

PRIMARY 6 PHYSICAL AND HEALTH EDUCATION SCHEME OF WORK

FIRST TERM

Week	Topic	Content
1	Physical Fitness and Body Conditioning I	Components of physical fitness - cardiovascular endurance, muscular strength, muscular endurance, flexibility, body composition; Assessing physical fitness levels; Importance of physical fitness for health; Setting fitness goals
2	Physical Fitness and Body Conditioning II	Cardiovascular exercises - running, jogging, swimming, skipping, cycling; Training principles - frequency, intensity, time, type (FITT); Monitoring heart rate and pulse; Progressive training; Recovery and rest importance
3	Physical Fitness and Body Conditioning III	Strength and muscular endurance training - push-ups, sit-ups, squats, lunges, planks; Proper form and technique; Core strengthening exercises; Upper and lower body exercises; Bodyweight training; Circuit training basics
4	Physical Fitness and Body Conditioning IV	Flexibility and stretching - static stretching, dynamic stretching; Major muscle groups stretching; Warm-up and cool-down routines; Preventing injuries; Balance and coordination exercises; Creating a personal fitness plan
5	MIDTERM EXAMINATION	Assessment of topics covered in weeks 1-4 - theory and practical fitness tests
6	MIDTERM BREAK	Rest and relaxation period
7	Athletics I - Track Events I	Track athletics overview; Sprint techniques - starting position, acceleration, running form, finishing; 100m, 200m, 400m races; Starting blocks usage; Relay

		races - baton passing techniques; 4×100m relay
8	Athletics I - Track Events II	Middle-distance running - 800m, 1500m; Pacing strategies; Breathing techniques; Long-distance running basics; Cross-country running; Marathon introduction; Training for endurance events; Race tactics
9	Athletics I - Hurdles and Specialized Events	Hurdle races - 100m hurdles, 110m hurdles, 400m hurdles; Hurdling technique - approach, clearance, landing; Rhythm and stride pattern; Steeplechase introduction; Race walking basics; Rules and regulations
10	Personal and Environmental Health I	Personal hygiene - daily bathing, oral hygiene, hair care, nail care; Grooming and appearance; Puberty hygiene - menstrual hygiene for girls, body changes; Skin care; Hand washing importance; Disease prevention through hygiene
11	REVISION	Review of all topics covered; Fitness assessments; Athletics practice; Health discussions; Question and answer sessions
12	EXAMINATION	End of term assessment - theory and practical
13	CLOSING	Report card distribution; Vacation assignment; Fitness goals for holiday

PRIMARY 5 PHYSICAL AND HEALTH EDUCATION LESSON NOTES

FIRST TERM

WEEK 1: CREATIVE RHYTHMIC ACTIVITIES I

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. Define creative rhythmic activities in simple terms.
2. Identify the three elements of rhythm (beat, tempo, pattern).
3. Demonstrate simple body movements to music.
4. Perform a basic coordination exercise involving hands and feet.

CONTENT

1. Meaning of Creative Rhythmic Activities

Creative rhythmic activities are fun movements we do with our bodies when we hear music, a drum, or even a clapping sound. It is like playing a game where your body follows the sound. Think about when you clap your hands to your favorite song, march during parade at school, or dance when you are happy. These are all rhythmic activities. We use our imagination to move in different ways, and it helps us show how we feel without using words. It also makes our bodies strong, healthy, and flexible.

2. Elements of Rhythm

To move well to music, we need to understand three important parts of the sound:

- **Beat:** This is the steady, repeating sound in music. It is like the "heart" of the song. Your heartbeat goes thump-thump, thump-thump. Music has a beat too, like the constant dum-dum, dum-dum you can tap your foot to. The beat tells us when to move.
 - **Example:** Imagine the sound of a clock ticking (tick-tock, tick-tock) or rain falling steadily on the roof (pitter-patter). That steady sound is the beat.
- **Tempo:** This is how fast or slow the beat is. It is the speed of the music.
 - **Fast tempo:** Music that makes you want to run, jump, or move quickly. Like when you hear a fast drum during a race.
 - **Slow tempo:** Music that makes you want to walk slowly, sway gently, or stretch. Like a calm lullaby sung to a baby.
- **Pattern:** This is a special order or design of sounds and silences. It is like a rhythm recipe. We repeat the pattern over and over.
 - **Example:** A clapping pattern could be: Clap - Clap - Stomp. We say it out loud and do it: "CLAP, CLAP, STOMP... CLAP, CLAP, STOMP." Another pattern could be: Snap - Clap - Snap - Clap.

3. Body Movements to Music

We can make different parts of our body "dance" to the rhythm. Let's try moving like this:

- **Head:** Nod your head "YES" (up and down). Shake your head "NO" (side to side).
- **Arms:** Swing your arms forward and backward like a pendulum clock. Stretch them up high like you're picking a mango, then down low like you're touching your toes.
- **Legs:** March on one spot, lifting your knees high. Hop on one foot like a bird. Take little slides to the side.
- **Trunk (Your Body's Center):** Bend forward to touch your toes, then stand tall. Gently twist your waist left and right as if you're looking behind you.

4. Simple Dance Steps and Coordination

Coordination means making two or more parts of your body work together at the same time smoothly. It is like rubbing your tummy and patting your head!

- **Let's try this exercise:** a. Step forward with your RIGHT foot. b. At the same time, CLAP your hands once in front of you. c. Now, step back with your LEFT foot. d. At the same time, SNAP the fingers on your right hand. Do this slowly at first, then try it faster!
- **Simple Dance:** We can put movements together. To the beat of a song: WALK four steps forward, then CLAP four times, TURN around in one spot, and finish with a big SMILE and arms open wide. This is a simple routine.

EVALUATION

1. What are creative rhythmic activities? Give one example you do at home.
2. The steady sound in music, like a heartbeat, is called the _____.
3. If the music is very fast, is the tempo fast or slow?
4. Show me a body movement you can do with your arms to a slow beat.
5. Why is it important for your hands and feet to work together in a dance?

ASSIGNMENT

1. **(Oral/Practical):** At home, listen to a song on the radio or TV for 2 minutes. March around your room to the beat. Tell your parent or guardian one thing you liked about the music.
2. **(Written):** Write down a simple definition of "Beat" in your own words.
3. **(Drawing/Practical):** Create your own rhythm pattern using claps and stamps (e.g., clap-stamp-clap). Draw three simple pictures (like a hand for clap, a foot for stamp) to show your pattern. Practice it.

WEEK 2: CREATIVE RHYTHMIC ACTIVITIES II

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. Mention three examples of traditional Nigerian dances.
2. Explain the importance of cultural rhythms.
3. Create a simple dance routine in a group.
4. Demonstrate expression through movement.

CONTENT

1. Traditional Nigerian Dances

Nigeria is rich with many cultures, and each has its own special way of dancing, especially during festivals, weddings, and celebrations. These dances tell stories and show our history.

- **Bata Dance:** This is a powerful and energetic dance from the Yoruba people. It is danced to the special talking drums called "Bata" drums. The dancers move their feet and bodies quickly and with great skill.
- **Atilogwu Dance:** This is a very energetic and acrobatic dance from the Igbo culture. Dancers jump very high, flip, and move with incredible strength and speed. It is often called the "Acrobatic Dance."
- **Swange Dance:** This is a graceful and flowing dance from the Tiv people in Benue State. Dancers move their shoulders and waist in a gentle, rolling motion to a calm, rhythmic beat.
- **Koroso Dance:** This is a popular dance from the Hausa/Fulani culture. Dancers wear rattles ('koroso') on their ankles and wrists, which make a shaking sound as they move their legs and arms in quick, happy steps.

2. Cultural Rhythms

Cultural rhythms are the special beats and patterns of music that belong to a particular community or ethnic group. They are like the musical fingerprint of that culture.

- **Importance:** a. **They tell stories:** The rhythms can tell stories about heroes, harvests, or important events from long ago. b. **They celebrate heritage:** When we dance to our cultural rhythms, we are celebrating who we are and where we come from. It makes us proud. c. **They bring unity:** During festivals, everyone comes together to dance to the same rhythm, creating a feeling of togetherness and joy.
- **Main Instrument:** The drum is the king of cultural rhythms. Different types like the Talking Drum, Djembe, and Gangan are used to create these amazing beats.

3. Creating Simple Dance Routines

A dance routine is a set of steps we put together in an order, like following a recipe for dance.

- **Formation:** This is how dancers stand as a group.
 - **Circle:** Dancers stand in a ring, facing the center. This shows unity and is common in many traditional dances.

- **Line:** Dancers stand one behind the other or side-by-side. Good for marching dances.
- **Square/Small Groups:** Dancers are in small clusters.
- **Let's create a 4-step routine together in a circle:** a. Step 1: Take two steps to the right (side-step). b. Step 2: Clap your hands twice above your head. c. Step 3: Turn around once on the spot. d. Step 4: End by bending your knees slightly with a big smile (this is your pose!).

4. Expression Through Movement

Dance is not just about steps; it is about using your body to show feelings, just like your face shows if you are happy or sad.

- **Happy Dance:** Movements are big, light, and bouncy. You might jump, skip, spin with arms wide open, and always smile!
- **Sad/Slow Dance:** Movements are small, heavy, and slow. You might walk slowly, look down, hug yourself, or sway gently from side to side.
- **Strong/Angry Dance:** Movements are sharp and powerful. You might stamp your feet firmly, make strong fists with your hands, and move with quick, bold gestures.

EVALUATION

1. Name one traditional dance from the Yoruba culture and one from the Igbo culture.
2. Why are drums so important in our cultural dances?
3. If dancers are standing in a ring all facing each other, what formation is that?
4. Show me with your body how you would move if you were dancing a "happy" dance.
5. Why is it important for us to know and sometimes perform our traditional dances?

ASSIGNMENT

1. **(Oral/Written):** Ask your parents or an older relative: "What is a traditional dance from our hometown or ethnic group?" Write down the name of the dance.
2. **(Drawing):** Draw a picture of dancers performing in a circle formation. Color it beautifully.

3. **(Practical):** Teach the 4-step dance routine we learned today to one person in your family.

WEEK 3: CREATIVE RHYTHMIC ACTIVITIES III

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. Define aerobic dance.
2. Perform rhythmic movements using a prop (ball or hoop).
3. Demonstrate freestyle creative movements.
4. Execute a short rhythmic sequence.

CONTENT

1. Aerobic Dance Movements

Aerobic dance is a fun way to exercise by dancing! The word "aerobic" means "with oxygen." It is dancing that makes your heart beat faster, your lungs breathe deeper, and makes you sweat a little. It keeps your heart and lungs very healthy and strong.

- **Common Movements:**
 - **High Knee Lifts:** Marching on the spot but lifting your knees as high as your waist.
 - **Jumping Jacks:** Start with feet together and hands at your sides. Jump to spread your feet wide while clapping your hands above your head. Jump back to start.
 - **Side-to-Side Steps:** Step to the right with your right foot, bring left foot to meet it. Then step to the left with your left foot, bring right foot to meet it.
 - **Brisk Marching:** Marching quickly on the spot, pumping your arms.

