Critically important.* A lactating mother must drink *a lot* of water, *pap*, soups, etc., to stay hydrated and maintain milk supply. Dehydration is the fastest way to reduce milk.

4.3 GUIDELINES FOR PLANNING MEALS

1. **Variety:** Eat a wide variety of foods from all food groups.
2. **Nutrient-Dense Foods:** Choose foods rich in nutrients, not "empty calories" (e.g., choose *moi-moi* over a doughnut).
3. **Food Safety:** Pregnant women are vulnerable to food poisoning.
 - *Avoid:* Raw/undercooked eggs (Salmonella), raw/undercooked meat, pâté, unpasteurized milk, and soft cheeses (Listeria).
 - *Limit:* Caffeine, and avoid alcohol completely.
4. **Listen to Cravings/Aversions:** These are common. Cravings are fine in moderation, but aversions (e.g., to the smell of meat) may require finding alternative nutrient sources (e.g., beans for protein).
5. **For Lactating Mothers:** Drink to thirst (usually 2-3 litres/day). Continue eating a balanced diet.

EVALUATION

1. Why is Folic Acid essential during early pregnancy?
2. Which nutrient need *doubles* during pregnancy, and why?
3. Who needs more energy: a woman in her 3rd trimester or a lactating mother? Why?
4. List two "food safety" rules a pregnant woman must follow.

ASSIGNMENT

1. Plan a day's menu (breakfast, lunch, dinner, and two snacks) for a pregnant woman in her second trimester.

WEEK 5: SPECIAL MENU – INFANTS AND TODDLERS

5.1 INFANTS (0–12 MONTHS)

This stage is defined by the fastest growth rate in human life.

- **0–6 Months:**
 - **Nutritional Needs:** All needs are met by **breast milk** (or infant formula).
 - **Guidelines:** *Exclusive breastfeeding* is recommended. This means no water, no *agbo*, no other liquids or foods. Breast milk provides perfect nutrition, hydration, and antibodies.
- **6–12 Months (Weaning):**
 - **Characteristics:** Breast milk is no longer enough to meet all energy, iron, and zinc needs. The "weaning" or "complementary feeding" process begins.
 - **Guidelines:**
 1. **Start Smooth:** Begin with single-ingredient smooth purées (e.g., mashed yam, mashed avocado, puréed carrot, *pap - ogi*).
 2. **One at a Time:** Introduce new foods 3-4 days apart to check for allergies.
 3. **Texture Progression:** Gradually move from smooth purées to lumpy, then to soft, mashed family foods (e.g., soft *eba* with *okro* soup, soft rice).
 4. **Key Foods:** Include iron-rich foods (puréed meat/fish, beans) and energy-dense foods (add a little oil or groundnut paste to *pap*).
 5. **Foods to AVOID:**
 - **Honey:** (Risk of infant botulism - very dangerous).
 - **Salt:** (Kidneys are too immature to handle it).
 - **Sugar:** (Not needed, causes tooth decay).
 - **Choking Hazards:** (Whole nuts, whole grapes, hard sweets).

5.2 TODDLERS (1–3 YEARS)

- **Characteristics Affecting Needs:**
 1. **Slower Growth:** Growth rate slows down, so appetite *decreases* (this is normal, but worries parents).

2. **Small Stomachs:** They cannot eat large meals.
 3. **High Activity:** They are constantly moving.
 4. **Fussy Eating (Neophobia):** They develop strong opinions and may suddenly refuse foods they liked before.
- **Nutritional Needs:** High need for energy, protein, calcium (bones), and iron (brain development).
 - **Guidelines for Planning Meals:**
 1. **Small, Frequent Meals:** 3 small meals + 2-3 healthy snacks is better than 3 large meals.
 2. **Nutrient-Dense:** Make every bite count. (e.g., snacks like yoghurt, fruit, boiled egg, not just biscuits).
 3. **Patience with Fussy Eaters:** Do not force-feed. Offer variety, keep offering refused foods, and make food *fun* (colours, shapes).
 4. **Hydration:** Offer water frequently. Limit sugary juices and drinks.

EVALUATION

1. What is "exclusive breastfeeding," and for how long is it recommended?
2. Why must honey *never* be given to an infant under 1 year old?
3. State three characteristics of toddlers that affect their eating habits.
4. What is the best way to serve meals to a toddler? (e.g., 3 large meals or 5 small meals). Why?

ASSIGNMENT

1. Create a "texture progression" plan for an infant. Describe a suitable meal for a 6-month-old, an 8-month-old, and a 10-month-old.

WEEK 6: SPECIAL MENU – ADOLESCENTS (13–19 YEARS)

6.1 CHARACTERISTICS OF ADOLESCENTS

This is the second-fastest growth period, the "**adolescent growth spurt.**"

1. **Rapid Physical Growth:** Huge increases in height and weight.
2. **Hormonal Changes:** Puberty affects metabolism and body composition.
3. **Active/Hectic Lifestyle:** School, sports, and social life can lead to irregular meals.
4. **Peer Pressure:** Food choices are heavily influenced by friends, often leading to preferences for "junk food" (fast food, sugary drinks, processed snacks).
5. **Body Image Concerns:** Can lead to unhealthy dieting, skipping meals, or eating disorders.
6. **Common Bad Habits:** Skipping breakfast, high intake of "empty calories," low intake of fruits and vegetables.

6.2 NUTRITIONAL REQUIREMENTS OF ADOLESCENTS

Nutrient needs are at their *peak* during these years.