2. Using Props in Rhythm

Props are objects we can use while dancing to make it more fun, challenging, and beautiful. They help us focus and improve our coordination.

- **Ribbons or Scarves:** Hold a colorful ribbon or scarf. Wave it in big circles in the air, make snake-like waves, or draw figure-eights to the music.

- **Balls:** Use a small, soft ball. Bounce it on the ground on the strong beat of the music. Try: BOUNCE (on beat 1) - CATCH (on beat 2).
- **Hoops (Hula Hoops):** Spin the hoop around your waist rhythmically. You can also place it on the ground and jump in and out of it to the beat, or hold it and swing it like a steering wheel.

3. Freestyle Creative Movements

Freestyle means dancing without planned steps. You listen to the music and let your body move however it feels. There are no wrong moves! This helps you become more creative, confident, and learn what movements your body enjoys.

- **How to try it:** Close your eyes for a moment, listen to the music, and ask yourself: Does it make me want to wiggle? Stretch? Spin? Shake? Then just do it! You can slide across the floor, make funny shapes with your body, or even freeze like a statue when the music pauses.

4. Rhythmic Sequences and Performance

A sequence is a number of movements linked together without stopping, like a short dance story.

- **Example Sequence (Count of 4 for each move):** a. March forward 4 steps (1, 2, 3, 4). b. Do 4 Jumping Jacks (1, 2, 3, 4). c. Clap your hands 4 times (1, 2, 3, 4). d. Take a final bow (Hold for 4 counts).
- **Performance Skills:** When you perform, remember to:
 - **Smile and have fun!** Your face shows you are enjoying it.
 - **Look at your audience sometimes,** not just at your feet.
 - **Keep going!** If you make a mistake, just continue with the next move. Everyone makes mistakes, and the show must go on!

EVALUATION

1. What is the main health benefit of doing aerobic dance?
2. Name two props that can be used in dance and show how you would use one.
3. In your own words, what does "freestyle" dancing mean?
4. Perform 5 jumping jacks at a steady, rhythmic pace.
5. What is the best thing to do if you forget a step during a performance?

ASSIGNMENT

1. **(Practical):** Find a scarf, towel, or long piece of cloth at home. Play any music and practice waving it to the beat for 1 minute.
2. **(Practical/Written):** Create your own short sequence: Do 3 jumps on the spot, then 1 turn. Practice it until it is smooth. Write down the steps.
3. **(Written):** List three different exercises that can be part of an aerobic dance (e.g., high knee lifts).

WEEK 4: BALL GAMES I - INTRODUCTION

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. List four types of ball games.
2. Differentiate between the balls used for football, basketball, and tennis.
3. State one basic rule for Football and one for Basketball.
4. Identify appropriate equipment needed for ball games.

CONTENT

1. Types of Ball Games

Ball games are sports or physical activities where a ball is the main object used. They are excellent for exercise, learning teamwork, and having fun.

- **Football (Soccer):** Played mainly by kicking the ball with the feet to score goals.
- **Basketball:** Played by throwing (shooting) a ball into a high, horizontal hoop (basket) using the hands.
- **Volleyball:** Played by hitting a ball back and forth over a high net with the hands, without letting it touch the ground on your side.
- **Handball:** Played by throwing a ball with the hands into a goal, similar to football but using hands.
- **Table Tennis:** Played on a table where players use small paddles (bats) to hit a very small, light ball back and forth.

2. Equipment Needed

Each game needs its own specific tools and playing gear.

Game	The Ball	Other Important Equipment	What Players Wear
Football	Medium-sized, round, leather	Goal posts with a net,	Jersey, shorts, socks,

Game	The Ball	Other Important Equipment	What Players Wear
	(or synthetic) ball. Usually black and white pentagons.	sometimes boots with studs (cleats).	shin guards, boots.
Basketball	Large, heavy, bouncy orange ball with lines.	A basket (hoop) with a net, mounted high on a backboard.	Jersey, shorts, socks, basketball shoes.
Tennis	Small, fuzzy (felt-covered) ball, usually yellow.	A tennis racket (a bat with strings) and a net.	Comfortable shirt, shorts/skirt, tennis shoes.
General			Jersey/Kit: A uniform with a number to identify teammates.

3. Basic Rules of the Games

Every game has simple, important rules to make it fair and safe.

- **Football Rule:** Players (except one special player) must not touch the ball with their hands or arms. The special player is the Goalkeeper who can use hands inside a marked area.
- **Basketball Rule:** When a player is moving with the ball, they must bounce (dribble) it on the floor. They cannot run holding the ball without dribbling.
- **Volleyball Rule:** The ball must not touch the ground on your side of the court. Your team can touch it up to three times before sending it over the net.

4. Choosing Appropriate Games

We choose which ball game to play based on:

- **Space Available:** Football needs a big, open field. Table Tennis needs a small room with a table.
- **Number of Players:** Basketball is often 5 players per team. You can play football with many or just a few friends.
- **Safety:** We must ensure the area is safe (no stones, glass) and we use the right ball for our age (not too heavy).

EVALUATION

1. Name three ball games that are played using your hands.
2. In which game do players try to shoot a ball into a high basket?
3. What is the most important rule for all players except the goalkeeper in football?
4. Look at these balls: a big orange one and a small fuzzy yellow one. Which is for tennis?
5. Mention one piece of protective equipment worn in football.

ASSIGNMENT

1. **(Drawing):** Draw a Football and a Basketball side by side in your notebook. Color them correctly.
2. **(Written):** Write down one main difference between Football and Handball. (Hint: Think about which body part is mainly used).

3. **(Oral/Written):** Ask a friend or family member: Can you name two famous football or basketball players? Write down the names they tell you.

WEEK 5: MIDTERM EXAMINATION

CONTENT

This week, pupils will be assessed on their understanding of all topics covered from Week 1 to Week 4. The examination will include questions and practical tasks based on:

- Creative Rhythmic Activities (Definition, Elements, Movements).
- Traditional Nigerian Dances and Cultural Rhythms.
- Using Props and Creating Sequences.
- Introduction to different Ball Games, their equipment, and basic rules.

WEEK 6: MIDTERM BREAK

CONTENT

This is a period for rest and relaxation. Pupils are encouraged to engage in safe play, get adequate sleep, and eat healthy meals to refresh their minds and bodies for the next half of the term.

WEEK 7: BALL GAMES II - FOOTBALL BASICS

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. Describe the shape and key parts of a football field.
2. Identify three positions in a football team and their roles.
3. Demonstrate the basic skills of dribbling and passing.
4. Explain "Ball Control" simply.

CONTENT

1. The Football Field (Pitch)

A football field is like a giant green rectangle where the game happens.

- **Shape:** It is always a rectangle.
- **Surface:** It is covered with natural grass or artificial turf (fake grass that is soft to play on).
- **Key Markings (Lines on the field):**
 - **Center Circle:** A circle in the middle of the field where the game starts.
 - **Penalty Box:** A large rectangle in front of each goal. If a foul happens here, the attacking team gets a very close shot (penalty kick).
 - **Goal Line:** The line at each short end of the rectangle. The goal sits on this line.
- **Goal Posts:** There is a goal at each end. It is made of two tall posts with a crossbar on top and a net attached to catch the ball.

2. Positions in Football

A full football team has 11 players, each with a special job, like different players in a marching band.

- **Goalkeeper (1 player):** Stands in the goal. Their main job is to stop the ball from going into the net. They are the only player allowed to use their hands and arms, but only inside their own penalty box.

- **Defenders (e.g., 4 players):** They play closest to their own goalkeeper. Their job is to protect their goal, take the ball away from the other team's attackers, and clear the ball to safety.
- **Midfielders (e.g., 4 players):** They play in the middle of the field. They are the link between defenders and attackers. They help in both defense and attack—they stop the other team and also create chances to score.
- **Strikers/Forwards (e.g., 2 players):** They play closest to the opponent's goal. Their main job is to score goals. They try to receive passes from teammates and shoot the ball into the net.

3. Basic Skills: Dribbling and Passing

- **Dribbling:** This is how you move with the ball at your feet. It is not just kicking it far ahead and running. You take small, gentle taps or pushes with different parts of your foot to keep the ball very close to you as you run. This makes it hard for an opponent to steal it. Imagine guiding a pet with light touches so it stays near you.

- **Practice:** Walk in a straight line, using the inside and outside of your foot to tap the ball every step.
- **Passing:** This is kicking the ball to a teammate. For short, accurate passes, we use the inside of the foot. This part is flat and wide, like a paddle, so it gives you good control. Point your other foot where you want the ball to go, and swing your passing foot through the ball.

4. Ball Control and Drills

- **Ball Control (Trapping):** This is the skill of softly stopping a ball that is coming to you—whether it's rolling on the ground, bouncing, or in the air—so it lands nicely at your feet, ready for your next move. You can use the sole of your foot, the inside of your foot, your chest, or your thigh to cushion the ball.
- **Simple Passing Drill:** Pupils pair up, standing about 5 big steps apart. Using the inside of the foot, they pass the ball back and forth, trying to make it easy for their partner to receive it.

EVALUATION

1. What is the shape of a standard football field?
2. Which player on the football team is allowed to use their hands during play?
3. What is the main job of a striker or forward?
4. When dribbling, should you kick the ball far away or keep it close to your feet?
5. Which part of your foot is best for making an accurate short pass to your friend?

ASSIGNMENT

1. **(Drawing):** Draw the outline of a football field. Label the center circle and one goal post.
2. **(Written):** List the four main groups of positions in a football team (Goalkeeper, Defenders, Midfielders, Forwards) and write one job for each group.
3. **(Practical):** At home, use any round object (e.g., a small gourd, a rolled-up socks ball) and practice stopping it gently with the sole of your foot as it rolls towards you.

WEEK 8: BALL GAMES III - BASKETBALL BASICS

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. Describe the main features of a basketball court.
2. Demonstrate the correct way to dribble a basketball.
3. Perform a chest pass and a bounce pass.
4. Explain the "Defensive Stance."

CONTENT

1. Basketball Court Layout

A basketball court is a hard, flat rectangle, usually made of wood (indoors) or concrete (outdoors).

- **Key Features:**
 - **Center Circle:** A circle in the middle where the game starts with a "jump ball."
 - **The Hoop (Basket):** A metal ring with a net hanging from it, attached to a backboard (a flat rectangle). It is mounted high on a pole.
 - **Three-Point Line:** A large semi-circle painted on the floor. Shots made from behind this line score extra points.
 - **Free-Throw Line:** A line where players stand to take penalty shots.

2. Dribbling Techniques

Dribbling is how you move while holding the ball—you must bounce it on the floor.

- **Correct Way:** a. Use your **fingertips** to push the ball down, not your palm. Your hand should look like it's covering the top of the ball. b. Keep the ball **below your waist height** so it's harder for a defender to steal. c. **Look forward**, not down at the ball. This helps you see your teammates and the basket. d. Use your body to protect the ball from the defender.

- **Rule:** You cannot stop dribbling, hold the ball, and then start dribbling again. This is called a "double dribble" and is not allowed.

3. Passing: Chest and Bounce Pass

Passing is the fastest way to move the ball to a teammate.

- **Chest Pass:** Hold the ball with both hands at your chest. Step towards your target and push the ball straight from your chest to your teammate's chest. It's direct and fast for short distances.
- **Bounce Pass:** Hold the ball similarly, but aim to push it down towards the floor so it bounces once, about two-thirds of the way to your teammate, and comes up to their waist. This is useful when a defender has their hands up.

4. Shooting and Defense

- **Shooting:** Throwing the ball to score into the basket. Beginners start with a simple two-handed shot aimed at the square on the backboard.
- **Defensive Stance:** This is how you stand to guard an opponent and stop them from scoring. a. Stand with your feet wider than your shoulders. b. Bend your knees as if you are sitting in a low chair. c. Keep your back straight. d. Hold your arms out wide to the

sides to make it harder for them to pass or shoot. e. Watch the opponent's waist, not their eyes or feet, as the waist shows where they will really go.

EVALUATION

1. What do you throw the ball through to score points in basketball?
2. Show me how to stand and bounce the ball using only your fingertips. (Practical demonstration).
3. When would you use a bounce pass instead of a chest pass?
4. Where should you look when you are dribbling the ball down the court?
5. Describe how to stand in a good defensive stance.

ASSIGNMENT

1. **(Drawing):** Draw a basketball hoop with the backboard and net.
2. **(Written):** Write down one important rule about dribbling in basketball.
3. **(Practical):** Find any ball at home. Practice dribbling: bounce it 20 times with your right hand, then 20 times with your left hand, trying to keep it below your waist.

WEEK 9: NUTRITION I

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. Define Nutrition.
2. List the six classes of food.
3. Identify two sources for each class of food.
4. State one function of each class of food in the body.

CONTENT

1. Meaning of Nutrition

Nutrition is about the food we eat and how our body uses it. Think of your body as a car. Food is the fuel (like petrol) that makes the car run. Good nutrition gives us the fuel we need to grow, to have energy to play and learn, and to repair ourselves if we get a cut or bruise.

2. The Six Classes of Food

To be strong and healthy, our bodies need a mix of six different types of nutrients, which we call the six classes of food.

Class of Food	Main Job (Function)	Common Nigerian Sources
1. Carbohydrates	Energy Givers. They give us quick and lasting energy for everything we do.	Yam, Rice, Garri/Eba, Bread, Maize, Potato.
2. Proteins	Body Builders. They help us grow taller and stronger. They repair muscles and make new cells (like for healing).	Beans, Fish (like Titus), Meat, Eggs, Milk, Chicken.
3. Fats & Oils	Energy Storage & Warmth. They give a lot of stored energy and help keep our bodies warm. They also protect our organs.	Palm Oil, Groundnut Oil, Butter, Avocado (Pear), Nuts.
4. Vitamins	Body Protectors (Fighters). They help our bodies fight sickness and keep our eyes,	Oranges (Vitamin C), Carrots (Vitamin A), Green Vegetables

Class of Food	Main Job (Function)	Common Nigerian Sources
	skin, and gums healthy.	(e.g., Ugwu, Spinach), Pawpaw.
5. Minerals	Body Strengtheners. They make our bones and teeth hard and strong. They help our blood carry oxygen.	Milk (Calcium), Salt (Iodine), Leafy Greens (Iron), Fish bone (Calcium).
6. Water	Body Regulator. It is not a 'food' but a vital nutrient. It helps digest food, cools our body through sweat, and carries nutrients everywhere.	Clean drinking water, Fruits like Watermelon, Orange.

MY HEALTHY FOOD PLATE

3. Simple Functions Summary

- **Want energy to run and study?** Eat Carbohydrates and Fats.
- **Want to grow tall and strong?** Eat Proteins.
- **Want to stay healthy and not get sick often?** Eat foods rich in Vitamins and Minerals.
- **Want your body's systems to work smoothly?** Drink plenty of Water.

EVALUATION

1. What does the word "nutrition" mean? (Hint: Think of fuel for a car).
2. Which class of food is the main source of quick energy for playing football?
3. Name two common foods in Nigeria that are good sources of protein.
4. Why is it important to eat fruits like oranges that contain vitamins?
5. True or False: Water helps to cool down our body when we are hot.

ASSIGNMENT

1. **(Drawing):** Draw a plate of food. Show one item for Energy (e.g., rice), one for Body Building (e.g., beans), and one for Protection (e.g., a vegetable leaf).
2. **(Written):** Think about what you ate yesterday. List three items and write which class of food each one belongs to (e.g., "Bread - Carbohydrate").
3. **(Oral/Written):** Ask an adult: "Why is drinking milk important for children?" Write down the reason they give.

WEEK 10: NUTRITION II

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. Define a Balanced Diet.
2. Differentiate between undernutrition and overnutrition (Malnutrition).
3. List three nutritional deficiency diseases.
4. Explain the importance of eating breakfast.

CONTENT

1. Balanced Diet

A balanced diet is not eating only your favorite food. It is eating a variety of foods from the six classes in the right amounts every day. It's like a team where every player has a role; if one player is missing, the team is weak.

- **Example of a Balanced Nigerian Meal:** Jollof Rice (Carbohydrate) + Chicken (Protein) + Fried Plantain (Carbohydrate & some Fat) + Mixed Vegetable Salad (Vitamins & Minerals) + a cup of Water.

2. Malnutrition: Two Bad Extremes

Malnutrition means "bad nutrition." It happens when we don't eat the right kinds or amounts of food. There are two main types:

- **Undernutrition:** This means not getting enough food or enough of the right nutrients. The body doesn't get the fuel and materials it needs to grow and function. A person may become very thin, weak, and tired all the time.
- **Overnutrition:** This means eating too much food, especially the wrong kinds (like too much sugar, oil, and fatty foods). The body stores the extra as fat. A person may become overweight or obese, which makes the heart and joints work too hard.

3. Nutritional Deficiency Diseases

These are specific sicknesses caused by a lack of a particular nutrient in our diet over a long time.

- **Kwashiorkor:** Caused by lack of Protein. Signs: Swollen stomach and feet, very thin arms and legs, dry and flaky skin. Common in young children who eat mostly starchy foods without enough beans, fish, or meat.
- **Rickets:** Caused by lack of Vitamin D and Calcium (a mineral). Signs: Bones become soft and bend, leading to bow legs. Needed for strong bones.
- **Scurvy:** Caused by lack of Vitamin C. Signs: Bleeding gums, wounds that don't heal well, feeling very weak. Sailors long ago got this because they had no fresh fruits on long voyages.

4. Healthy Eating Habits

- **Eat Breakfast:** Breakfast is the most important meal. After sleeping all night, your body's fuel tank is empty. Breakfast "breaks the fast" and gives you energy to concentrate in school. Eating breakfast helps you think better and play better.
- **Drink Water:** Choose clean water over sugary drinks like soda. Sugar gives empty energy and can make you gain too much weight.

- **Wash Hands:** Always wash your hands with soap and running water before you eat to remove germs.
- **Eat Slowly:** Chew your food properly. This helps your stomach digest it easily and tells your brain when you are full.

EVALUATION

1. What do we call a meal that contains the right amounts from different classes of food?
2. Which deficiency disease is linked to a child who eats mostly garri/pap without beans or fish?
3. What can happen if you drink too many sugary soft drinks and eat too many sweets?
4. Give one reason why eating breakfast before school is very important.
5. Mention one good habit to have before you start eating your food.

ASSIGNMENT

1. **(Written):** Plan a balanced menu for one day: Write one food item for Breakfast, Lunch, and Dinner that would make a healthy mix.
2. **(Written):** Write down two problems that can happen to someone who eats too much candy and soda regularly.
3. **(Drawing/Awareness):** Draw a simple poster to teach others about Kwashiorkor. Draw a happy, healthy child eating a plate of beans/fish. Write a short message like: "For Strong Children, Eat Proteins!"

WEEK 11: REVISION

CONTENT

- **Review of Rhythmic Activities** (Beat, Tempo, Patterns, Traditional Dances).
- **Review of Ball Games** (Football field, positions, basic skills; Basketball court, dribbling, passing).
- **Review of Nutrition** (The six classes of food with examples, Balanced Diet, Deficiency diseases like Kwashiorkor).
- **Practical demonstration:** Pupils will perform a simple dance sequence and demonstrate a football pass or basketball dribble.
- **Question and Answer session:** The teacher will clarify any confusing points and prepare pupils for the end-of-term examination.

PRIMARY 6 PHYSICAL AND HEALTH EDUCATION SCHEME OF WORK

SECOND TERM

Week	Topic	Content
1	Personal and Environmental Health II	Environmental health - clean surroundings, waste disposal, drainage systems, toilet facilities; Water sanitation; Food hygiene; Air quality; Noise pollution; Community health practices; Disease vectors control - mosquitoes, flies, rats
2	Personal and Environmental Health III	Common communicable diseases - malaria, typhoid, cholera, tuberculosis, COVID-19; Prevention strategies; Immunization importance; Non-communicable diseases - diabetes, hypertension, cancer; Lifestyle and health; Health screening and check-ups
3	Athletics II - Field Events: Jumping I	High jump - techniques (scissors, straddle, Fosbury flop), approach run, take-off, bar clearance, landing; Equipment and safety; Measuring and recording heights; Rules and regulations; Progressive training
4	Athletics II - Field Events: Jumping II	Long jump - approach run, take-off board, flight techniques (hang, hitch-kick), landing in sand pit; Measuring distances; Triple jump introduction - hop, step, jump phases; Pole vault basics; Safety considerations
5	MIDTERM EXAMINATION	Assessment of topics covered in weeks 1-4
6	MIDTERM BREAK	Rest and relaxation period
7	Athletics II - Field Events: Throwing I	Shot put - grip, stance (glide technique, spin technique), putting action, release, follow-through; Weight of shot for different ages; Safety circle and rules; Building strength for throwing; Practice drills
8	Athletics II - Field Events:	Discus throw - grip, wind-up, spin, release, follow-

	Throwing II	through; Javelin throw - grip, approach run, throwing action, release angle; Hammer throw basics; Safety procedures; Sector lines; Measuring throws; Competition rules
9	Ball Games I - Football and Basketball	Football - advanced skills (dribbling variations, long passes, shooting techniques, heading); Positions and formations; Game strategies; Set pieces - corners, free kicks; Basketball - advanced dribbling, shooting (lay-up, jump shot), defensive techniques; Plays and strategies
10	Ball Games II - Volleyball and Handball	Volleyball - serving techniques (underhand, overhand, jump serve), setting, spiking, blocking, digging; Court positions and rotation; Game tactics; Handball - advanced techniques, fast breaks, shooting variations, goalkeeper skills; Team formations; Match play strategies
11	REVISION	Review of all topics covered; Athletics field events practice; Ball games tournaments; Question and answer sessions
12	EXAMINATION	End of term assessment - theory and practical
13	CLOSING	Report card distribution; Vacation assignment

PRIMARY 5 PHYSICAL AND HEALTH EDUCATION LESSON NOTES

SECOND TERM

WEEK 1: MEASURING PHYSICAL FITNESS - ENDURANCE I

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. Define physical fitness in simple terms.
2. List three components of physical fitness.
3. Explain the meaning of cardiovascular endurance.
4. Identify activities that build endurance.