- **Energy (Calories):** Extremely high, especially for active boys, to fuel the growth spurt.
- **Protein:** High need for building new muscle and tissue.
- **Calcium & Vitamin D:** *Critically important.* This is when **Peak Bone Mass** is built. The "bone bank" for the rest of their life is being filled. Inadequate calcium now leads to osteoporosis (brittle bones) in old age.
- **Iron:** Needs increase dramatically.
 - **For Boys:** To support muscle growth.
 - **For Girls:** *Extremely* high need, to replace iron lost during menstruation. Adolescent anaemia is very common.
- **Zinc:** Important for growth and sexual maturation.

6.3 PLANNING A DAY'S MENU FOR ADOLESCENTS

1. **Never Skip Breakfast:** A good breakfast (e.g., whole-grain bread with egg, *pap* and *akara*, oats) is essential for concentration at school.
2. **Focus on Snacks:** Adolescents graze. Ensure snacks are *healthy* and *nutrient-dense*, not "junk."
3. **Limit Sugary Drinks:** These are "empty calories" that contribute to obesity and provide no nutrition. Encourage water.
4. **Address Nutrient Gaps:** Ensure meals include iron-rich (meat, beans, *ugwu*) and calcium-rich (milk, yoghurt, *nunu*, sardines) foods.

Sample Day's Menu (Active Adolescent):

- **Breakfast:** 2 slices of whole-wheat bread, 2 scrambled eggs, and a glass of milk.
- **Snack 1 (Mid-morning):** A banana and a handful of roasted groundnuts.
- **Lunch:** *Jollof* rice with chicken and a side of vegetable salad or *moi-moi*.
- **Snack 2 (After-school):** A yoghurt.
- **Dinner:** A large portion of *Eba* with *Egusi* soup (rich in vegetables and fish).

EVALUATION

1. Why are the energy and protein needs of adolescents so high?
2. Explain the importance of Calcium during adolescence. What is "peak bone mass"?
3. Why are adolescent girls at a particularly high risk for iron-deficiency anaemia?
4. List three common "bad eating habits" of adolescents.

ASSIGNMENT

1. Keep a 24-hour food diary of everything you (as an adolescent) eat and drink.
2. Analyse your diary. Are you meeting your needs for Calcium and Iron? What "junk foods" could you swap for healthier snacks?

WEEK 7: MID-TERM TEST / OPEN DAY / MID-TERM BREAK

(This week is for assessment of weeks 1-6 and mid-term break. No new notes.)

WEEK 8: SPECIAL MENU – AGED / ELDERLY (SENIOR CITIZENS)

8.1 NUTRITIONAL REQUIREMENTS OF AGED AND ELDERLY

This group has unique and often opposite needs compared to adolescents.

- **Energy (Calories):** Needs **DECREASE**.
 - *Why?* Metabolism (BMR) slows down with age, and they are generally less physically active.
 - *Problem:* If they continue eating the same amount as when they were 30, they will gain weight (obesity).
- **Nutrient Needs (Protein, Vitamins, Minerals):** Needs **STAY THE SAME or INCREASE**.
 - *Protein:* Still needed to prevent muscle loss (sarcopenia).
 - *Calcium & Vitamin D:* Increased need to prevent osteoporosis.
 - *Vitamin B12:* Absorption decreases, so needs increase.
- **The Key Principle: Nutrient-Dense Foods.** They must get all their nutrients from *less* food (fewer calories). They cannot "waste" calories on junk food.

8.2 FACTORS INFLUENCING APPETITE AND EATING HABITS

Planning for the elderly is often more about *overcoming barriers* to eating.

1. Physiological:

- **Dental Issues:** Poor teeth, dentures, or sores make chewing difficult.
- **Reduced Senses:** Sense of taste and smell decline, making food seem bland and unappetizing.
- **Constipation:** A very common problem due to a less active digestive system.

2. Psychological:

- **Loneliness/Depression:** Eating alone (e.g., after a spouse dies) reduces the motivation to cook or eat.
- **Dementia/Forgetfulness:** May forget to eat or drink.

3. Economic/Social:

- **Poverty:** A pension may not be enough for good food.
- **Physical Difficulty:** May be unable to shop, carry heavy bags, or stand and cook for long.

4. **Medical:**

- **Medication:** Many medications can cause nausea, dry mouth, or affect appetite.

Guidelines for Planning:

1. **Soft, Easy-to-Chew Foods:** (e.g., *Amala*, *Okro* soup, minced meat, yam porridge, soft-cooked fish).
2. **High Fibre and Fluids:** To prevent constipation (e.g., oats, fruits, vegetables, soups, water).
3. **Flavourful:** Use herbs and local spices to make food more appealing (as taste buds are dull).
4. **Small, Frequent Meals:** A large plate can be overwhelming. 5-6 small snacks/meals are often better.

EVALUATION

1. Why do the energy (calorie) needs of the elderly decrease?
2. What is "nutrient density," and why is it the most important principle for feeding the elderly?
3. List three *different* types of factors that can cause a poor appetite in an elderly person.
4. What two things are essential to prevent constipation in the aged?

ASSIGNMENT

1. Plan a day's menu for an 80-year-old man who has difficulty chewing.

WEEK 9: SPECIAL MENU – MANUAL AND SEDENTARY WORKERS

9.1 DIFFERENCES BETWEEN WORKERS

This menu planning is based on **occupation** and **activity level**.