CONTENT

1. Meaning of Physical Fitness

Physical fitness means your body is strong, healthy, and able to do everyday activities without getting tired too quickly. A physically fit person can run to school, play during break time, help carry items at home, and still have energy left over. It's like having a fully charged battery that lasts all day.

2. Components of Physical Fitness

Being truly fit isn't just about being strong. It's about having a mix of different abilities. Think of it as a toolbox; you need different tools for different jobs.

- **Endurance (Stamina):** The ability to keep doing an activity for a long time without stopping because you are tired. Example: Running around the field many times.
- **Strength (Power):** The ability of your muscles to use force to lift, push, or pull something heavy. Example: Lifting a full bucket of water or pushing a heavy box.
- **Flexibility (Stretchiness):** The ability of your joints and muscles to bend, stretch, and twist easily without getting hurt. Example: Touching your toes without bending your knees.

- **Speed (Quickness):** The ability to move your whole body or a part of it very fast.
Example: Sprinting to catch a bus or quickly dodging someone in a game.
- **Agility (Nimbleness):** The ability to change direction or body position quickly and smoothly while under control. Example: Playing tag or dodging opponents in football.

3. Cardiovascular Endurance

This is a special type of endurance. "Cardio" refers to your heart, and "vascular" refers to your blood vessels.

- **Simple Meaning:** It is how well your heart and lungs work together to supply your muscles with oxygen during exercise. Oxygen is the "fuel" your muscles need to keep working.
- **If you have good cardiovascular endurance:** Your heart is a strong pump. You can run, swim, or dance for a long period without getting out of breath (panting) very quickly. Your heart beats strong and steady.

4. Activities for Building Endurance

These are exercises that make your heart beat faster for a continuous period, strengthening it like a muscle.

- Running/Jogging: Moving at a steady pace for more than a few minutes.
- Swimming: Moving through water uses many muscles and makes your heart and lungs work hard.
- Cycling: Riding a bicycle for distance, not just a short trip.
- Skipping: Jumping rope continuously.
- Dancing: Moving energetically to music for several songs in a row.
- Football/Basketball: Playing these games involves a lot of running over time.

EVALUATION

1. If you can help with house chores and still have energy to play, what does that show about you?
2. Mention three different "tools" in your physical fitness toolbox.
3. What two body parts does "cardiovascular" endurance mainly train?
4. Why is endurance important for a footballer?
5. Which of these activities is BEST for building endurance: lifting a heavy chair once, or skipping rope for 5 minutes?

ASSIGNMENT

1. **(Practical/Written):** Find a safe space at home. Jog or march on the spot for 3 minutes without stopping. Afterwards, write one sentence about how you felt (e.g., "My heart was beating fast," or "I was breathing heavily").
2. **(Drawing):** Draw a picture of yourself or someone else doing an activity that builds endurance (like skipping rope or riding a bicycle).
3. **(Written):** List three sports or games that require players to have a lot of endurance (e.g., long-distance running).

WEEK 2: MEASURING PHYSICAL FITNESS - ENDURANCE II

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. Describe how to perform the 12-minute run/walk test.
2. Demonstrate how to measure heart rate and pulse.
3. Explain the meaning of "Recovery Time."
4. State the benefits of good endurance.

CONTENT

1. Testing Endurance

How can we know if our endurance is improving? We can do simple tests.

- **The 12-Minute Run/Walk Test (Cooper Test):** This test measures how much distance you can cover in 12 minutes. You can mix running and walking, but you must keep moving for the entire time. The farther you go, the better your cardiovascular endurance.
 - **How it's done:** On a safe, measured track or field, you start when the teacher says "Go!" and try to run or walk as far as you can until 12 minutes is up. Someone marks how many laps you completed.
- **The Step Test:** You step up onto a low bench or sturdy box and then down again, repeatedly for 3 minutes at a steady pace. Right after stopping, we check how fast your heart is beating. A heart that recovers quickly is a fit heart.

2. Measuring Heart Rate and Pulse

Your pulse is the thump you feel when your heart pumps blood. Each thump is one heartbeat.

We measure our heart rate by counting the pulse.

- **Where to find your pulse:**
 - a. **On your wrist (Radial Pulse):** Place the tips of your index and middle fingers on the inside of your other wrist, below the base of your thumb. Press gently until you feel the thumping.

b. **On your neck (Carotid Pulse):** Place the same two fingers gently on the side of your neck, next to your windpipe.

- **How to measure your Resting Heart Rate:** a. Sit down quietly for 5 minutes. b. Find your pulse on your wrist. c. Look at a clock with a second hand. Count how many beats you feel in 60 seconds (1 minute). This number is your resting heart rate per minute.

3. Recovery Time

This is how long it takes for your heart rate and breathing to go back to normal after you finish exercising.

- A person with good fitness will have a **shorter recovery time**. Their breathing becomes steady again quickly.
- A person who needs to improve fitness will have a **longer recovery time**. They will be panting and out of breath for several minutes after stopping.
- **Example:** After running, if Chinedu stops panting after 1 minute but Bayo is still panting after 3 minutes, Chinedu has better endurance and a shorter recovery time.

4. Benefits of Good Endurance

Having a strong heart and good endurance helps you in many ways:

- You don't get tired easily during daily activities or sports.
- Your heart muscle becomes stronger and more efficient.
- You have better concentration in class because your brain gets plenty of oxygen-rich blood.
- It helps you maintain a healthy body weight.
- You sleep more soundly at night.

EVALUATION

1. What does the 12-minute run/walk test tell us about a person?
2. Show me where you can feel your pulse on your own body. (Practical).
3. To find your resting heart rate, how long should you count your pulse?
4. What is "recovery time"?
5. Name one benefit of having good endurance that helps you in school.

ASSIGNMENT

1. **(Practical/Written):** Sit quietly. Find your pulse on your wrist and count the beats for 1 minute. Write down the number. This is your resting heart rate.
2. **(Practical/Written):** Do 20 jumping jacks. Immediately after, find your pulse and count for 1 minute. Write this number down. Is it higher or lower than your resting heart rate? Why?
3. **(Written):** In your own words, explain why a farmer who works on the farm all day might have a very strong heart.

WEEK 3: MEASURING PHYSICAL FITNESS - STRENGTH

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. Define muscular strength.
2. List three exercises used for strength training.
3. Demonstrate the correct way to do a push-up or sit-up.
4. Explain safety rules when building strength.

CONTENT

1. Meaning of Muscular Strength

Muscular strength is the maximum amount of force a muscle or group of muscles can produce at one time. It's about power.

- It's what you use for short, hard efforts. Think of it as the ability to do one very difficult thing.
- **Examples from daily life:** Lifting a heavy backpack full of books, pushing a car that is stuck (with others helping), moving a heavy pot, or climbing a rope.

2. Strength Training Exercises

These exercises make your muscles thicker and stronger. They are often done in repetitions (reps) and sets.

- **Push-ups:** Strengthen the muscles in your chest, shoulders, and arms (triceps).
 - **Correct Form:** Start lying face down. Place hands flat on the ground slightly wider than your shoulders. Keep your body straight like a plank from head to heels. Lower your body until your chest nearly touches the floor, then push back up.

- **Sit-ups/Crunches:** Strengthen your stomach (abdominal) muscles.
 - **Correct Form:** Lie on your back with knees bent and feet flat. Cross your arms on your chest or place hands behind your ears (do not pull on your neck). Curl your upper body towards your knees, then lower back down.
- **Squats:** Strengthen your thighs, hips, and buttocks.
 - **Correct Form:** Stand with feet shoulder-width apart. Bend your knees and lower your body as if you are about to sit in a chair. Keep your back straight and your knees behind your toes. Stand back up.
- **Lifting Weights:** Using safe, light objects like water bottles or textbooks to do bicep curls.

3. Testing Strength

We can test strength by seeing how many times you can do an exercise correctly or how much weight you can lift once.

- **Example Test:** How many push-ups can you do in 30 seconds? A higher number shows greater upper body strength.

4. Building Strength Safely

It is very important to build strength safely to avoid injury.

- **Warm-up First:** Always do 5 minutes of light activity (like jogging or arm circles) to get blood flowing to your muscles.
- **Focus on Form:** Doing an exercise correctly is more important than doing it quickly or doing many with bad form. Bad form can hurt your back, neck, or joints.
- **Start Light:** Begin with a small number of repetitions or a light weight. Gradually increase as you get stronger.
- **Rest:** Muscles need time (about a day) to repair and grow stronger after a strength workout. Don't work the same muscles hard every single day.

EVALUATION

1. What is the difference between endurance (stamina) and strength (power)? Give an example of each.
2. Which exercise is best for making your leg muscles stronger: push-ups or squats?
3. When doing a push-up, why is it important to keep your body straight like a plank?
4. Why should you never skip your warm-up before doing strength exercises?
5. If two people try to lift a heavy log and one person succeeds, what does that tell us about their muscular strength?

ASSIGNMENT

1. **(Practical):** At home, practice doing 5 squats with correct form. Remember: back straight, knees behind toes.
2. **(Written):** List three chores or activities you do at home that require muscular strength (e.g., carrying a bucket of water, lifting a younger sibling, pushing furniture to sweep).
3. **(Drawing):** Draw a "stick figure" or simple drawing of a person in the middle of doing a push-up. Label the main muscles being used (arms and chest).

WEEK 4: MEASURING PHYSICAL FITNESS - SPEED

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. Define speed.
2. Identify factors that affect speed.
3. Describe the 50m dash speed test.
4. Demonstrate the correct starting position for a sprint.

CONTENT

1. Meaning of Speed

Speed is how fast you can move your entire body from one point to another. It's about covering a distance in the shortest possible time.

- In sports, speed is crucial for sprinting in athletics, chasing a ball in football, or making a fast break in basketball.
- It's different from endurance: Speed is very fast for a short time; endurance is steady for a long time.

2. Factors Affecting Speed

Several things influence how fast you can run:

- **Reaction Time:** This is the time between hearing a signal (like "Go!" or a whistle) and when you actually start moving. A faster reaction time gives you a better start.
- **Running Technique:** Good form makes you more efficient and faster.
 - **Arm Action:** Pump your arms forward and back (not across your body) to help drive you forward.
 - **Leg Action:** Run on the balls of your feet (toes), not flat-footed. Take long, powerful strides.
 - **Posture:** Lean slightly forward and look ahead, not at your feet.

- **Muscular Strength:** Strong leg muscles (in your thighs and calves) allow you to push off the ground with more power.
- **Body Composition:** Carrying extra body weight can slow you down, as you have more mass to move.

3. Sprint Techniques: The Start

A good start can win a short race.

- **"On Your Marks":** Crouch down. Place your strongest foot just behind the starting line. Place your other foot further back. Place your hands on the ground just behind the line, fingers spread.
- **"Set":** Lift your hips slightly higher than your shoulders. Keep your head down, looking at the ground just ahead. Your body is like a coiled spring, ready to explode forward.
- **"Go!" (or the sound of the whistle):** Explode out of the position! Drive your back leg forward and push hard off your front foot. Begin pumping your arms.

On Your Marks

Set

Go!

4. Speed Tests

- **50m Dash:** This is a standard test for pure speed. You run 50 meters in a straight line as fast as you can. Your time is recorded with a stopwatch. The lower the time, the faster you are.
- **Shuttle Run:** This tests speed and agility. You run back and forth between two lines 10-20 meters apart, touching the ground at each line. This requires quick starts, stops, and turns.

EVALUATION

1. If you and your friend run from the tree to the gate, and you get there first, who had more speed?
2. Name two things you can do with your body (technique) to help you run faster.
3. What is "reaction time" in a race?
4. When sprinting, should you land on your heels or the balls of your feet?
5. Describe what a person looks like in the "Set" position for a sprint start.

ASSIGNMENT

1. **(Practical):** Practice the sprint start commands ("On your marks, Get set, Go!") at home 5 times. Focus on exploding forward on "Go!"
2. **(Practical/Written):** Mark a short distance at home (e.g., from your front door to a tree). Run it as fast as you can. Ask someone to count "one-Mississippi, two-Mississippi..." to estimate your time. Write down the distance and your approximate time.
3. **(Written):** List two sports where having great speed is a very big advantage for the players.

WEEK 5 & 6: MIDTERM EXAMINATION AND BREAK

WEEK 7: FIELD EVENTS I - JUMPING EVENTS

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. List the different types of jumping events.
2. Describe the techniques for High Jump and Long Jump.
3. State the safety rules in jumping events.
4. Explain the phases of the Long Jump (Approach, Take-off, Flight, Landing).

CONTENT

1. Types of Jumping Events

Field events are about jumping for height or distance or throwing for distance. They are different from track events (running).

- **High Jump:** The goal is to jump over a horizontal bar without knocking it off. The winner is the one who clears the greatest height.
- **Long Jump:** The goal is to jump as far forward as possible from a take-off board into a sandpit. The winner has the longest jump.
- **Triple Jump:** This is like a long jump with three parts: a Hop, a Step, and a Jump into the sandpit. It requires rhythm and coordination.

2. High Jump Techniques

- **Scissors Style (Basic Technique):** The jumper runs straight at the bar from the front. They take off from one foot and lift their lead leg (like a scissor kick) over the bar, followed quickly by the trailing leg. They land on their feet.
- **Fosbury Flop (Advanced):** Most professional athletes use this. They curve their run-up, take off from their outside foot, and go over the bar backwards, head and shoulders first, arching their back. They land on a soft mat on their shoulders and back.

Scissors

Fosbury Flop

3. Long Jump Phases

A good long jump has four connected parts:

1. **Approach Run (Run-up):** Building up maximum controlled speed on the runway. This speed is converted into distance in the air.
2. **Take-off:** The jumper hits the take-off board with one strong foot. They drive their knee up and swing their arms forward and upward to launch into the air.
3. **Flight:** The jumper is in the air. They use techniques like the "hang" (body stretched out) or "hitch-kick" (running in the air) to maintain balance and prepare for landing.
4. **Landing:** The jumper brings their feet forward and lands with both feet together in the sandpit. They then fall forward or to the side to avoid touching the ground behind their landing spot.

4. Safety in Jumping

- The landing area must be soft and deep. For high jump, use a thick foam mat. For long/triple jump, use fine, soft sand that is regularly raked.
- Always check that the landing area is clear before jumping.
- Perform a proper warm-up to prepare leg muscles and joints.
- Wait for your turn and listen to the teacher's instructions.

EVALUATION

1. What is the main difference between a High Jump and a Long Jump?
2. In the Long Jump, what is the purpose of the run-up before the jump?
3. Put these Long Jump phases in order: Landing, Take-off, Flight, Approach Run.
4. Why is it dangerous to jump into a sandpit that has stones or hard objects in it?
5. If a high jumper touches the bar and it falls, does the jump count?

ASSIGNMENT

1. **(Drawing):** Draw a Long Jump area. Label the runway, the take-off board, and the sandpit.

2. **(Written):** Write down the three parts (phases) of the Triple Jump in the correct order.
3. **(Written/Practical):** Write one important safety rule for jumping events. At home, practice a safe two-foot landing from a small step or low height, bending your knees as you land.

WEEK 8: FIELD EVENTS II - THROWING EVENTS

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. Identify implements used in Shot Put, Discus, and Javelin.
2. Describe the technique for Shot Put.
3. State the safety rules for throwing events.
4. Explain how throws are measured.

CONTENT

1. Shot Put

- **Implement:** The implement is a heavy metal ball. For men, it's like a small cannonball. For women and younger athletes, it is smaller and lighter. We call it a "shot."
- **Technique - The "Put":** It is called a "put" because the ball is pushed from the shoulder, not thrown like a stone.
 - a. **Hold:** Rest the shot in the base of your fingers, not your palm. Place it against your neck, just below your jaw. Your elbow should point out to the side.
 - b. **Stance:** Stand at the back of a small, marked circle, facing away from the throwing direction.
 - c. **Movement:** Using the power from your legs and back, drive (push) the shot forward and upward into the air in one explosive motion. You finish the push with a strong flick of your wrist and fingers.

2. Discus Throw

- **Implement:** The discus is a heavy disc, shaped like a plate or a thick frisbee. It is made of wood with a metal rim.
- **Technique:** The thrower stands in a circle. They hold the discus flat in their hand, spin around one and a half times to build speed (like a spinning top), and then release it with a whip of the arm so it flies flat through the air. The spin gives it power.

3. Javelin Throw

- **Implement:** The javelin is a long, spear-like stick made of metal or fiberglass. It has a sharp metal point at the front.
- **Technique:** The thrower holds the javelin at its grip (like holding a big pencil). They run down a runway to gain speed, then in one continuous motion, pull the javelin back and throw it over their shoulder so it sails through the air and sticks into the ground tip-first.

4. Safety Rules (NON-NEGOTIABLE)

Throwing events are potentially dangerous because the implements are heavy and thrown far. Safety is the number one rule.

- **Rule 1: Never Throw Unsupervised.** Only throw when a teacher or coach is present and has given permission.
- **Rule 2: Clear Field.** Never throw if anyone is in the throwing area or could walk into the path of the implement.
- **Rule 3: Wait Your Turn.** Stand behind the thrower, never in front or to the side. Wait until everyone has thrown before anyone goes to collect the implements.
- **Rule 4: Retrieve Safely.** Only walk to get the implement after it has landed and stopped moving. Carry it back carefully, never throw it back to the circle.

5. Scoring

The distance is measured from the inside edge of the throwing circle (for shot put and discus) or the take-off line (for javelin) to the first point where the implement touches the ground. The tape measure is pulled straight through the center of the circle/line. The longest legal throw wins.

EVALUATION

1. What is the name of the heavy ball used in the shot put event?
2. Why do we say "put" the shot instead of "throw" it?
3. What shape is a discus?
4. How is a javelin different from a shot or discus? (Think about its shape and how it lands).
5. What is the most important thing to do before you throw a heavy implement like a discus?

ASSIGNMENT

1. **(Drawing):** Draw a picture of a javelin. Label the point, the shaft, and the grip.
2. **(Written):** List two key differences between the Shot Put and the Javelin throw (e.g., the implement, the throwing action).
3. **(Oral/Written):** Write down one safety rule for throwing events and explain it to a family member.

WEEK 9: DRUG EDUCATION I

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. Define a drug.
2. Differentiate between medicinal and harmful drugs.
3. Explain the difference between prescription and over-the-counter drugs.
4. List three commonly abused drugs.

CONTENT

1. Meaning of Drugs

A drug is any substance (other than food) that, when taken into the body, changes the way the body or mind works.

- **Simple Analogy:** Think of your body as a computer. A drug is like a new software or command that changes how the computer operates. Some software is helpful (antivirus), some is harmful (a virus).
- **Important:** Not all drugs are bad. Medicines are helpful drugs. Food and water are not drugs.

2. Types of Drugs

- **Medicinal Drugs (Medicines):** These are helpful substances used to prevent, cure, or relieve the symptoms of illness. They are made to help us get better.
 - **Examples:** Paracetamol (for headache/fever), Cough Syrup, Antibiotics (to fight bacterial infections), Vaccines.
- **Harmful/Hard Drugs (Illicit Drugs):** These are dangerous substances that damage the body and mind. They are often illegal. They are not made to heal but to give a false feeling (a "high") that is very addictive and destructive.
 - **Examples:** Cocaine, Heroin, Methamphetamine ("mkpurummiri").

3. Prescription vs. Over-the-Counter (OTC)

- **Prescription Drugs:** These are strong medicines that you can only get from a pharmacist with a written note (prescription) from a qualified doctor or nurse. They are for specific, serious illnesses and can be dangerous if taken wrongly.
 - **Example:** Strong antibiotics, medicine for malaria, insulin for diabetes.
- **Over-the-Counter (OTC) Drugs:** These are milder medicines you can buy directly from a pharmacy or shop without a doctor's note. They are for common, minor problems.
 - **Example:** Panadol, Vitamins, Antacids for stomach upset, simple cough drops.

4. Drug Abuse and Misuse

- **Drug Misuse:** Using a medicine in the wrong way. This is dangerous even with good drugs.
 - **Examples:** Taking more than the recommended dose, using someone else's prescribed medicine, taking medicine for a longer time than instructed.
- **Drug Abuse:** Using any drug (especially harmful drugs) for non-medical reasons, to change how you feel or to get "high."
- **Commonly Abused Substances in Our Environment:**
 - Alcohol (Beer, Gin, Local brews like "ogogoro"):** It is legal for adults but harmful to children. It damages the liver and brain.
 - Tobacco (Cigarettes, "Shisha"):** The smoke contains nicotine and tar,

which cause lung cancer, heart disease, and stain teeth. c. **Cannabis**

(Marijuana/Igbo/Weed): An illegal drug that affects the brain, causing memory loss and strange behavior.

EVALUATION

1. What is a drug? Can you name one helpful drug?
2. What is the main difference between a medicine like paracetamol and a hard drug like heroin?
3. If you have a headache, can you buy Panadol without a doctor's note? What kind of drug is it?
4. What do we call it when someone takes their brother's prescribed malaria medicine without being sick themselves?
5. Mention two substances that people commonly abuse, which are also sold in our markets.

ASSIGNMENT

1. **(Practical/Written):** With permission from a parent, look at the First Aid box or medicine cabinet at home. List three medicines you find and write what they are likely used for (e.g., "Paracetamol - for fever").
2. **(Written):** Write down one serious danger of smoking cigarettes.
3. **(Oral/Written):** Explain "drug misuse" in your own words to a younger sibling or friend.