- **Manual Worker:**

- **Definition:** A person whose job requires significant physical labour, strength, and stamina.
- **Examples:** Bricklayer, construction worker, farmer, factory worker, commercial bus conductor.
- **Nutritional Needs:**
 - **Energy (Calories):** *Extremely high*. They burn thousands of calories.
 - **Carbohydrates:** *Very high*. This is their main fuel. Complex carbs (like *garri*, yam, rice) are needed for sustained energy.
 - **Protein:** High, for muscle repair and maintenance.
 - **Fluids (Water):** *Critically high* to replace sweat loss and prevent dehydration.

- **Sedentary Worker:**

- **Definition:** A person whose job involves sitting for most of the day with little physical activity.
- **Examples:** Banker, office secretary, computer programmer, writer, receptionist, taxi driver.
- **Nutritional Needs:**
 - **Energy (Calories):** *Low*. They do not burn many calories.
 - **Problem:** High risk of obesity, type 2 diabetes, and heart disease if they eat like a manual worker.
 - **Key:** Must eat *nutrient-dense* but *low-calorie* meals. Focus on portion control.

9.2 SUITABLE DISHES FOR EACH GROUP

- **Menu for a Manual Worker (Focus: High Energy & Protein):**

- **Breakfast:** A large portion of yam and egg stew.
- **Lunch:** A large portion of *Eba* with *Egusi* soup (rich in fish and meat).
- **Dinner:** Rice and beans with a rich beef stew.
- **Menu for a Sedentary Worker (Focus: Portion Control, High Fibre, Low Calorie):**
 - **Breakfast:** A small portion of oats with fruit.
 - **Lunch:** Grilled fish with a large portion of vegetable salad.
 - **Dinner:** A small portion of *Amala* with a large bowl of *Okro* soup (light on oil, high in fish).

EVALUATION

1. Define "Manual Worker" and "Sedentary Worker," giving two examples of each.
2. What is the *main* nutritional difference between these two groups?
3. What are the long-term health risks for a sedentary worker with a poor diet?
4. Plan a suitable *lunch* for (a) a bricklayer and (b) a bank manager. Justify your choices.

ASSIGNMENT

1. Interview two adults in your life: one with a manual job and one with a sedentary job. Ask them what they typically eat for lunch. Write down your findings and comment on whether their meals are appropriate for their job.

WEEK 10: SPECIAL MENU – DIABETIC AND HYPERTENSIVE PATIENTS

10.1 DIABETIC PATIENTS (DIABETES MELLITUS)

- **Explanation:** A chronic condition where the body cannot regulate **blood sugar (glucose)** levels, usually because the body doesn't produce enough insulin or doesn't use it properly (Type 2).
- **Goal of Diet:** To *control* blood sugar levels and prevent "spikes."
- **Guidelines for Planning Meals:**
 1. **Control Carbohydrates:** This is the *key*.
 - It does *not* mean "no carbs." It means *portion control* (e.g., a small, measured wrap of *amala*, not a huge one).
 - It means choosing **Complex, High-Fibre Carbs** (like beans, oats, brown rice, whole grains) over simple, sugary carbs (like soft drinks, cake, sweets). Fibre *slows down* the release of sugar into the blood.
 2. **Limit Sugars:** Avoid all sugary drinks, fruit *juice* (eat the whole fruit instead), and processed sweets.
 3. **Low Fat:** (Especially saturated fat) Diabetes increases heart disease risk, so a low-fat diet is essential.
 4. **Consistent Meal Times:** Skipping meals can cause blood sugar to drop dangerously (hypoglycaemia).

10.2 HYPERTENSIVE PATIENTS (HIGH BLOOD PRESSURE)

- **Explanation:** A condition where the force of blood against the artery walls is consistently too high, straining the heart and blood vessels.
- **Goal of Diet:** To *lower* blood pressure.
- **Guidelines for Planning Meals (Based on the "DASH" Diet):**
 1. **LOW SODIUM (SALT):** *This is the most important rule.*
 - Sodium makes the body retain water, increasing blood volume and pressure.

- *Avoid:* Table salt, stock cubes (Maggi, Knorr), *ajinomoto* (MSG), processed meats (sausages, bacon), and canned foods.
 - *Solution:* Cook with natural spices and herbs (onions, garlic, ginger, *uziza*, *iru*).
2. **High Potassium:** This mineral *actively helps to lower* blood pressure.
 - *Sources:* Bananas, potatoes, yams, leafy greens, beans.
 3. **High Calcium & Magnesium:** Also help regulate blood pressure.
 - *Sources:* Low-fat dairy, nuts, leafy greens.
 4. **Low Fat & Limit Alcohol:** Both contribute to high blood pressure.
- **Note:** The two diets are very similar (low fat, low sugar, high fibre, high in vegetables). Many patients have both conditions, so the diets work well together.

EVALUATION

1. What is the main goal of a diabetic diet?
2. What is the difference between "complex carbs" and "simple carbs"? Give an example of each.
3. What is the *single most important* dietary rule for a hypertensive patient?
4. Why are stock cubes (like Maggi) bad for a person with high blood pressure?
5. Name a mineral that can help *lower* blood pressure.

ASSIGNMENT

1. Plan a one-day menu (3 meals) for a patient who has *both* diabetes and hypertension.

WEEK 11: SPECIAL MENU – INVALID AND CONVALESCENT

11.1 MEANING OF INVALID AND CONVALESCENT

- **Invalid:** A person who is ill or disabled by a *chronic* (long-term) disease or condition. They may be bed-ridden for a long time.
 - *Examples:* A stroke patient, a person with severe arthritis, a permanently disabled person.
- **Convalescent:** A person who is *recovering* from an *acute* (short-term) illness, surgery, accident, or fever.
 - *Examples:* A person recovering from malaria, a person recovering from surgery, a new mother after childbirth.

11.2 GUIDELINES FOR PLANNING MEALS

- **For an Invalid (Maintenance and Prevention):**
 - **Goal:** To maintain a healthy weight, prevent muscle loss, and prevent complications.
 - **Nutrients:** Needs are usually normal, but *protein* is vital to prevent bedsores.
 - **Complications:** **Constipation** is a major problem from lack of movement.
 - **Guidelines:**
 1. **High Fibre and Fluids:** To prevent constipation.
 2. **Adequate Protein:** For skin health.
 3. **Easy-to-Eat:** Food may need to be soft or even puréed if they have difficulty swallowing.
 4. **Variety:** To prevent boredom.
- **For a Convalescent (Rebuilding and Repair):**
 - **Goal:** To *regain strength*, *rebuild* damaged tissues, and *replenish* lost nutrients.
 - **Nutritional Needs:** Needs are *very high*.
 1. **High Protein:** *Essential* for tissue repair, wound healing, and rebuilding muscles.
 2. **High Energy:** To regain lost weight.

3. **High Vitamins/Minerals:** Especially **Vitamin C** (for wound healing) and **Iron** (to replace lost blood).
4. **High Fluids:** To rehydrate after fever or illness.
- **Guidelines:**
 1. **Light and Easily Digestible:** The digestive system is still weak. Avoid heavy, oily, or spicy foods.
 2. **Tempt the Appetite:** Appetite is often poor. Food *must* be attractive, well-presented, and flavourful (but not spicy).
 3. **Small, Frequent Meals:** Better than 3 large meals.

11.3 SAMPLE MENUS (CONVALESCENT)

- **Breakfast:** *Pap (ogi)* enriched with milk and a little sugar.
- **Mid-morning:** An egg flip (beaten egg, milk, sugar) or warm milk drink.
- **Lunch:** Light chicken broth with soft-cooked rice.
- **Afternoon:** Fresh orange juice.
- **Dinner:** Poached fish with mashed yam.
- **Bedtime:** A malted drink.

EVALUATION

1. Differentiate clearly between an "invalid" and a "convalescent."
2. What is the *primary* nutritional goal for a convalescent patient?
3. Why is high protein intake so important for *both* invalids and convalescents? (Give two different reasons).
4. Why should meals for a convalescent be "light and easily digestible"?
5. List three suitable dishes for a person recovering from a severe fever.

ASSIGNMENT

1. You are a caterer at a hospital. A patient has just had major surgery. Plan their meals for the first 24 hours after they are allowed to eat solid food.

WEEK 12: REVISION

- **General Review:** This week is dedicated to a comprehensive review of the entire term's work. The central theme is **Meal Planning** and its application to **Special Menus**.
- **Key Concepts:**
 - **Meal Planning:** Importance (Nutrition, Budget, Time, Variety) and Factors (Needs, Cost, Season, Skills).
 - **Vegetarians:** Types (Vegan, Lacto-ovo), Reasons, and planning for "Complementary Proteins."
 - **Pregnant/Lactating:** High needs for Folic Acid, Iron, Calcium. Lactating needs *more* energy.
 - **Infants/Toddlers:** 0-6 months (exclusive breastfeeding), 6-12 months (weaning, no honey/salt), Toddlers (fussy eaters, small/frequent meals).
 - **Adolescents:** High energy/protein needs, "Peak Bone Mass" (Calcium), Iron (especially girls).
 - **Aged/Elderly:** *Lower* energy needs, *higher* nutrient needs (Nutrient-Dense). Overcoming barriers (chewing, loneliness, constipation).
 - **Workers:** Manual (High Energy) vs. Sedentary (Low Energy, portion control).
 - **Patients:**
 - **Diabetic:** Control carbs (high fibre, low sugar).
 - **Hypertensive:** *LOW SODIUM* (no stock cubes), high potassium.
 - **Invalid/Convalescent:** Invalid (maintain, prevent constipation), Convalescent (rebuild, high protein, easy-to-digest).
- **Final Exam Preparation:** Practice planning one-day menus for each of the special groups covered.

SS3 CATERING AND CRAFT PRACTICE LESSON NOTES

SECOND TERM

WEEK 1: RESUMPTION TEST / REVISION

1.1 RESUMPTION TEST

(This session begins with a test set by the teacher to assess retention of First Term's work. Questions will focus on meal planning, nutritional needs, and the various special diets for different groups (vegetarians, invalids, diabetics, adolescents, etc.).)

1.2 RECALLING PREVIOUS KNOWLEDGE RELEVANT TO NEW TERM'S WORK

Welcome to the Second Term. The First Term focused on **WHO** we are feeding (the guest/client) and **WHAT** we are feeding them (special menus). This Second Term shifts focus to the **ENVIRONMENT** and **SERVICE** in which the guest is hosted. We move from the *kitchen* to the *guest-facing* areas of a hospitality establishment.

Key Concepts from First Term to Remember:

- **Art of Entertainment & Table Etiquette:** Our work on parties, table setting, and guest-host relationships is the foundation for this term. The "receptionist" and "front office" are professional extensions of the "host."
- **Catering to Special Needs:** We learned that every guest is different (diabetic, vegetarian, elderly). This same principle of *personalization* and *attention to detail* is the core of housekeeping and front office work. A good housekeeper will note a guest's preference; a good receptionist will record it.
- **Professionalism:** The standards of hygiene, presentation, and service we discussed for food are now applied to rooms and guest interactions.

This term, we explore the two key departments that define a guest's experience: **Housekeeping** (the comfort and cleanliness of the room) and the **Front Office** (the first and last impression).