WEEK 10: DRUG EDUCATION II

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. List the effects of drug abuse on the body.
2. State reasons why people abuse drugs.
3. Describe the social consequences of drug abuse.
4. Suggest ways to say NO to drugs.

CONTENT

1. Reasons People Abuse Drugs

People don't start using drugs because they are "bad." They often start for reasons that can be understood, but it is always a wrong choice.

- **Peer Pressure:** Friends or people you want to impress may say, "Come on, try it, everyone is doing it." They want you to join them to feel accepted.
- **Curiosity:** Wanting to know "what it feels like" after hearing about it.
- **Escape from Problems:** Trying to forget troubles at home, school, or with friends. Drugs offer a temporary, false escape but make problems worse.
- **Ignorance:** Not knowing or believing how dangerous and addictive drugs can be.

2. Effects of Drug Abuse

Drug abuse is like putting poison in the engine of a car. It destroys the body and mind from the inside.

- **Physical Effects (On the Body):**
 - **Lungs:** Smoking causes cancer, cough, and makes it hard to breathe.
 - **Liver:** Alcohol and some drugs poison the liver, which cleans our blood. A damaged liver can fail.
 - **Brain:** Drugs can kill brain cells, leading to memory loss, confusion, madness (psychosis), and inability to learn.

- **Heart:** Stimulants can cause heart attacks, even in young people.
- **Psychological Effects (On the Mind):**
 - Addiction (the brain feels it needs the drug to function).
 - Anxiety, paranoia (feeling everyone is against you), hallucinations (seeing or hearing things that aren't there).
- **Social Consequences (On Your Life):**
 - **School:** Poor grades, dropping out, expulsion.
 - **Family:** Lying, stealing money to buy drugs, causing pain and shame to parents and siblings.
 - **Community:** Getting into fights, engaging in crime (armed robbery, theft), ending up in prison.
 - **Future:** Ruining chances for a good job, a happy family, and a healthy life.

3. Saying NO to Drugs (Refusal Skills)

You have the power to say NO. It is your right to protect your health and future.

- **Be Direct and Confident:** "No, thanks. I don't do that."
- **Give a Reason:** "No, I want to stay healthy and play football."

- **Suggest an Alternative:** "No, let's go play video games/watch a movie instead."
- **Use Humor:** "That stuff? No way, I need my brain for school!"
- **Walk Away:** If they keep pressuring you, just leave the situation. True friends will respect your choice.
- **Report:** If someone is pressuring you or selling drugs in school, report it to a trusted teacher, parent, or guardian immediately.

4. Getting Help

If someone is already addicted, they need help, not hate.

- They should talk to a trusted adult.
- They can get professional help from doctors and counselors at rehabilitation centres.
- Support from family and friends is very important for recovery.

EVALUATION

1. What is "peer pressure"?
2. How does smoking damage a person's body?
3. How can drug abuse destroy a student's future?
4. What is one clear and confident thing you can say if a friend offers you a cigarette?
5. Who should you tell if someone is trying to sell drugs in your school vicinity?

ASSIGNMENT

1. **(Drawing/Creative):** Design a small poster with a bold message like "DRUGS SHRINK YOUR FUTURE" or "MY BRAIN IS TOO SMART FOR DRUGS." Use colors and symbols.
2. **(Written):** Write a short paragraph (3-4 sentences) describing what happens to a person's life when they become a drug addict (think about health, family, and school).
3. **(Written):** List two positive hobbies or activities (e.g., football, reading, dancing, drawing) that can keep you busy and happy, away from bad influences.

WEEK 11: REVISION

CONTENT

This week is for revising all key topics from the Second Term.

- **Review of Physical Fitness Components:**
 - **Endurance:** What it is, how to test it (12-minute run), measuring pulse, recovery time.
 - **Strength:** Meaning, exercises (push-ups, squats), safety rules.
 - **Speed:** Meaning, factors affecting it, sprint start technique.
- **Review of Field Events:**
 - **Jumping:** High Jump vs. Long Jump objectives, phases of Long Jump (Approach, Take-off, Flight, Landing).
 - **Throwing:** Identifying Shot Put, Discus, Javelin. Understanding the "put" action.
CRITICAL SAFETY RULES.
- **Review of Drug Education:**
 - **Definitions:** Drug, Medicine, Drug Misuse vs. Abuse.
 - **Types:** Prescription vs. OTC drugs.
 - Commonly abused substances (Alcohol, Tobacco, Cannabis).
 - **Effects** (Physical, Social) and Reasons for abuse.
 - **Refusal Skills:** How to say NO.
- **Practical Demonstration:** Teacher will lead pupils in a short fitness circuit demonstrating a strength exercise (e.g., squats), a speed/agility exercise (e.g., shuttle run), and a stretching exercise for flexibility.
- **Question and Answer Session:** The teacher will address any remaining questions from pupils and conduct oral quizzes to prepare them for the end-of-term examination.

PRIMARY 6 PHYSICAL AND HEALTH EDUCATION SCHEME OF WORK

THIRD TERM

Week	Topic	Content
1	Ball Games III - Table Tennis and Badminton	Table tennis - grip, stance, basic strokes (forehand, backhand), serves, spin techniques, footwork; Singles and doubles rules; Badminton - grip, stance, strokes (clear, drop, smash), serves, net play; Court dimensions; Scoring system; Game strategies
2	Ball Games IV - Tennis and Others	Tennis basics - grip, groundstrokes, volleys, serves; Court layout; Scoring system; Introduction to squash; Introduction to hockey; Rules and basic techniques; Sportsmanship and fair play in all ball games; Organizing mini-tournaments
3	Indigenous Games I	Nigerian traditional games - Ayo (Oware), Ludo, Draft (Checkers), wrestling, stick fighting; Cultural significance; Rules and gameplay; Traditional sports - wrestling styles from different ethnic groups; Preservation of cultural heritage through games
4	Indigenous Games II	More traditional games - hide and seek variations, skipping rope games, hopscotch (Suwe), ten-ten, catcher; Regional games from Nigeria; Games from different cultures; Social benefits of traditional games; Creating new games; Community and team building
5	MIDTERM EXAMINATION	Assessment of topics covered in weeks 1-4
6	MIDTERM BREAK	Rest and relaxation period
7	Use of Medicine I	Understanding medicine and drugs; Types of medicines - prescription, over-the-counter, herbal/traditional; How medicines work in the body; Reading medicine labels; Dosage and instructions; Medicine safety - child-proof caps, storage; Expiry dates
8	Use of Medicine II	Appropriate use of medicines; When to take medicine;

		Following doctor's prescriptions; Dangers of self-medication; Medicine interactions; Allergies and side effects; When to seek medical help; The role of pharmacists; Responsible medicine use
9	Effects of Drug Abuse I	Understanding drug abuse and substance abuse; Types of commonly abused drugs - alcohol, tobacco, cannabis (marijuana), cocaine, heroin, inhalants; Prescription drug abuse; Why people abuse drugs - peer pressure, curiosity, stress, family problems, availability
10	Effects of Drug Abuse II	Physical effects of drug abuse - damage to organs (liver, lungs, brain, heart), addiction, overdose, diseases (HIV/AIDS, hepatitis), mental health issues; Social effects - family breakdown, poor school performance, crime, poverty; Psychological effects - depression, anxiety, paranoia; Economic costs
11	Effects of Drug Abuse III & Health and Wellness	Prevention strategies - saying no, choosing good friends, stress management, goal setting, seeking help; Treatment and rehabilitation; Support systems; Living a drug-free life; Comprehensive health review - nutrition, exercise, mental health, sleep, hygiene; Preparing for secondary school; Lifelong fitness and healthy habits
12	EXAMINATION	End of term and final primary school assessment - theory and practical
13	CLOSING	Graduation ceremony; Report cards; Secondary school preparation; Celebration of achievements

PRIMARY 5 PHYSICAL AND HEALTH EDUCATION LESSON NOTES

THIRD TERM

WEEK 1: BALL GAMES IV - VOLLEYBALL

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. Describe the volleyball court and the position of the net.
2. State two basic rules of volleyball.
3. Demonstrate the correct technique for serving the ball (underhand).
4. Explain the rotation system in volleyball.

CONTENT

1. Volleyball Court and Net

Volleyball is a game played by two teams separated by a high net.

- **The Court:** It is a rectangle divided into two equal squares by a centerline. Each side is one team's court. The court has a front row (near the net) and a back row.
- **The Net:** A tall net is stretched tightly across the center of the court. For men, it is about 2.43 meters high; for women and children, it is lower. The ball must go over this net during play.

2. Basic Rules

- **Team Size:** Each team has 6 players on the court at one time.
- **Three-Touch Rule:** Your team can touch the ball a maximum of three times before sending it back over the net. The usual pattern is: Bump (first touch) -> Set (second touch) -> Spike (third touch).
- **Double Touch:** The same player cannot hit the ball two times in a row (unless the first touch was a block at the net).

- **Scoring:** A point is scored every time the ball hits the ground inside the opponent's court, or if the opponent makes a mistake (like hitting the ball out, into the net, or more than three touches).

Underhand Serve

1. Stance

Stance with ball held out.

2. Swing Back

Arm swings back.

3. Hit & Follow Through

Contact & Follow Through.

3. Basic Skills: Serving and Passing

- **Serving:** This is the act of putting the ball into play from behind the back line.
 - **Underhand Serve (Beginner Friendly):** i. Stand facing the net, one foot slightly in front. ii. Hold the ball in your non-hitting hand, straight out in front of you. iii. Make a fist with your hitting hand or keep it flat. iv. Swing your hitting arm back like a pendulum, then forward to strike the bottom of the ball with the heel of your hand. v. Release the ball as you swing, sending it up and over the net.
- **Passing:**
 - **Bump (Forearm Pass):** This is for low balls. Join your hands together, thumbs parallel and pointing down. Keep your arms straight to form a platform with your

forearms. Use your legs to push, not just your arms, to direct the ball to your setter.

- **Set (Overhead Pass):** This is for high balls. Shape your hands above your forehead like you're holding a big ball (thumbs and index fingers form a triangle). Use your fingertips (not palms) to push the ball high into the air, usually towards a teammate who will spike it.

4. Rotation System

Players rotate positions clockwise each time their team wins the right to serve back from the opponent.

- **Why?** This ensures all players get to play in both the front row (for blocking and spiking) and the back row (for digging and serving). It makes the game fair and teaches all skills.
- **How:** Imagine six positions on the court like numbers on a clock face. When you rotate, you move one "spot" to the right.

EVALUATION

1. How many players from one team are on the court during a volleyball game?
2. What is the maximum number of times your team can touch the ball before it must go over the net?
3. When serving, from where on the court must you stand?
4. Describe the hand position for the "bump" pass.
5. If you are in Position 1 (back right) and your team wins the serve, which position do you rotate to next?

ASSIGNMENT

1. **(Drawing):** Draw a volleyball court. Label the net, the centerline, and the service area.
2. **(Practical):** Practice the "bump" hand and arm position (joining forearms together) without a ball 20 times at home.
3. **(Written):** List two main differences between Football and Volleyball (e.g., use of hands vs. feet, net vs. goal).