WEEK 2: HOUSEKEEPING DEPARTMENT

2.1 MEANING OF HOUSEKEEPING

The **Housekeeping Department** is a vital department in any hotel or hospitality establishment, responsible for maintaining the highest standard of cleanliness, orderliness, comfort, and aesthetic appeal in all guest rooms and public areas.

It is more than just "cleaning." Housekeeping is the "eyes and ears" of the hotel. It prepares the primary product the hotel sells: **a clean, safe, and comfortable room**. The work of this department directly impacts guest satisfaction, guest retention, and the hotel's reputation.

2.2 AREAS OF HOUSEKEEPING (ORGANISATIONAL STRUCTURE)

The department is a complex operation with several key areas:

1. **Guest Rooms / Floors:** This is the main area. Room Attendants (or "maids") are responsible for the daily cleaning, servicing, and preparation of guest rooms.
2. **Public Areas (PA):** This includes all areas open to the public, such as the lobby, lounges, public restrooms, restaurants, bars, corridors, and elevators. A separate "PA Crew" (often Housemen) typically handles this.
3. **Linen Room / Laundry:**
 - **Linen Room:** The central hub for all hotel textiles. It is responsible for storing, inventorying, and issuing clean linen (bed sheets, towels, tablecloths) to floors and restaurants.
 - **Laundry:** Many large hotels have an on-premise laundry (OPL) for washing, drying, ironing, and folding linen, towels, guest clothing, and staff uniforms.
4. **Housekeeping Control Desk:** This is the "nerve centre" or "brain" of the department. It is staffed 24/7 and:
 - Handles all communication from the Front Office (e.g., room status: "clean," "dirty," "out of order").
 - Receives all guest requests (e.g., "extra towel," "ironing board").
 - Coordinates staff assignments.

- Manages the "Lost and Found" property system.
- 5. **Horticulture / Gardens:** In many hotels, the landscaping, gardens, and all indoor flower arrangements are managed by the housekeeping department.

2.3 DUTIES AND RESPONSIBILITIES OF HOUSEKEEPING PERSONNEL

This is the typical hierarchy (may vary by hotel size):

- **Executive Housekeeper (Manager):**
 - The head of the department.
 - Manages the budget, hiring, and training of all staff.
 - Sets the standards for cleanliness.
 - Purchases all linen, equipment, and cleaning supplies.
 - Liaises with other department heads (especially Front Office and Maintenance).
- **Assistant Housekeeper:**
 - Supports the Executive Housekeeper.
 - Often responsible for daily operations, staff scheduling, and inspections.
- **Floor / Housekeeping Supervisor:**
 - Manages a specific floor or section of the hotel.
 - **Crucial Duty:** Inspects every "clean" room *before* its status is given to the Front Office, ensuring it meets the hotel standard.
 - Trains and supervises the Room Attendants.
- **Room Attendant (Cleaner / Maid):**
 - The "heart" of the department.
 - Responsible for cleaning and servicing a quota of guest rooms per shift (e.g., 10-15 rooms).
 - Duties include: stripping beds, making beds, cleaning bathrooms, dusting, vacuuming, and replenishing all supplies (soap, towels, water).
- **Houseman / Porter:**
 - Responsible for heavy-duty tasks.
 - Cleans public areas (e.g., mopping lobby, polishing elevators).

- Helps Room Attendants move heavy items (like rollaway beds) or clear heavy trash.
- Sometimes handles linen delivery to floors.
- **Linen Room Attendant:**
 - Manages the inventory of all linen.
 - Issues clean linen, receives and counts dirty linen.
 - Manages staff uniforms.
 - Often responsible for basic sewing repairs.

EVALUATION

1. Define "Housekeeping" in the context of the hotel industry.
2. What is the "Housekeeping Control Desk," and why is it called the "nerve centre"?
3. List the three main areas of responsibility for a Room Attendant.
4. Differentiate between the roles of an Executive Housekeeper and a Floor Supervisor.

ASSIGNMENT

1. Draw a simple organisational chart for a medium-sized hotel's housekeeping department, showing the relationship between the Executive Housekeeper, Floor Supervisor, Room Attendant, and Houseman.

WEEK 3: BED MAKING

3.1 MEANING OF BED MAKING

Bed Making is the art and skill of preparing a bed for a guest. In a hotel, a bed is the *central product* the guest is paying for. It must not only be clean but also *look* clean, comfortable, and inviting.

A well-made bed is:

- **Hygienic:** All linen is fresh and clean.
- **Comfortable:** Sheets are smooth and taut (tight), with no wrinkles.
- **Appealing:** Looks neat, crisp, and welcoming.
- **Standardized:** Made in the exact same way in every room, every time.

3.2 TYPES OF BED (SIZES AND CONFIGURATIONS)

1. **Single:** One bed, built for one person (common in hostels).
2. **Twin:** A room with *two separate single beds*.
3. **Double:** One bed, built for two people (becoming less common).
4. **Queen:** A more comfortable, wider bed for two people (very common).
5. **King:** The largest and widest standard bed.
6. **Sofa Bed (Pull-out):** A sofa that converts into a bed.
7. **Z-Bed (Rollaway):** A portable, single bed that can be "rolled" into a room for an extra guest.
8. **Cot / Crib:** A small, safe bed for an infant.

3.3 BED LINEN

These are the items used to "dress" a bed, listed in order of application:

1. **Mattress Protector (or Pad):** A cover that fits over the mattress to protect it from stains and sweat. It is quilted for comfort.
2. **Bottom Sheet:** The sheet the guest lies on. Can be **Fitted** (with elastic corners) or **Flat**.

3. **Top Sheet:** The sheet the guest uses to cover themselves.
4. **Blanket:** Provides warmth (placed between the top sheet and the bedspread).
5. **Bedspread / Duvet (Comforter):** The final, decorative top cover.
 - **Bedspread:** A traditional, single woven cover.
 - **Duvet:** A "bag" filled with feathers or synthetic fibre, which is then put into a removable, washable **Duvet Cover**. (This is more hygienic and common today).
6. **Pillows:** The cushions for the head.
7. **Pillowcase:** The removable, washable cover for the pillow.
8. **Pillow Protector:** A zipped cover that goes under the pillowcase to protect the pillow.
9. **(Optional) Bed Runner:** A decorative strip of fabric at the foot of the bed.

3.4 PROCEDURES FOR BED MAKING (STANDARD UNOCCUPIED BED)

This procedure is for a "departure room" where a guest has checked out.

1. **Get Ready:** Wash hands. Bring a clean set of all required linen.
2. **Strip the Bed:**
 - Remove all soiled (dirty) linen.
 - Roll it all together in a bundle, holding it *away* from your uniform.
 - *Never* shake dirty linen (spreads germs). *Never* place it on the floor. Place it directly in the linen bag.
3. **Air the Mattress:** If possible, let the mattress "breathe" for a few minutes while you clean the bathroom.
4. **Check Mattress Protector:** Ensure it is clean and not stained. Change if necessary.
5. **Bottom Sheet:**
 - Lay the clean bottom sheet on the mattress.
 - If flat, tuck it in securely at the top and bottom.
 - Create "**Mitered Corners**" at the head of the bed. This is a neat, 45-degree angled fold (like a hospital corner) that locks the sheet in place.
 - Tuck in the sides tightly.
6. **Top Sheet:**

- Lay the top sheet **wrong side up** (so the smooth, "right" side touches the guest when they pull it up).
- Align the top edge with the mattress head.
- 7. **Blanket:** Lay the blanket on top, leaving about 6-8 inches of space from the top.
- 8. **Bedspread / Duvet:** Lay it evenly over the blanket.
- 9. **Turn Down:** Fold the top sheet *over* the blanket and bedspread, creating a neat "turn down" band for the guest to get into.
- 10. **Tuck In:** Tuck the top sheet, blanket, and bedspread in together at the *foot* of the bed, creating mitered corners for a very neat finish. The sides are often left to hang straight.
- 11. **Pillows:**
 - Put clean pillowcases on (fold pillow, slide case on, *never* "stuff" or hold case in your teeth).
 - Fluff the pillows.
 - Place them neatly at the head of the bed.

EVALUATION

1. What is a "mitered corner," and why is it used?
2. Differentiate between a "Twin" bed and a "Double" bed.
3. List the bed linen items in the correct order of application, from the mattress up.
4. Why should a room attendant never shake dirty linen?

ASSIGNMENT

1. Describe the difference between making an "unoccupied bed" (for a new guest) and providing "turndown service" (preparing the bed for an existing guest to sleep in at night).

WEEK 4: PRACTICAL / PROJECT ON BED MAKING

4.1 OBJECTIVE

To apply the knowledge from Week 3 and demonstrate the ability to make a bed to a professional, hygienic, and aesthetic hotel standard.

4.2 DEMONSTRATION

(The teacher will first demonstrate the full procedure, step-by-step, emphasizing:

- *Efficiency (how to move around the bed to save time).*
- *Hygiene (handling clean vs. soiled linen).*
- *The Mitered Corner technique.*
- *The final "look" (smooth, taut, and appealing).)*

4.3 PRACTICAL: STUDENT PRACTICE

Students will be divided into groups or work individually (if beds are available) to practice the full "strip and remake" procedure.

4.4 PROJECT: OBSERVATION CHECKLIST

As a project, students will "supervise" and "inspect" each other's work using a standard Hotel Inspection Checklist.

PRACTICAL OBSERVATION CHECKLIST

- **Student Name:**
- **Inspector Name:**

Standard	Yes / No	Comments
Preparation		
1. Soiled linen handled hygienically (not on floor, not shaken)		
2. Mattress protector checked and clean.		

Bottom Sheet		
3. Sheet is taut (tight) with no wrinkles.		
4. Mitered corners at the head are neat and tight.		
Top Linens		
5. Top sheet, blanket, and spread are evenly placed.		
6. "Turn down" at the head is even and neat.		
7. Mitered corners at the foot are neat and tight.		
Pillows		
8. Pillowcases are clean and put on correctly.		
9. Pillows are fluffed and placed neatly (e.g., standing up).		
Final Appearance		
10. Bed looks neat, appealing, and symmetrical.		

EVALUATION

1. *(Practical Assessment based on the checklist above).*
2. What was the most difficult part of the bed-making procedure?
3. Why is it important for the bottom sheet to be completely free of wrinkles?

ASSIGNMENT

1. Practice making your own bed at home using the mitered corner technique. Time yourself.
How long did it take?

WEEK 5: HOTEL RECEPTIONIST

5.1 MEANING OF RECEPTIONIST

A **Hotel Receptionist** (or Front Desk Agent) is the primary guest-facing professional in the Front Office department.

The Receptionist is the "face" of the hotel. They are often the first person a guest sees on arrival and the last person they see on departure. This role is crucial for:

- Guest welcome and registration (Check-in).
- Guest services and communication.
- Guest departure and payment (Check-out).
- Creating a lasting positive or negative impression.