WEEK 2: BALL GAMES V - HANDBALL

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. Describe the handball court markings, especially the goal area.
2. Identify the basic positions in a handball team.
3. Demonstrate dribbling and passing skills in handball.
4. Explain the role of the goalkeeper.

CONTENT

1. Handball Court Markings

Handball is a fast-paced game like football, but played with the hands.

- **The Court:** It is a large rectangle, bigger than a basketball court but smaller than a football field.
- **Key Marking - The Goal Area (The "D" or "6-meter line"):** This is a semi-circle painted in front of each goal. It is a very important rule: Only the goalkeeper is allowed inside this area. Field players can jump into the area to shoot, but they must release the ball before they land inside it.

2. Basic Rules and Positions

- **Team Size:** 7 players per team (1 goalkeeper + 6 field players).
- **Movement with the Ball:** A player can take only 3 steps while holding the ball. After that, they must dribble (bounce it), pass, or shoot. You cannot double dribble (stop and start dribbling again).
- **Positions:**
 - **Goalkeeper:** Defends the goal.
 - **Circle Runner/Pivot:** Plays near the opponent's goal area, tries to receive passes and shoot.
 - **Backcourt Players (Left, Center, Right):** They are the main playmakers and shoot from far.
 - **Wingers (Left and Right):** Play on the sides, are usually very fast.

3. Skills: Dribbling, Passing, Shooting

- **Dribbling:** Similar to basketball but with more open hand contact. Bounce the ball while running to cover more than 3 steps.
- **Passing:** Quick, sharp throws to teammates. The shoulder pass is most common: hold the ball above your shoulder and throw it like a fast cricket bowl.
- **Shooting:** The goal is to throw the ball past the goalkeeper. Players often jump high to get a better angle. The jump shot is very exciting to watch.

4. Goalkeeping Basics

The goalkeeper has a special and very important job:

- They are the only player allowed to touch the ball with their feet, but only inside their own goal area.
- Their main task is to block shots using their hands, feet, and body.
- They wear different colored jersey from the rest of the team.

EVALUATION

1. How many field players are in a handball team?
2. What is the special rule about the semi-circle area in front of the goal?
3. How many steps can you take while holding the ball without dribbling?
4. What is the main job of the goalkeeper?
5. If a field player steps into the goal area to block a shot, what will the referee call?

ASSIGNMENT

1. **(Drawing):** Draw a handball goal post with the net and show the semi-circular goal area line in front of it.
2. **(Written):** List the three basic skills used in handball (dribbling, passing, shooting) and give a short description of one.
3. **(Practical):** Find any ball at home. Practice taking only three steps, then dribbling it three times, then picking it up and taking another three steps, mimicking the handball rule.

WEEK 3: BALL GAMES VI - GAME STRATEGIES AND SPORTSMANSHIP

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. Explain the importance of teamwork in ball games.
2. Describe basic tactics for attacking and defending.
3. Define sportsmanship and fair play.
4. State the role of an official (referee/umpire).

CONTENT

1. Teamwork

No single player, no matter how good, can win a team game alone. Teamwork is players working together like parts of one body to achieve a common goal.

- It involves passing to a teammate who is in a better position.
- It means communicating on the field ("Man on!", "I'm open!", "Time!").
- It includes encouraging others after a mistake, not shouting at them.
- **Example:** In football, a midfielder wins the ball, passes to a winger, who crosses it for a striker to score. That's teamwork.

2. Basic Tactics: Attack and Defense

- **Attacking Strategy (When Your Team Has the Ball):**
 - **Create Space:** Players should spread out, not crowd together. This makes it harder to defend.
 - **Movement:** Players without the ball should not stand still. They should run into open spaces to receive a pass.
 - **Quick Passing:** Moving the ball quickly between players is often better than one player trying to dribble through everyone.
- **Defending Strategy (When the Other Team Has the Ball):**
 - **Marking:** Stay close to an opponent so they cannot receive the ball easily.

- **Positioning:** Get between your opponent and your own goal.
- **Communication:** Talk to each other! ("You take number 10!", "I'll cover the runner!").

3. Sportsmanship and Fair Play

Sportsmanship is about how you behave when you play, win, or lose. It shows your true character.

- **Good Sportsmanship Includes:**
 - Shaking hands with opponents before and after the game.
 - Accepting the referee's decision without arguing or cheating.
 - Helping an injured player from either team.
 - Congratulating the winner if you lose, and being humble if you win.
- **Fair Play** means playing by the rules and respecting everyone involved—opponents, teammates, referees, and coaches.

4. Rules and Officiating

The **Referee (or Umpire)** is like a teacher on the field. Their job is crucial:

- To enforce the rules of the game to keep it fair.
- To ensure the safety of all players.
- To be the final decision-maker on any dispute during the game.
- Players must show respect to the official, even if they disagree with a call.

EVALUATION

1. Why is passing the ball often better than trying to dribble past everyone?
2. If you are defending, what is the best place to stand relative to your opponent and your goal?
3. What should you do at the end of a game, whether you win or lose, to show good sportsmanship?
4. Give one example of "fair play" during a match.

5. Who is responsible for making sure the game is played safely and according to the rules?

ASSIGNMENT

1. **(Creative Writing):** Write a short story (4-5 sentences) about a player who helped an opponent who was injured during a match.
2. **(Written):** List two qualities of a good team player (e.g., communicates with others, encourages teammates).
3. **(Drawing):** Draw a picture of a referee. Include a whistle and a uniform that is different from both teams' colors.

WEEK 4: PATHOGENS AND DISEASES I

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. Define pathogens.
2. List four types of pathogens (bacteria, viruses, fungi, protozoa).
3. Explain simply how pathogens cause diseases.
4. Describe three ways diseases spread.

CONTENT

1. Meaning of Pathogens

Pathogens are very tiny living things (microorganisms or germs) that can cause sickness (disease) when they get inside our bodies. They are so small you need a microscope to see them. Not all tiny organisms are harmful, but pathogens are the "bad guys."

2. Types of Pathogens

Think of them as four different types of "germ enemies."

- **Bacteria:** Single-celled organisms. Some are good (like in our stomach), but harmful ones cause diseases like Typhoid, Cholera, and Sore Throat. They can often be treated with antibiotics.
- **Viruses:** Even smaller than bacteria. They cannot live on their own; they invade our healthy cells and use them to make more viruses. They cause Common Cold, Flu, Measles, Chickenpox, and HIV/AIDS. Antibiotics do not work against viruses.
- **Fungi:** These are like tiny plants (molds, yeasts). They love warm, moist places. They cause skin infections like Ringworm and Athlete's Foot.
- **Protozoa:** Tiny, single-celled animals. They often live in water. They cause diseases like Malaria and Dysentery.

3. How Pathogens Cause Disease

1. **Entry:** They enter our body through our mouth (food/water), nose (air), cuts in the skin, or through insect bites.
2. **Attack & Multiply:** Once inside, they attack our body's cells. They use the cells' resources to make millions more copies of themselves.
3. **Damage:** As they multiply, they either destroy our cells or produce poisonous waste called toxins. This damage is what makes us feel sick with symptoms like fever, pain, cough, or diarrhea.

4. How Diseases Spread (Modes of Transmission)

Diseases can travel from an infected person or thing to a healthy person in different ways:

- **Airborne Transmission:** When an infected person coughs or sneezes, tiny droplets containing germs fly through the air. If you breathe them in, you can get sick. (e.g., Flu, Tuberculosis).
- **Waterborne Transmission:** Drinking or using water that is contaminated with human or animal waste. (e.g., Cholera, Typhoid).
- **Contact Transmission:**

- **Direct Contact:** Touching, kissing, or holding hands with a sick person (e.g., Chickenpox, Ringworm).
- **Indirect Contact:** Touching a contaminated surface like a door handle, towel, or toy that a sick person used.
- **Vector-borne Transmission:** A vector is an animal (usually an insect) that carries the pathogen from one person to another without getting sick itself.
 - **Example:** The female Anopheles mosquito is the vector for Malaria. It bites a sick person, sucks up the malaria parasite, and then injects it into a healthy person when it bites again.

EVALUATION

1. What are pathogens?
2. Which type of pathogen causes the common cold and flu?
3. What is the name of the insect that acts as a vector for malaria?
4. How can a disease spread through the air? Give an example.
5. True or False: Drinking dirty, untreated water is a common way to get sick.

ASSIGNMENT

1. **(Written):** List three diseases that are caused by viruses.
2. **(Drawing):** Draw a picture of a mosquito (a common vector). Label it "Malaria Vector."
3. **(Practical/Oral):** With an adult's help, name one thing you can do at home to prevent waterborne diseases (e.g., boiling water, using a water filter). Share this with your family.

WEEK 5 & 6: MIDTERM EXAMINATION AND BREAK

WEEK 7: DISEASES II - COMMON COMMUNICABLE DISEASES

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. Define communicable diseases.
2. State the cause, symptoms, and prevention of Malaria.
3. Identify symptoms of Typhoid and Cholera.
4. Mention prevention methods for common cold and measles.

CONTENT

1. Communicable Diseases

These are diseases that can be passed from one person to another, or from an animal/insect to a person. They are also called infectious or contagious diseases. The pathogens we learned about cause these diseases.

Preventive Measures

Malaria

Use Bed Nets

Cholera / Typhoid

Wash Hands

Measles

Get Vaccinated

2. Malaria

- **Cause:** A protozoan parasite called Plasmodium. It is carried and spread by the female Anopheles mosquito.
- **Symptoms:**
 - High fever that comes and goes (hot and cold body).
 - Severe headache and body aches.
 - Chills and sweating.
 - Vomiting and feeling very weak.
- **Prevention (Fight the Mosquito!):** a. Sleep under a Long-Lasting Insecticidal Net (LLIN) every night. b. Clear Stagnant Water around the home (in old tires, cans, gutters) where mosquitoes breed. c. Use window and door nets/screens. d. Wear long sleeves and trousers in the evening. e. Use recommended anti-malarial medicine if prescribed by a doctor.

3. Typhoid Fever and Cholera

These are both caused by bacteria from contaminated food or water.

- **Typhoid Fever:**
 - **Symptoms:** Very high and persistent fever, stomach pain, headache, weakness, sometimes a rash.
 - **Prevention:** Cook food thoroughly, drink safe water (boiled or treated), wash hands with soap, get vaccinated.
- **Cholera:**
 - **Symptoms:** Sudden, severe watery diarrhea (like "rice water"), vomiting, rapid dehydration (loss of body water) which can be deadly if not treated quickly.
 - **Prevention:** Drink and use safe water, wash hands with soap, use toilets, cook food well, wash fruits/vegetables with safe water.

4. Common Cold, Flu, and Measles

- **Common Cold/Flu:** Caused by different viruses.