5.2 QUALITIES OF A GOOD RECEPTIONIST

A receptionist must have a specific blend of personal, professional, and ethical qualities.

1. **Impeccable Personal Grooming:** Must be neat, clean, and in a smart uniform. This builds guest confidence.
2. **Excellent Communication Skills:** Must speak clearly, politely, and professionally (in English and preferably other languages).
3. **Calmness Under Pressure:** The front desk is a high-stress area (phones ringing, guests waiting). The receptionist must *never* appear flustered.
4. **Problem-Solving Skills:** Must be able to handle guest complaints calmly and find solutions quickly.
5. **Tact and Diplomacy:** Must be able to say "no" politely (e.g., if a guest's request is impossible) without causing offence.
6. **Organisational Skills:** Must be able to multi-task (e.g., handle a check-in, answer the phone, and take a message simultaneously).
7. **Good Memory:** Remembering guest names and faces makes them feel valued.

8. **Honesty and Reliability:** They handle large amounts of cash, credit card details, and guest valuables.
9. **Discretion and Confidentiality:** Must *never* discuss guest information (e.g., who is in what room, what they are doing). This is a critical security rule.
10. **Local Knowledge:** Should be able to act as a source of information (e.g., "Where is the nearest bank?").
11. **Salesmanship:** A good receptionist will try to "upsell" (e.g., "For just N5,000 more, you can have a suite...").

5.3 RESPONSIBILITIES OF A RECEPTIONIST (THE GUEST CYCLE)

The duties follow the four stages of the guest's stay.

1. **Pre-Arrival:**
 - Handle reservations (by phone, email, or online).
 - Confirm bookings.
 - Allocate rooms in the Property Management System (PMS) software.
2. **Arrival (Check-in):**
 - Welcome the guest warmly.
 - Confirm the reservation details.
 - Handle guest registration (filling the form).
 - Verify identification and method of payment (take a deposit or credit card imprint).
 - Assign the room and issue the key (or key card).
 - Liaise with the bellboy to assist with luggage.
3. **Occupancy (During the Stay):**
 - Handle guest mail, messages, and parcels.
 - Answer guest questions and provide information.
 - Manage room change requests.
 - Handle guest complaints.
 - Post charges (e.g., from the restaurant) to the guest's bill.
4. **Departure (Check-out):**

- Retrieve the guest's bill (folio) from the system.
- Present the bill clearly and answer any questions.
- Process the final payment (cash, card, or post to a company account).
- Retrieve the room key.
- Thank the guest and wish them a safe journey.

EVALUATION

1. Why is the receptionist often called the "face of the hotel"?
2. List five *qualities* of a good receptionist.
3. What are the four main stages of a receptionist's responsibilities, based on the guest cycle?
4. Why is "Discretion" a vital quality for this role?

ASSIGNMENT

1. Role-play: Write a short script (10 lines) for a hotel receptionist handling a *complaint* from a guest whose room is not clean. The receptionist must be polite, calm, and find a solution.

WEEK 6: FRONT OFFICE

6.1 MEANING OF FRONT OFFICE

The **Front Office (FO)** is the department *at the front of the hotel* responsible for all guest services and transactions. It is the "nerve centre" or "command centre" for all hotel operations.

While the Reception Desk is the most visible part, the Front Office also includes other key personnel. It is the main point of communication between guests and all other departments (Housekeeping, Maintenance, Food & Beverage).

6.2 PERSONNEL IN FRONT OFFICE AND THEIR DUTIES

1. Front Office Manager (FOM):

- Head of the department.
- Manages and trains all FO staff.
- Manages room inventory and sets room rates (Yield Management).
- Handles high-level guest complaints.

2. Receptionist / Front Desk Agent:

- (As covered in Week 5). Handles check-in, check-out, and billing.

3. Concierge:

- The guest's "personal assistant."
- Responds to special requests.
- **Duties:** Booking tours, arranging transportation, confirming flights, recommending restaurants, handling luggage storage.

4. Bellboy / Porter:

- Handles guest luggage.
- Escorts guests to their rooms and explains the room features (TV, AC).
- Delivers messages and parcels.

5. Switchboard Operator (PBX Operator):

- Manages the hotel's main telephone system.
- Handles all incoming and outgoing calls.
- Manages guest wake-up calls.

6. Night Auditor:

- Works the overnight shift (e.g., 11 pm – 7 am).
- **Crucial Duty:** "Closes the day's business."
- They audit and cross-check all charges from all departments (restaurant, bar, room service) that were posted to guest bills.
- They "roll" the computer system over to the new day.
- They prepare the daily summary reports for the hotel manager.
- They also act as the sole receptionist for late check-ins.

6.3 ATTRIBUTES OF FRONT OFFICE PERSONNEL

All staff in this department must share these core attributes:

- **Professionalism:** A serious, efficient, and calm approach to work.
- **Teamwork:** The desk, concierge, and porters must work seamlessly.
- **Communication:** Information must be passed clearly and accurately.
- **Politeness:** Every guest must be treated with respect.
- **Poise:** The ability to remain calm and elegant, even when busy or stressed.
- **Helpfulness:** A "can-do" attitude, always willing to assist guests.

6.4 FRONT OFFICE ACTIVITIES (THE GUEST CYCLE REVIEWED)

This is a summary of all Front Office activities, organized by the guest's journey:

1. Pre-Arrival (Reservation Stage):

- Taking bookings (Reservations).
- Creating a guest file.
- Confirming requests (e.g., "king bed," "non-smoking").

2. Arrival (Check-in Stage):

- Welcoming the guest (Bellboy, Doorman).
- Registration (Reception).
- Key assignment and luggage handling (Reception, Bellboy).

3. Occupancy (Guest Stay Stage):

- Answering calls (Switchboard).
- Handling complaints and requests (Reception).
- Booking tours (Concierge).
- Managing guest accounts (posting charges).

4. **Departure (Check-out Stage):**

- Preparing the final bill (folio).
- Settling the account (Reception).
- Retrieving the key.
- Handling luggage (Bellboy).
- **Post-Departure:** The Night Auditor finalizes all accounts.

EVALUATION

1. Differentiate between the "Front Office" and the "Reception Desk."
2. What is the main duty of a "Concierge"?
3. What is the *most important* responsibility of the "Night Auditor"?
4. List the four stages of the Guest Cycle.
5. Why is "Teamwork" a critical attribute for Front Office staff?

ASSIGNMENT

1. Write a short job description (5-6 points) for ONE of the following roles:
 - a) Hotel Bellboy
 - b) Night Auditor

WEEK 7: MID-TERM BREAK

(No new lesson notes for this week.)

WEEKS 8–11: REVISION OF PAST QUESTIONS (WAEC & NECO FOCUS)

This period is dedicated to intensive revision for your final external examinations. The focus will be on understanding *how* questions are asked and *how* to answer them effectively.

8.1 STRATEGIES FOR ANSWERING EXAM QUESTIONS

- **Read the Question Carefully:** Underline the *key verbs* (e.g., "List," "Explain," "Describe," "Differentiate").
- **"List" or "State":** Requires only a short, itemized answer. Do not write an essay.
- **"Explain" or "Discuss":** Requires a detailed answer. You must give the "why" or "how" and use full sentences.
- **"Describe":...** Requires you to paint a picture in words. Use sequential, clear language (e.g., "Describe the procedure for bed making...").
- **"Differentiate":** You *must* show the difference, not just define the two items separately. A table is often a good way to answer.

8.2 SAMPLE QUESTIONS & FOCUS AREAS (THIS TERM'S WORK)

TOPIC 1: HOUSEKEEPING

- **Focus:** Roles, responsibilities, and structure.
- **Sample Essay Question 1:** (a) What is a housekeeping department? (b) Draw the organisational chart of the housekeeping department for a 100-room hotel.
- **Sample Essay Question 2:** (a) Who is a Room Attendant? (b) Explain five specific duties of a Room Attendant.
- **Sample Essay Question 3:** List and explain the functions of four *different* areas within the housekeeping department.
 - *Answer Hint:* (1. Guest Rooms, 2. Public Areas, 3. Linen Room, 4. Control Desk).
- **Sample Objective Question:** The "nerve centre" for communication in the housekeeping department is the: (a) Laundry (b) Linen Room (c) Control Desk (d) Executive Office
 - (*Answer: c*)

TOPIC 2: BED MAKING

- **Focus:** Procedure, hygiene, and terminology.
- **Sample Essay Question 1:** (a) List eight items of bed linen. (b) Describe, step-by-step, the procedure for making an unoccupied bed.
- **Sample Essay Question 2:** (a) What is a mitered corner? (b) Explain the importance of "hygiene" and "aesthetics" in bed making.
- **Sample Objective Question:** A hotel room with two separate single beds is described as a: (a) Double (b) Twin (c) Queen (d) Single
 - (Answer: b)

TOPIC 3: FRONT OFFICE & RECEPTIONIST

- **Focus:** Roles, qualities, and the guest cycle.
- **Sample Essay Question 1:** (a) Who is a hotel receptionist? (b) State five qualities of a good receptionist and explain *why* three of them are important.
- **Sample Essay Question 2:** List four key personnel in the Front Office (excluding the receptionist) and state the *main duty* of each.
 - *Answer Hint:* (1. FOM - Manages dept, 2. Concierge - Guest services, 3. Bellboy - Luggage, 4. Night Auditor - Closes accounts).
- **Sample Essay Question 3:** Explain the four stages of the "Guest Cycle" and state one activity the Front Office performs at each stage.
- **Sample Objective Question:** The hotel staff member responsible for booking tours and arranging transport is the: (a) Receptionist (b) Bellboy (c) Concierge (d) Night Auditor
 - (Answer: c)

8.3 REVISION OF KEY SS1–SS3 TOPICS

(You must also revise all previous work for your final exam. Use these weeks to practice questions from all major areas.)

- **Food & Nutrition:** Nutrients, cooking methods, food preservation.
- **Special Diets:** Vegetarians, Diabetics, Invalids, etc.

- **Hygiene & Safety:** Kitchen safety rules, food poisoning.
- **Equipment:** Identification and use of kitchen/bar equipment.

ASSIGNMENT

1. Obtain WAEC and NECO past question papers for Catering and Craft Practice.
2. Answer all questions (Essay and Objective) related to Housekeeping and Front Office from the last three years.
3. Time yourself. Practice writing clear, complete essay answers within the exam time limit.

WEEK 12: REVISION

- **Final Review:** This week is for a final, high-level review of the Second Term's work and any other challenging topics from previous terms.
- **Key Concepts Checklist:**
 - Can you define Housekeeping and its importance?
 - Can you draw the housekeeping organisational chart?
 - Can you list all 8-10 pieces of bed linen?
 - Can you describe the 11 steps of bed making?
 - Can you list 10 qualities of a good receptionist?
 - Can you explain the 4 stages of the guest cycle?
 - Can you differentiate between a Concierge, a Night Auditor, and a Receptionist?
- **Final Q&A:** This is the time to ask your teacher any remaining questions before the examination.