- **Symptoms:** Runny or stuffy nose, sneezing, sore throat, cough, mild fever.
- **Prevention:** Wash hands often, avoid touching face, cover mouth when coughing/sneezing (use elbow, not hand), avoid close contact with sick people.
- **Measles/Chickenpox:** Caused by highly contagious viruses.
 - **Symptoms:** High fever followed by a red rash that spreads over the body, cough, runny nose.
 - **Prevention:** VACCINATION (Immunization) is the most effective way. It is safe and protects you for life. Keep vaccination cards safe.

EVALUATION

1. What does "communicable" mean?
2. Name the insect responsible for spreading malaria.
3. What are two key symptoms of malaria?
4. How is cholera mainly spread, and what is its most dangerous symptom?
5. What is the single best way to prevent measles?

ASSIGNMENT

1. **(Drawing):** Draw a picture showing a child sleeping safely under a mosquito net.
2. **(Written):** Create a short list of "3 Do's for Healthy Water": Write three things you should do to make sure your drinking water is safe.
3. **(Oral/Practical):** Ask your parents to see your immunization card. With their help, check if you have received the measles vaccine. Report what you find to the class (anonymously).

WEEK 8: DISEASES III - NON-COMMUNICABLE DISEASES

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. Define non-communicable diseases.
2. Mention three examples of non-communicable diseases.
3. Explain simply what Diabetes and Hypertension are.
4. Identify lifestyle habits that prevent these diseases.

CONTENT

1. Meaning of Non-Communicable Diseases (NCDs)

These are diseases that are NOT spread from person to person. You cannot "catch" them like a cold. They are often long-lasting and develop over time. Main causes include:

- Unhealthy Lifestyle (Poor diet, lack of exercise, smoking).
- Genetics (Inherited from parents, like Sickle Cell).
- Environmental factors (like air pollution).

2. Common Examples

- **Diabetes:** The body has trouble using a sugar called glucose for energy. Either it doesn't make enough insulin (a key that lets sugar into cells) or the insulin doesn't work well. This causes too much sugar in the blood, which can damage organs.
 - **Signs:** Feeling very thirsty, urinating a lot, feeling very tired, blurred vision.
- **Hypertension (High Blood Pressure):** This is when the force of blood against the walls of your arteries is too high all the time. It makes the heart work too hard. It is called a "silent killer" because it often has no obvious symptoms until it causes serious problems like a stroke or heart attack.
- **Asthma:** A condition where the airways in the lungs become narrow, swollen, and produce extra mucus, making it hard to breathe.
 - **Triggers:** Dust, smoke, pollen, cold air, exercise.

- **Sickle Cell Disease:** An inherited blood disorder where red blood cells are shaped like a crescent (sickle) instead of round. These cells get stuck, blocking blood flow and causing pain and anemia.
- **Cancer:** When some cells in the body grow out of control and spread to other parts, forming lumps called tumors.

3. Lifestyle and Prevention

Many NCDs are linked to our daily choices. We can prevent them by building healthy habits early.

- **Prevention Strategies:**
 - **Eat Healthy:** Eat plenty of fruits, vegetables, and whole grains. Reduce sugar (in sweets, soda) and salt (in canned foods, fast food).
 - **Be Active:** Exercise regularly (at least 60 minutes of play daily). Avoid sitting for too long watching TV or playing video games.
 - **Avoid Harmful Substances:** Do not smoke. Do not drink alcohol.
 - **Maintain a Healthy Weight.**
 - **Regular Check-ups:** Visit a clinic for checks, even when you feel well.
- **Sickle Cell Awareness:** It is important for adults to know their genotype before having children to understand the risk of passing on Sickle Cell Disease.

EVALUATION

1. Can you get diabetes from sharing a drink with a friend who has it? Why or why not?
2. What is the common name for Hypertension?
3. What happens inside the body of a person having an asthma attack?
4. Name two healthy food choices that can help prevent non-communicable diseases.
5. Is Sickle Cell Disease contagious? How is it passed on?
6. Why is smoking dangerous for your heart and lungs?

ASSIGNMENT

1. **(Written):** List three examples of non-communicable diseases.
2. **(Written):** What are two things a person with asthma should try to avoid? (e.g., dust, smoke).
3. **(Creative):** Create a small "Healthy Heart" poster. Draw someone exercising (like jumping rope) and eating an apple. Write a slogan like "Move Your Body, Love Your Heart!"

WEEK 9: DISEASE PREVENTION AND CONTROL

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. Explain the importance of personal hygiene in disease prevention.
2. Define environmental sanitation.
3. State the importance of immunization.
4. Demonstrate correct hand-washing technique.

CONTENT

1. Personal Hygiene

This means keeping your own body clean to prevent germs from entering and making you sick. It is your first line of defense.

- Bathe daily with soap and water to wash away germs and sweat.
- Brush your teeth at least twice a day to prevent tooth decay and bad breath.
- Wash your hair regularly.
- Keep nails short and clean so dirt and germs don't hide under them.
- Wear clean clothes every day.

2. Hand Washing - The Most Important Habit!

Our hands touch everything and can pick up thousands of germs.

- **When to Wash Hands:** a. Before eating or preparing food. b. After using the toilet. c. After playing outside or with pets. d. After coughing, sneezing, or blowing your nose. e. After touching a sick person.
- **Correct Technique (Use soap and running water):** a. Wet your hands. b. Lather with soap, covering all surfaces (front, back, between fingers, under nails). c. Scrub for at least 20 seconds (sing the "Happy Birthday" song twice!). d. Rinse well under clean, running water. e. Dry with a clean towel or air dry.

Steps for Proper Handwashing

3. Environmental Sanitation

This means keeping our surroundings clean to destroy breeding grounds for germs and vectors (like mosquitoes and flies).

- **Proper Waste Disposal:** Put rubbish in covered bins. Do not dump refuse on the street or in gutters.
- **Clear Drains and Gutters:** Prevent stagnant water where mosquitoes breed.
- **Cut Tall Grasses:** Around the home to keep away snakes and reduce hiding places for mosquitoes.
- **Keep Toilets Clean:** Use toilets and keep them clean. Defecating in the open (open defecation) spreads diseases like cholera.

4. Immunization and Vaccination

- **What it is:** A vaccine is a safe substance that teaches your body's immune system how to recognize and fight a specific germ without actually making you sick.

- **Importance:** It is the best protection against many dangerous diseases. It protects you and also helps protect the whole community (called herd immunity) by stopping the spread.
- **Examples:** Vaccines protect against Polio, Measles, Tetanus, Yellow Fever, Tuberculosis (BCG), Hepatitis B.
- **Remember:** Always keep your immunization card safe and take it with you to every clinic visit.

EVALUATION

1. Why is it important to take a bath every day?
2. Name two specific times when you must wash your hands.
3. How long should you scrub your hands with soap?
4. What is the main purpose of cutting tall grasses around our homes?
5. What does a vaccine do inside your body?

ASSIGNMENT

1. **(Drawing):** Draw a picture of a child washing their hands correctly at a tap. Label the soap and water.
2. **(Practical/Written):** List three tools used to keep the environment clean (e.g., broom, rake, dustpan). Use one this week to help clean your compound and write about it.
3. **(Creative):** Create a short, catchy slogan about cleanliness (e.g., "Clean Hands, Healthy Life!" or "Keep Your Surroundings Clean, Keep Sickness Away!").

WEEK 10: PHYSICAL ACTIVITY, HEALTH AND WELLNESS

OBJECTIVES

By the end of the lesson, pupils should be able to:

1. List three benefits of regular physical activity.
2. Explain the connection between exercise and mental health.
3. Create a simple personal fitness plan.
4. Identify active lifestyle choices vs. sedentary ones.

CONTENT

1. Benefits of Physical Activity

Moving your body regularly is like giving it a "tune-up." The benefits are for your whole self:

- **Physical Benefits:**
 - **Stronger Muscles and Bones:** For climbing, lifting, and growth.
 - **Healthy Heart and Lungs:** Improves endurance and reduces disease risk.
 - **Healthy Weight:** Burns calories and prevents obesity.
 - **More Energy:** It may sound strange, but exercise gives you more energy for your day!
- **Mental/Emotional Benefits:**
 - **Better Mood:** Exercise releases chemicals called endorphins that make you feel happy and reduce stress.
 - **Better Sleep:** Helps you fall asleep faster and sleep more soundly.
 - **Sharper Mind:** Improves concentration, memory, and learning in school.
 - **More Confidence:** Getting stronger and learning new skills makes you feel good about yourself.

2. Active vs. Sedentary Lifestyle

- **Active Lifestyle:** Your day includes lots of movement.

- **Examples:** Walking or cycling to school, playing games outside, helping with chores (sweeping, fetching water), dancing, sports practice.
- **Sedentary Lifestyle:** You spend most of your time sitting or lying down with little movement.
 - **Examples:** Watching TV for hours, playing video games or on phones/tablets for long periods, sitting in a car for short trips you could walk.
 - **Risk:** A sedentary lifestyle leads to weak muscles, poor posture, weight gain, and poor health.

3. Creating a Personal Fitness Plan

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday

Everyone should aim for at least 60 minutes of moderate to vigorous physical activity every day. It doesn't have to be all at once!

- **Sample Weekly Plan for a Pupil:**
 - **Monday:** 30 mins of football after school + active chores.
 - **Tuesday:** 20 mins of skipping rope + walk to a friend's house.

- **Wednesday:** 30 mins of dancing to music.
- **Thursday:** Physical Education (P.E.) class at school + help wash the car.
- **Friday:** 40 mins of playing tag or other running games with siblings/friends.
- **Saturday:** Family outing to the park or a long walk.
- **Sunday:** Rest or gentle play.

EVALUATION

1. How does regular exercise help your heart?
2. What is one way that physical activity can help you do better in your school work?
3. Give an example of a "sedentary" activity that should be limited.
4. What is the recommended minimum amount of daily physical activity for children?
5. Is helping to fetch water or sweep the compound a form of physical activity? Why?

ASSIGNMENT

1. **(Written):** Create your own simple fitness plan for next week (Monday to Friday). Write down one activity you will do each day.
2. **(Written):** List two physical activities that you enjoy doing that also make you sweat and breathe harder.
3. **(Creative Writing):** Write one sentence explaining why spending too much time watching television is not good for your health.

WEEK 11: REVISION

CONTENT

- **Review of Ball Games:** Volleyball (court, 3-touch rule, underhand serve). Handball (goal area rule, 3-step rule, positions). Game Strategies and Sportsmanship (teamwork, tactics, fair play).
- **Review of Pathogens and Diseases:** Types of pathogens. Communicable diseases (Malaria, Cholera, prevention). Non-communicable diseases (Diabetes, Asthma, lifestyle prevention).
- **Review of Prevention and Control:** Personal hygiene, proper handwashing steps, environmental sanitation, importance of immunization.
- **Review of Physical Activity:** Benefits for body and mind, active vs. sedentary lifestyle, creating a fitness plan.
- **Practical Demonstration:** Teacher will lead a demonstration of proper handwashing technique and a 5-minute fitness circuit including jumping jacks (cardio), squats (strength), and stretching (flexibility).
- **Question and Answer Session:** Comprehensive review session where pupils can ask final questions. Teacher will conduct oral quizzes and practice tests to prepare pupils for the final examination.
